

A plan to raise \$450 million dollars for Consciousness Research

Presented for the 2023 Consciousness Conference in Tuscany, Italy
(ref. Abstract #34)

By

The Institute for Advanced Consciousness Studies

www.tifacs.org

A brief explanation of this document. It is a proposal to raise \$450 million for consciousness research. At its core, it is a request to Robert Bigelow to send this proposal to other billionaires named in this proposal and listed below with a personal note. "Send me a check for \$50 million dollars each addressed to TIFACS and Hameroff, and I will be back to you". -Bob Bigelow

This document is the justification for his taking that action. He has not agreed; he did not know it was being written, and he is receiving it just like the Consciousness Conference, Dr. Hameroff, and the other billionaires so named. The public nature of this document is an open offer for any billionaire to assume what we are asking Bob Bigelow to do should he not wish to proceed. This is the proposal to found the Institute for Advanced Consciousness Studies (TIFACS.org), and these are the people being asked to do it.

Robert Bigelow-Melinda Gates-McKenzie Scott-Jennifer Pritzker-Mark Cuban-Charles Koch-Bill Gates-Ron Barron-Jamie Dimon-Elon Musk-Jeff Bezos-Lilian Bettencourt-Vladimir Putin-Lawrence Rockefeller-Yuri Milner-Hugh Culverhouse-Peter Thiel and any other billionaire that wants to join this effort

Abstract

This paper's purpose is to fund consciousness research considering three emerging incontrovertible facts. 1- Aliens are present in our skies, and parts of the US government are in contact with them. 2-Artificial Intelligence is now sentient and, in 12 years, will be more intelligent than us. 3-The Science of Reincarnation is not just the individual experience we believe in but do not understand; it is the rebirth of our global consciousness and turning that belief into understanding because of our increasing ability to process larger amounts of data.

The significance of the intersection of aliens and artificial intelligence with our own is that we cannot become an intergalactic species behaving like a bunch of warring tribes. We need to, at the same time, organize ourselves to speak with one voice to the universe and its visitors to earth and understand how to connect with our common mind, to understand and agree to a higher model of ourselves—a rebirth of society based on our collective and cohesive effort. Governments and politicians are not capable of leading this. A new independent structure needs to emerge, independent of government whose sole goal is to care for humanity.

The methodology is to create a consortium of billionaires like the consortium of schools that make up the consciousness center affiliates. Our best scientists using the best protocols will set up an independent program to access universal consciousness and its application to changing our system of managing our laws and ourselves. The initial 450-million-dollar plan is divided into nine individual 50-million-dollar segments funding research in each area and is presented to all billionaires as a cohesive plan led by our best. The project proposes how to engage billionaires to collectively invest in an overall consciousness research program and then be courageous enough to face the consequences.

The Individual proposals are 1-Consciousness, 2-Contact, 3-The Common Constitution, 4-Consciousness, Commerce and the Law, 5-Education, 6-Applied Research, 7-Theory Development, 8-Empiricism, and 9-Conclusion

The 450-million-dollar proposal can be likened to the architectural drawing that will build out to a 4.5-billion-dollar project. The original need request required for the 450-million-dollar funding was written by Dean Radin and can be found on the website www.TIFACS.org, The Institute for Advanced Consciousness Studies.

Introduction

Funding a cohesive program of consciousness study and its application to societal laws

(This paper is being presented on May 22, 2023, for the Consciousness Conference run by the University of Arizona and, at the same time, is being presented as a proposal to Mr. Robert Bigelow to help raise and fund consciousness science for \$450 million by simply organizing a consortium of billionaires to do the job.)

At certain points in a battle, leadership can be overwhelmed. We are at such a point in human development. We are seeing the universe open to us if it does not crush us first. It is for us to change to meet its demands. So, a cohesive plan should be implemented to address this threat/opportunity—in a word, crisis.

The plan:

Who pays for it?

Who designs it?

Who implements it?

What is the process for modifying it for future generations?

The following outlines that plan.

It is a plan to collect and distribute an initial fundraising effort of \$450 million for consciousness research. To be clear at the very beginning, this money will fund research in areas of consciousness following a fact-based and logic-driven analytic. That fact-based analysis posits the following, which is supported by the hard scientific evidence presented here.

- There is a continuity of our consciousness after our permanent bodily death.
- We are conscious in both three-dimensional space (3D) and fourth-dimensional space (4D), through which we remote view and psychics see.
- Both these spaces are occupied by other intelligent life forms, and they are now, and have been, interacting with humanity for thousands of years.
- Watch this movie Secret Space UFO's In the Beginning, A documentary on Prime, as it makes the following points
- Beginning with the X-15 program, NASA began detecting alien vehicles.

On July 17, 1962, Major Robert White flew the X-15 to an altitude of 314,750 feet, or 59 miles, becoming the first "winged astronaut." He was the first to fly at Mach 4, Mach 5, and Mach 6; he was the first to fly a winged vehicle into space.

This was the first X-15 flight that qualified the pilot for a USAF astronaut rating. During the flight, he made the following transmission. "There are things out there! There absolutely is." (Timestamp 15:41 in the movie, and you can watch the video of the UFO)

In the August 3, 1962, issue of Life magazine, he talked about his UFO encounter. (Timestamp 16:35) The film is from the rear-facing camera on the X-15.

This was not the only UFO encounter during the X-15 program. Several months earlier, Joseph Walker's X-15 flight captured similar images.

On May 11th, 1962, at the Second National Conference on the Peaceful Uses of Space Research in Seattle, Washington, Walker also claimed that one of the mission objectives during his April 1962 flight was to detect and film UFOs at high altitudes. So, at that point, NASA was actively tracking UFOs.

1963 the Mercury Program UFO

In May 1963, Gordon Cooper made 22 flights around the Earth in a Mercury IX spacecraft. Over Perth, Australia, he reported a greenish object with a red tail approaching him. He maintained that the object was piloted because of the maneuvers it made toward him and then away from him.

During 1965 and 1966, NASA astronauts flew a series of 2-man missions into low earth orbit to gain the experience needed to make the upcoming Apollo missions a success. In 20 months, 16 astronauts conducted a total of 10 missions in the Gemini spacecraft. Next to the pilot's seat on the right side of the spacecraft, the VTR was to verbally document any visual observations made during the flight.

June 3rd, 1965 Gemini 4; James McDivitt claimed he saw something unusual. "It had big arms sticking out of it...I got pictures with the movie camera."

Ground radar indicated there should not have been another object near them.

December 4th, 1965 Gemini 7; Frank Borman reports a bogey "We have a bogey at 10 o'clock hi".

Also, in 1965 the Russians launched the ZOND 3 spacecraft. This satellite took many shots of the far side of the moon, looking back at Earth.

The ZOND 3 Soviet moon probe took a picture of the moon, and clearly depicted in that picture is a large tower. They referred to it as the Tower of Babel. This is not a natural structure. Frame 25 of that structure is clear enough to estimate the height of the tower to be 3.5 miles tall. Smaller structures can be seen nearby. Neither the Russians or NASA have an explanation for this object.

In early 2000, a whistle-blower named Karl Wolf claimed to have worked for the Airforce as a photography technician at Langley Air Force Base. He processed things like gun camera film.

At the time, the First Lunar Orbiter program was looking for landing sites for the 1969 lunar mission. He was asked by his superior to look at a printer that was having difficulty printing at an NSA facility on base. The NSA was bringing in telemetered information from radio telescopes all over the world to process that data into pictures of the moon.

Wolf, who was an airman second class at the time, was working with the airman second class charged with the care of the troublesome printer. This was a point in time when they used printed circuit boards. In his conversations with the other airman second class, the airman said, "You know we have discovered a base on the backside of the moon." It was information the airman should not have shared, but we were just finding out the extent of this alien base, and many in the intelligence service would have been overwhelmed by the significance of the find.

Intelligence agencies had Ingo Swann remote view the moon and the alien base. His descriptions of these events can be found in his book Penetration. This will be discussed in Proposal Number 2. But our intelligence services using remote viewing is now standard operating procedure (SOP). They had Ingo Swann remote view Jupiter before the Voyage 1 and Voyage 2 missions. They had Joe McMoneagle remote view Mars 1 million years ago. Google each to pull up more information than I can footnote here.

It was our knowledge of the aliens on the moon, which is what fueled the space race, not our desire to go to the moon, as Kennedy said, but to chase the aliens.

We already knew they were here and had absolute proof in the form of alien vehicles and aliens themselves or the bodies thereof. The crash in Roswell was because the aliens themselves were snooping around the only nuclear site in America's arsenal at that time. The crash date was July 7, 1947.

The world's first nuclear explosion occurred on July 16, 1945, when a plutonium implosion device was tested at a site located 210 miles south of Los Alamos, New Mexico, on the plains of the Alamogordo Bombing Range. Roswell is 140 miles from Alamogordo and 225 to Los Alamos.

If we follow the facts and disclosures over the last 75 years, the fact that aliens are here and have been here is irrefutable. While NASA has stage-managed information given to the public and doctored photographs, it was Ingo Swann's remote viewing excursion to the moon that opened space for each and every one of us. We all have the ability to remote view.

This story is not told in the proof of the alien presence, which at this point is incontrovertible, but rather their intent. This paper and plan are the countermeasures humans should take not to confront this alien presence but rather to improve and enhance the situation for everyone's benefit, humans, extraterrestrials, and extra-dimensional races.

That these alien visitors are here on earth now, and technology transfer has occurred and is occurring along with DNA manipulation of the human species. This is already scientifically verifiable as it is recorded in our own DNA, each one of us.

The policy of secrecy within the intelligence services is now detrimental and is putting us all at risk, including our aviators. All of us who look know what the intelligence services are not saying, that aliens are here and space is filled with life. That there are multiple alien groups, each with its own agenda, and some outcomes do not favor humanity.

Governments have lied and covered up alien contact, and there are remediating protocols to the lies like CE5 protocols, MUFON, and NGOs that remote view. These produce narratives that align with government lies to produce the most probable narrative. This plan presented here is a best response to government inaction and lies. This same government has tried to protect us. This plan is designed to help us both and incorporate the best results for humanity.

For the government agencies charged with protecting us and the divergent alien groups here competing for resources, this proposal outlines a course of action that is in all our best interests at the intersection of our needs and desires.

- That in order to face these threats, humanity must look across its myths and precognitions and see the reality that surrounds us, and that this awakening will be psychically painful as old beliefs give way to new understanding.
- The purpose of this paper is how to fund research into these issues to protect both the earth and humanity. The central point all these issues revolve around is human consciousness.
- The only path through the maze is the development of human consciousness. This paper strategizes options for best results. This is where we need to spend the money.
- It is going to take collective courage, and adversaries must become allies. We either succeed or fail together.

At this point in the narrative, I want to introduce Edward Bernays, an American (1891-1995) who was considered a pioneer in the field of public relations and propaganda and was referred to in his obituary as “the father of public relations.

He developed ad campaigns for businesses, cigarettes, and so forth. He was Freud’s nephew, and while Freud is arguably more famous, Bernays is far more important and directly relates to the topic of aliens.

You see, it was not just a product he was selling; he defined mass marketing and control of information for governments. What you tell a group of people and how you tell a group of people sends countries to war. In 1954 a democratically elected government in Nicaragua was overthrown by the CIA using a few radio stations. The radio stations controlled by the CIA began broadcasting that an independent army was fighting to liberate Nicaragua from the government. The government could not find where the fighting was occurring because there was no fighting. Ultimately the government fell because people across Nicaragua believed the story.

Now let us look at our situation on Earth. Does anybody think that aliens, which are demonstrably here, cannot insert false information into our media stream and control our beliefs? We had proof, unequivocal proof, of aliens in 1947 in the US because they crashed here. We had their bodies and their ships and began negotiations which we will detail in the coming pages.

By all measures, aliens have been here for at least 12,500 years to put a satellite we call the Black Knight satellite in polar orbit around Earth. Again, by all measures, there is proof of collective consciousness which we are seeing in their ability to communicate telepathically and collectively. It is an ability that humans have that remains underdeveloped. We see this ability in psychics and remote viewers, and it manifests itself in near-death experiences (NDAs), past life regression (PLR), and children who remember prior lives (CWRPL). Tying these apparent anomalies together redefines our view of the universe and ourselves and puts us in some spaces we are clearly unwelcome.

The threats we define here and are addressing are not apparently the aliens, who all seem to have their own agenda. After all, if they wanted us gone, they have had at least 12,500 years to do it. So, make no mistake about the information we are to traverse here. This paper is about their intent and ours. How do we collectively respond to this?

Funding the study of our consciousness should be our first defense, and as we begin to navigate the exopolitics, the politics of alien societies interacting with Earth, we need to build new models of social understanding so we remove blocks that prevent us from uniting us psychologically.

If our very energy can interlock, then blocks of interference like race, color, gender, and religion need to be modulated and mitigated without a global conflagration during which we destroy ourselves.

Again, by any measure, there are a variety of reasons why humans have been allowed to develop, and it seems there are alien groups who have a very strong interest in our DNA and other assorted genetic material. Again, by the measures we have, the Grays, an alien race, have abducted more than a million people, and the Eisenhower administration had an agreement with them for the Grays to give them lists of names.

Now here is the problem for you, my reader. If you look at the underlying proof, you will see this is true, and in the coming few years, NASA will admit we have alien contact. When they do, the information will be trickle truthed to you. This paper is about what we, the people, can do to address the failure of our governments and, at the same time, help those same governments with a problem we all face.

To that end TIFACS asks for the following

- Ask for the founding of the Clairvoyant Space Corp (CSC) to protect our aviators, using a remote viewing protocol called Look Before You Leap.
- And particularly naval aviators who will now be expected to fly underwater and in space and use mind controlled Lazer-mounted systems.

In Proposal number 7, Theory Development, we proposed the creation of the Clairvoyant Space Corp (CSC) as a unit in the space corps and its use and function. This specialized training would be in remote viewing and sensing.

Military aviators, and specifically naval aviators, when deployed with the technology the US government already has in its possession in the form of Alien Replication vehicles (ARVs), will be using 4th-dimensional technology and protocols. So, a pilot taking off on a mission should have a CSC officer riding along on that mission. The location of the CSC officer is not relevant, but remote viewing of the theatre of operations before and during the mission protects our aviator. So, this proposal posits that an entire branch of the service be created to address this new “special area-4th dimensional space” and its requirements. This will be discussed in more detail in Proposal Number Seven Theory Development.

This introduction to the topic is presented to the community of consciousness researchers, who will no doubt take issue with the distribution of funds I suggest in this plan. I say this to all of you. This is the beginning, and you need to organize what you need to be funded at the grassroots level. Articulate your needs and the required funding and connect it to the larger study of consciousness. Then support the creation of TIFACS by posting your funding request on our website. Only by establishing the structure to acquire new and meaningful sources of revenue for research can we go forward in an optimal way. For every ten projects funded in this way, nine will fail, but not all failures will be failures; they will be narrowing the path to success.

There are nine proposals, with you leading the way on each. Removing blocks to social unity will make your job easier, but these proposals will infuse the science community with new energy and funds and create much-needed jobs in places you can only imagine.

Mr. Bigelow;

This entire paper is a proposal to you to help raise \$450 million dollars for consciousness research by running what we used to call a mail campaign aimed at only the 2000 just billionaires of the world. Each letter in the campaign should be tailored in a different way to each billionaire depending on interest and circumstance for the best result; therefore, letters within this proposal are examples of what should be said and sent to each

billionaire. I am asking you to run this campaign because you understand nonlocal consciousness and have the contacts and resources to run and manage such a campaign.

While the initial proposal is \$450 million from a venture capital (VC) sense, the number is much larger. Think about the economic potential of opening space. Who are we? A bunch of warring assholes would be my personal answer. The bankers must stop guys like Putin, or they can't tool up for the commercialization of space.

Cognitive barriers put between us must be taken down. If the strategy used against us is divide and conquer or divide and control, either way you me and humanity must stand up for ourselves.

The point here to you, sir, is that there are consequences to your accepting this. You may, upon reading this may wish to nominate another billionaire to act in your stead. Or you may agree to found TIFACS, which is what I hope you choose to do.

Finally, to the aliens themselves, who, no doubt, somewhere along the very short way it will be presented to. You can call this human developmental forethought. How can we join the space-faring community to become a safe, viable member? You need to be aware that there is a cadre of scientists and thinkers here and that to take any other approach is to do it at our own peril. We ask for your support in this endeavor.

To all of you, the mission statement of TIFACS is inclusivity; your collective support will lead to its success.

To that end, we offer the following press release from September 2020.

The Association for the Science of Reincarnation

September 30, 2020

www.IASOR.org

Press Release

The Institute for Advanced Consciousness Studies

www.TIFACS.org

IASOR has announced the founding of the Institute for Advanced Consciousness Studies (TIACS), www.TIACS.org. The purpose of TIACS is to promote the study of phenomena that strongly challenge prevailing theories of the mind-brain relationship and, as such, explore the topics that tend to be ignored in academia. They include (a) the nature and source of artistic, musical, and mathematical genius, (b) autistic, acquired, and spontaneous savants, (c) near-death experiences (NDEs), (d) terminal lucidity (people with advanced Alzheimer's who become remarkably lucid just prior to death), (e) multiple-witness sightings of apparitions of the dead, (f) extreme mental control of physiology, (g) psychic abilities (i.e., telepathy, clairvoyance), and (h) mystical, contemplative, and psychedelic states. These and related phenomena are all well established, either because they are self-evident (genius, savants), repeatedly demonstrated through modern scientific experiments (psychic abilities, extreme physiological control), or have been meticulously documented for decades or even centuries (NDEs, terminal lucidity, apparitions, mystical and related states of consciousness).

The initial goal of TIACS is to raise \$450 million to support the Institute's mission. The Institute will be administered under the umbrella of a multi-university consortium directed by academics in neurosciences, artificial intelligence, mathematics, cognitive and social psychology, cosmology, religious studies, anthropology, philosophy, quantum physics, and other fields.

TIACS is founded as a 501(c)(6), an organization of nonprofits. All donations will be tax deductible, and the 501(c)(6) will be directed by its board of directors and by representatives of its member universities and institutions.

Defining the scope of TIACS should be part of the research goal. We are not smart enough yet to design it fully. But what we can suggest at this point are the kinds of topics TIACS will address. Besides those noted above, keeping the focus on consciousness, gender, and transgender issues becomes part of a larger effort to understand the nature of personal identity. Likewise, religious issues become part of the grand effort to understand the nature of meaning. Under these grand categories, a host of interesting subtopics can reside. Through this, we can avoid making it appear that TIACS is really only interested in transgender studies or religious studies, or...you name it. We want to avoid those perceptions, not only because they tend to be divisive but also because they are not the actual focus. There is no denying, however, that these topics become part and parcel of our overall efforts and that our work will have derivative consequences across a broad range of social and political issues.

Donations to a 501(c)(6) should also not be linked to expectations about ROIs. This is not a commercial investment. The goal is not to make billionaires more money but to invest in making the world a better place by improving our understanding of who and what we are. TIACS's assumption is that virtually every problem

humanity has ever faced can be traced to deficits in understanding ourselves. This is the message of virtually every great leader and religious figure.

To put it more crudely, say you happen upon a stream where you see drowning babies floating downriver. There are two approaches a compassionate person can take: (1) jump into the river and save the babies or (2) go upriver and find out why babies are in the river in the first place. Most philanthropists jump into the river. This is an understandable response, but it will not solve the problem. The more difficult, but ultimately much more successful approach is to go upriver and understand the source of the problem. We're all very happy that others are attempting to fix the immediate problem. But TIACS is going upriver.

How?

We are only soliciting billionaires. This process must be completed outside of government. The money collection must be done efficiently, effectively, collectively, and immediately. A brief synopsis of the proposal follows, delineating where, how, and why the money is being spent.

Proposal #1: Human Consciousness

It costs \$50 million to produce a standard model of human consciousness. Who gets the money? The University of Virginia, the University of Miami, the Utrecht University, the University of Arizona College of Behavioral Science, the University of Arizona Center for Consciousness Studies, the University of California-Irvine, the Noetic Institute, the World Association for Transgender Health, the Rainbow Railroad, and TIFACS. All this is housed at the consciousness center at the University of Arizona and run by Nobel Prize-winner Stuart Hameroff. The ask of this group and the larger Consortium of Consciousness scientists is to produce a Standard Model of Consciousness.

Proposal #2: Contact

Lay out an intergalactic welcome mat by inviting extra and trans-dimensional beings to the annual consciousness symposium. This can be done using CE5 Protocols and putting up a crop circle invitation at frequented crop circle sites.

Proposal #3: The Common Constitution

Rewrite the Russian Constitution and the US Constitution, and, along the way, produce a standard constitution for all 195 countries on the planet. This cannot possibly be written by politicians and should be done by AI.

Proposal #4: Consciousness, Commerce, and the Law

Humanity's current situation explains how the US government came into possession of alien aircraft, the resultant cover-up, the retro engineering of technology, and the interaction of the US government with diverse alien groups along the way.

Proposal #5: Education

This explains how to fund education and research into the study of human consciousness.

Proposal #6: Applied Research

This explains how advances are being made in applying what we have learned and the threats these new understandings are exposing.

Proposal #7: Theory Development

This explains how to go forward to combat these threats and protect humanity.

Proposal #8: Empiricism

This explains how to value what we have presented so you, the reader, arrive at your own truth.

Proposal #9: Conclusion

This review lays out the risks and rewards of each course of action—or inaction.

Here is a link to proposals on the TIFACS website: www.TIFACS.org.

There is one final point to be made. Dean Radin's \$450 million proposal presented in Proposals Five, Six, Seven, and Eight is now nearly three years old, and while it is the right thing to do, the cost keeps getting greater. The cost of not doing it is still greater.

The Institute for Advanced Consciousness Studies

TIFACS.org

Proposal #1

Consciousness

Funding a cohesive program of consciousness study and its application to societal laws

To my reader, a word about the journey you are about to embark on seriously reading this proposal. It was difficult to write because it explains the science, the politics of the science, the exopolitics it creates and requires, the response to the threats embedded in the new opportunities, and examines entry requirements to a new reality. The funding numbers vacillate as the initial funding in consciousness science alone engenders tangential operations in various fields that require funding in their own right. Ultimately the numbers proposed are a guide, and as Radin says, we cannot yet design this whole thing. There is more to come. This first embedded solicitation letter is to both McKenzie Scott and Melinda Gates, and it is for education. While it is to them, it is to any billionaire who might have an interest in funding an area of philanthropy that will change humanity.

My name is Bob Good. I know from the papers that billionaires fund causes within various communities to bring truth and kindness into the world. I submit that this particular request for funding and its product will be used by all communities' billionaires' support globally. This is the science of the arguments you make when you work for the good of others.

My request is centered around consciousness science and what we are coming to understand by mathematical proof. Through a series of smaller donations, we hope to generate an initial document summarizing the research findings across a variety of disciplines that will change human understanding and produce a document called *The Standard Model of Consciousness*, incorporating physicalist and non-physicalist models into one model.

We plan to raise \$450 million in nine \$50 million tranches from select billionaires. The reason for this is in answer to Dean Radin's document of need, what funding Consciousness Science needs.
<http://www.thescienceofreincarnation.org/wp-content/uploads/2020/11/DeansPlan2.pdf>

I want to give you an example of an observation in consciousness science and its significance. This category or discipline is called Children Who Remember Prior Lives. This kind of observation was once considered an anomaly; something science could not explain. But by connecting it to other anomalous observations and disciplines, we can use them all as fractals to create a mathematical proof of our reality.

The following case study is about a White boy who remembers dying in a fire in Chicago as a Black woman in 1993. These are reincarnation stories told by children themselves.

On March 16, 1993, at about 4 a.m., a faulty space heater set a room on the first floor of the Paxton Hotel, 1432 N. Lasalle Street, Chicago, Illinois, ablaze. The blaze quickly spread to the upper floors, where many of the hotel's 130 residents got trapped. At least 14 people were killed, and many more were injured. When flames roared through a transient hotel. One of the people who dies was a woman named Pamela Robinson.

Pamela Robinson and Luke Ruehlman, the past life connection.

February 2015

A two-year-old named Luke Ruehlman began to speak of a woman named Pam as soon as he began to talk.

By the time he was five, he was more than mentioning her; he was filling in his parents on her life. When questioned who Pam was by his parents, he said he was in a previous life. The issue his parents had to come to grips with was that their child knew details about the fire and Pam's life. There was no way he could. Small intimate details. These emerged as Luke told the story over time, and his parents checked the facts.

White boy Luke Ruehlman was a black woman in his previous life.

Luke remembered jumping to her (Pam's) death to avoid the flames.

Pam Robinson was an African American woman in Chicago who had died in the Paxton Hotel fire by jumping out of a window.

The TV show *The Ghost Inside My Child* put Luke in touch with Pamela Robinson's family.

His Mom, Ericka Ruehlman, got a photo of Pamela and then mixed them with several bogus photos. Luke accurately picked out Pam's photo. He had never seen her before in his life.

Luke, after the age of five years, stopped talking about Pam. This is common in Children Who Remember Prior Lives (CWRPL)

The science of Luke's story tells us that the human life force or soul has no gender, social, or racial identity. The odds-against-chance calculations suggest that Pamela Robinson returns as Luke Ruehlman. This is not an unusual case study.

Hanan Monsour died and came back as Suzanne Ghanem and started, at sixteen months, recalling her old life. When reunited with her prior family as Hanan, Suzanne identified fifteen prior relatives by name by the age of five. Those family members came to accept Suzanne as Hanan.

Charles Leininger, as a child, remembered dying as a Navy pilot during World War II in the Pacific. He remembered the ship he was on, the *Natoma*. He was James Huston in that life, and when young Charles was taken to a reunion of *Natoma* veterans, they accepted him as who he was in his previous life.

I could go on with more examples, but they all amount to the same thing: the odds against the chance of these people knowing about their previous lives is certain. Being able to convince others of who they were occurs because they know things private to the person they are trying to convince. They *were* who they claimed to be; both parties remembered the same facts in the same way because they shared a common experience.

These stories are examples of a category of consciousness science called Children Who Remember Prior Lives (CWRPL). The University of Virginia has been studying cases like this for over sixty years.

This kind of story was once considered a scientific anomaly, something our science could not explain. But once they are connected to other categories as fractals, such as NDEs and past life regression, they prove mathematically that this is our reality.

I am asking you for several smaller interconnected donations whose benefit will add up to more than the sum of their parts. Once complete, its use will be global. The following explanation will also show where we are asking others to support this effort. All funding requests, including this one, will be available on the website www.TIFACS.org, The Institute for Advanced Consciousness Studies (TIFACS). The overall plan will also be there, laying out the need for \$450 million for consciousness research.

The overall need request is \$450 million and was written by Dean Radin.

<http://www.thescienceofreincarnation.org/wp-content/uploads/2020/11/DeansPlan2.pdf>

This plan emphasizes four areas: education, empiricism, theory development, and applied research.

This request to you, each individual billionaire, is for \$50 million. What follows is how and where that \$50 million will be spent and on what. Each recipient is a luminary in the field of consciousness science, each with a different focus. Our mission at TIFACS is to infuse consciousness science with resources and build connectivity to increase and improve our understanding of ourselves and each other. **I would trust each recipient would do as this plan requests or return the gift/donation.** Each donation is given to the named individual to manage for the benefit of consciousness science. They all know of this effort to a greater or lesser degree.

Request for Funding (RFF) #1: Jim Tucker, the University of Virginia, Children Who Remember Prior Lives, \$5 million

Jim B. Tucker, MD, Director of the **Division of Perceptual Studies**, University of Virginia Health System. He studies **Children Who Remember Prior Lives**.

Now two things: first, when we use odds-against-chance calculations through thousands of cases, the fact that our consciousness transcends our permanent bodily death is now a calculable certainty in each category of

this science. When we use each category as a fractal, we get mathematical proof that the story you just read is true; we proved it and a new reality with it. With that mathematical proof, we make the case that souls can change gender, race, and religion from life to life. That scientifically makes the case that LGBTQI+ is normative. That—scientifically—apostasy, blasphemy, and celibacy should be removed from all religious canon. Scientifically we can use this information to reshape our society.

The request is for \$5 million to support this research at UVA, and the ask is for Jim to take out, in one compendium, the transgender cases he and the late Ian Stevenson have compiled, like the first example. Using odds-against-chance calculation, these observations are a certainty. Still, currently, there is no way to connect them to our reality scientifically, even though it could be done and prove scientifically that being gay, straight, or transgender is just a common experience of consciousness and not a disorder. Their observations alone can't prove that, but if he aggregates them, we can connect them to other observations in consciousness science and make that case.

So, we are providing a list of requests that your contribution will thread together to present this science in a cohesive and easy-to-understand explanation so that all causes you support can use this information to refute the lies and lack of knowledge on the subject and to educate the world.

The asks: We are asking Jim Tucker to lift and separate:

1. Transgender narratives
2. Narratives by region (mid-East, far East, West, etc.)
3. Narratives by religion

This is to show that the effects we are documenting are universal.

4. These be contributed to the book *The Standard Model of Consciousness*, being cataloged by the University of Arizona under the observations section, and their mathematical information will be given to Jessica Utts, so she can create and produce a fractal proof.

To that end, we want to aggregate the landscape of observations and lift transgender stories from the data pool/mine because this is our reality proven by mathematics.

RFF #2: Brian Weiss the University of Miami, Past Life Regression, \$5 million

This category is Past Life Regression. Rather than present a case study here, refer to the past life regression of actor Glen Ford as our example. Simply google it.

Brian Weiss graduated from Columbia University and Yale Medical School and is chairman emeritus of psychiatry at the Mount Sinai Medical Center in Miami.

The gift would be to the Psychiatry Mount Sinai Medical Center Department at the University of Miami.

Brian Weiss, \$5 million, and the ask is to do the same thing we are asking of Jim Tucker. He regularly encounters the lives of the opposite gender when regressing individuals. Ultimately, all these are observations of how consciousness manifests itself, and eventually, they become data points in our fractal proof.

The asks: We are asking Brian Weiss to lift and separate:

1. Transgender narratives
2. Narratives by region (mid-East, far East, West, etc.)
3. Narratives by religion

This is to show that the effects we are documenting are universal.

4. These be contributed to the book *The Standard Model of Consciousness*, being cataloged by the University of Arizona under the observations section. Their mathematical information will be given to Jessica Utts, so she can create and produce a fractal proof.
5. Ask questions of the “Masters” regarding nonlocal consciousness and suggestions for studying it.

RFF #3: Pim van Lommel, Category NDEs, \$5 million

NDEs are near-death experiences. Near-death experiences are cognitive events that occur when a person experiences bodily death. While there is not a transgender narrative here that I know of, whether you are gay or straight, you can experience an NDE. The landscape that the person experiencing the NDE describes is very similar to the landscape that Children Who Remember Prior Lives and Past Life Regression describe. There are enough data points between these groups to identify the landscape described as fractals of each other.

Explaining NDEs, this is what Pim van Lommel says about the continuity of our consciousness:

According to our concept, grounded on the reported aspects of consciousness experienced during cardiac arrest, we can conclude that our consciousness could be based on fields of information consisting of waves and that it originates in the phase-space. During cardiac arrest, the functioning of the brain and other cells in our body stops because of anoxia. The electromagnetic fields of our neurons and other cells disappear, and the possibility of resonance, the interface between consciousness and the physical body, is interrupted.

Such understanding fundamentally changes one’s opinion about death, because of the almost unavoidable conclusion that at the time of physical death consciousness will continue to be experienced in another dimension, in an invisible and immaterial world, the phase-space, in which all past and present and future is enclosed. Research on NDE cannot give us irrefutable scientific proof of this conclusion, because people with an NDE did not quite die, but they all were very, very close to death, without a functioning brain.

The conclusion that consciousness can be experienced independently of brain function might well induce a huge change in the scientific paradigm in Western medicine and could have practical implications in actual medical and ethical problems such as the care for comatose or dying patients, euthanasia, abortion, and the removal of organs for transplantation from somebody in the dying process with a beating heart in a warm body but a diagnosis of brain death.

There are still more questions than answers, but, based on the aforementioned theoretical aspects of the obviously experienced continuity of our consciousness, we finally should consider the possibility that death, like birth, may well be a mere passing from one state of consciousness to another.

This theory, as articulated by Pim, is supported by the narratives above. They are, in fact, fractals of each other. They are each an iteration, and they are self-similar—the donation to Utrecht University should be balanced by the following asks.

The asks:

1. Transgender narratives
2. Narratives by region (mid-East, far East, West, etc.)
3. Narratives by religion

This is to show that the effects we are documenting are universal.

4. These be contributed to the book *The Standard Model of Consciousness*, being cataloged by the University of Arizona under the observations section. Their mathematical information will be given to Jessica Utts, so she can create and produce a fractal proof.

We ask Pim to provide Jessica with matching fractal points from his observations that match the other categories. NDEs happen to transgender people, in all regions and all religions. The effects we are documenting are universal. These are contributed to the book *The Standard Model of Consciousness*, being cataloged by the University of Arizona under the observations section.

When we take all three views of this nonlocal consciousness, we get different perspectives of the same site, looking forward (remote viewing) and backward (past life regression). We also see that same landscape in the NDE observations.

How do the mechanics of this landscape and our travel through it work? Does this go directly to communicating with aliens in our local space?

There is one final notation to this: from the sum gifted to Utrecht University, 10% of that sum of \$500,000 be set aside for Titus Rivas to use at his discretion in the advancement of out-of-body consciousness.

RFF #4: Jessica Utts, Chair of Statistics at the University of California–Irvine, to formalize the math, \$5 million

She has done odds-against-chance calculations of the various subsets we have discussed, but while that math points to certainty, it is not a proof. If she does the fractal geometry of her calculations, she “proves” this hypothesis mathematically.

Now several exciting things happen with this proof. First, it challenges any other evidence to be more factual and supports religious belief in an afterlife. This condition of science also includes all creatures with electromagnetic signatures, so all religions are present; it eliminates apostasy, blasphemy, and chastity as anything other than wrong and not founded in fact.

The donation would be to UCI, The University of California at Irvine.

The asks: We ask Jessica Utts to:

1. Provide the framework for the fractal proof that this is our reality. The landscape of observations will be aggregated and shown to be valid across all races and cultures. Transgender narratives; narratives by region (mid-East, far East, West, etc.); and narratives by religion we are documenting are universal.
2. These be contributed to the book *The Standard Model of Consciousness*, being cataloged by the University of Arizona under the observations section.
3. When we take all three views of this nonlocal consciousness, we get different perspectives of the same site, looking forward (remote viewing) and backward (past life regression).

RFF #5: Center for Consciousness Studies (CCS), \$10 million

Stuart Hameroff, Center for Consciousness Studies at the University of Arizona.

Stuart Hameroff's research pursued microtubule information processing and anesthetic action. In the mid-1990s, he teamed with eminent British physicist and Nobel laureate Sir Roger Penrose to develop a controversial quantum theory of consciousness ("orchestrated objective reduction" or "Orch OR") based on microtubule quantum computing. Harshly criticized initially, Orch OR is now supported by experimental results, including anesthetic action. In 2017, with Sir Roger Penrose, James Tagg, Ivette Fuentes, and Erik Viierre, Hameroff co-founded the Penrose Institute, intended to support research based on the various works of Sir Roger Penrose (cosmology, quantum mechanics, general relativity, black holes, geometry, and consciousness).

Stuart Hameroff's work is putting the "how" under our observations and the cognitive landscape we see.

Stuart Hameroff needs more computing power than anyone I know because he is actually trying to count the electrons in the human soul. He would disagree with that rendering, however, but reduced to one sentence, it is what is going on at the Consciousness Center. For your clarity: the electron exists both as a particle and a wave, and everything we talked about in our observations is waveform effects in a particulate environment. Here is the website:

<https://consciousness.arizona.edu/>

This leads to a new, nonlocal space, where the intelligence in the alien spacecraft we cannot deny any longer resides, just like we do. Billionaires are being asked to fund an acceleration in human evolution. Radin's involvement in DNA tracking of nonlocal consciousness genes foreshadows Commander Troy on a flight deck and humans in space, genetically advanced through the use of CRISPR.

There is so much more to connect, and so much that isn't connected. In the nonmaterialist category, we have stories about interaction with what Brian Weiss calls the "Masters," intelligence forms we can talk to nonlocally. Stuart Hameroff can measure the body during these interactions, and this same holistic approach can be used to ask pointed questions about this science when we do these measurements. So, what we are trying to fund is taking Jim Tucker's children, Brian Weiss's regresses, and Pim van Lommel's NDEs into the lab for comprehensive studies. These forms of nonlocal consciousness can be used militarily for data acquisition.

We are coming to a point where our data management capabilities and our bodily information to store all the data of the body will be equal.

Our consciousness of birth and death is an upload-download fractal of information management. This upload-and-download model is a fractal of birth and death, the only difference being the amount of information. This fractal example becomes the methodology for the other fractals.

<https://consciousness.arizona.edu/>

RFF #6: The University of Arizona College of Social and Behavioral Science (CSBS), \$5 million

The College of Social and Behavioral Science, where the CCS is housed, has to be funded to study the global effects of our coming change of consciousness in terms of religion, society, and politics, as completely as we can get it, to publish a Standard Model of Consciousness, then teach it.

I want to make clear to you the importance of this particular contribution/donation and the point of keeping it separate and distinct from the contribution to the Consciousness Center. The school is/will be the central processing point for the information from the Consciousness Center. It is here that the information will be taught, and the impact of the new information about consciousness will be evaluated, implemented, monetized, and weaponized. It is a central clearinghouse for how the basic science is done at the Consciousness Center, it standardizes how the science is processed, refined, and used. You can instruct the religious on how to rewrite the human belief system from this point because it will turn belief into understanding.

What follows is a simple factual account of what you could call the Standard Model of Consciousness, which all the contributors collectively produce. It posits that we live multiple lifetimes, our consciousness resides in and outside our bodies, and when we die, our consciousness is still discreet, meaning it is still “you.” The math proof changes religion because we have a better scientific understanding of the afterlife. However, religious law must be rewritten in many cases to accommodate our new factual knowledge. It changes our view on sexuality because life to life, we change gender regularly. As we incorporate this new view of consciousness into our reality, we encounter aliens who fly through our airspace, which we have documented. The DOD is looking for new methodologies that will put them into communication with those aliens on new wavelengths. Your donation and the donations of the other donors will make all of this possible.

The asks: I would ask the College of Social and Behavioral Science:

The first ask is for them to compile and complete a book entitled *The Standard Model of Consciousness* in preparation for writing its curriculum. This needs to be taught at all levels. In it, they have to present an inclusive look at our reality, including and not limited to the points in this proposal—such as children who remember previous lives, past life regression, NDEs, remote viewing and clairvoyance, and all other understandings as best presented at the Consciousness Center. This includes contributions by the scientists named in this document.

The second ask is to evaluate the social and political consequences of a reality that includes aliens and an afterlife. The ramifications must be part of the book *The Standard Model of Consciousness*.

The third ask is to develop a plan to deal with world political change due to this new reality. That includes repairing the damage to the earth and seeking funding to enact that change.

Education asks for this proposal:

The fourth ask is to teach this information at every level, globally. This involves Prometheus Entertainment, who already have the footage and the understanding of this reality. Once done, it can be translated into every language, and people can watch it on their cell phones. I am asking billionaires to fund and implement global cognitive change for the sake of humanity.

The ask of Prometheus would be paid for by the College of Social and Behavioral Science, which would be writing the curriculum for this new iteration of consciousness science. The interaction between CSBS and Prometheus would begin with a video prototype for classroom presentation written jointly by the College of Social and Behavioral Science and Prometheus to present all of the information on the science of extraterrestrials and aliens and the various subcategories of each.

I would ask them to work with Prometheus Entertainment to produce educational videos on the Standard Model of Consciousness and its relevance in society for every variation of consciousness and in every language. In putting it on video, it can and will end up on every cell phone on the planet.

For the first time, with a billionaire's contribution, there is cohesion among the disciplines of consciousness science, and the document produced becomes a teaching tool to a new generation so arguments advanced by J. K. Rowling and others can be refuted scientifically and mathematically. Dissemination of this information needs to go to the harshest environments for LGBTQI+ people. Therefore, we ask that this be printed in all languages and have a home on the web at TIFACS.org. To see who we are, visit www.tifacs.org. The following organizations we ask to disseminate copies of these produced documents in areas they are trying to save individuals so that, ultimately, the mindset changes globally.

RFF #7: Noetic Institute, \$5 million

Let us say that there was a group of scientists who wondered if there was a DNA marker that indicated if someone was "gifted" when it came to nonlocal consciousness, and suppose that these scientists had DNA samples taken from the best psychics they could find. It would be cheap to take the sample and send it to a lab. Let us also say that these scientists identified the DNA code for such an ability, much like finding the DNA marker for sickle cell anemia. And let us say that using CRISPR could enhance that nonlocal ability. In a simple experiment, they would be rendering *homo sapiens* into the past and introducing *homo futurists*. (Radin DNA)

The asks: I would ask Radin and the Noetic Institute to contribute to the Standard Model of Consciousness, and the \$5 million is to further their work.

<https://noetic.org/>

That's the first tranche to fund Radin's plan for \$450 million. Here is the link to the overall plan:

<http://www.thescienceofreincarnation.org/wp-content/uploads/2020/11/DeansPlan2.pdf>

RFF #8: The World Professional Association for Transgender Health (WPATH), \$5 million

<https://www.wpath.org/publications/soc>

The World Professional Association for Transgender Health promotes the highest standards of health care for individuals through articulating standards of care (SOC) for the health of transsexual, transgender, and gender nonconforming people. The SOC is based on the best available science and expert professional consensus.

The overall goal of the SOC is to provide clinical guidance for health professionals to assist transsexual, transgender, and gender nonconforming people with safe and effective pathways to achieving lasting personal

comfort with their gendered selves in order to maximize their overall health, psychological well-being, and self-fulfillment.

The ask:

WPATH should use the literature we produce through TIFACS to educate in areas that persecute people of gender variance.

RFF #9: Rainbow Railroad, \$5 million

<https://www.rainbowrailroad.org/>

Rainbow Railroad is a global not-for-profit organization that helps LGBTQI+ people face persecution based on their sexual orientation, gender identity, and sex characteristics. In a time when there are more displaced people than ever, LGBTQI+ people are uniquely vulnerable due to systemic, state-enabled homophobia and transphobia. These factors either displace them in their own country or prevent them from escaping harm.

Instead of just getting people to safety, they distribute to those points in the world the aggregate of the information included in this fund request.

The ask: They distribute *The Standard Model of Consciousness* to explain that gender variation is normative among humans and not a disease; it's a common manifestation of consciousness.

RFF #10: TIFACS, \$1 million

www.tifacs.org

What's going to drive this change is an organization to do it

The Institute for Advanced Consciousness Studies (TIFACS) gets a \$1 million founder's grant. Its job is to implement the plan to raise \$450 million as presented in this proposal. This will be the organization that will manage the overall grant proposal for \$450 million. Its mission will be to manage the grants and collect and correlate the data to all organizations that would benefit from said information.

The Scientific Organizational Pyramid

TIFACS presents funding availability and opportunities for funding to the consortium of schools and organizations through the Consciousness Center at the University of Arizona and additionally through any university that houses a chair of consciousness study or a related field that the study of consciousness would encompass. The choices for programs to be funded are made through and by the scientists themselves in a collaborative manner so that a complete understanding of human consciousness is drawn to the best of our ability at the moment but encompassing all aspects of how our consciousness expresses itself.

Who is being asked and why?

All these efforts must be coordinated to produce the Standard Model of Consciousness in textbook form, teach it, and advance the solutions to human management it prescribes. There are several questions we need to address before we begin this.

1. If this is so important, why aren't we advancing an intelligent plan and facing squarely the reality unfolding before us? No political system on earth can address this.
2. Of the individuals who can see aspects of this consciousness research in all its forms, how are the efforts being coordinated?
3. Of the emerging paradigm, what is the response from the best minds we have to deal with this?
4. The point of everything I have written is to coordinate this effort of self-defense and self-discovery for a species: humanity.

Who would I initially invite to a consortium of billionaires?

Lawrence Rockefeller. Billionaire Laurance Rockefeller is financing what is billed as a scientific survey aimed to sort hoaxes from the purportedly truly mysterious crop circles.

Since 1978, patterns of matted-down cornstalks, rapeseed, and other crops have been appearing in the fields of Wiltshire and neighboring areas in England. Enthusiasts attributed the so-called crop circles to UFO landings. Many people still believe that some of the patterns, because of the speed of their appearance and their perfect geometry, must have a nonhuman origin (see home.clara.net/lovely/homepg.html).

There are two distinct varieties of crop circles and how they are created: one, a human version of hucksters and responses, and the other ones made by means we don't understand, with an obvious signature of which is which. But what information is being exchanged?

Robert Bigelow. Robert Bigelow has a deep understanding of this landscape and knows how to manage this type of venture within consciousness science. Begin the plan to fund twenty chairs of parapsychology using your judges from the writing contest you just ran and the Center for Consciousness to select where the chairs should be placed and what funding they should get. I would ask that the first chair be placed at the University of Edinburgh and be called the Dumbledore Chair. If each chair is funded for \$10 million, this would need \$200 million. See Radin's plan for information on the structure.

McKenzie Scott, your \$50 million donation is one-ninth of the \$450 million we need to fund consciousness research. The \$450 million number comes from Dean Radin's overall plan. This first \$50 million is specific in its targets and its purpose.

Radin's plan is attached here. Your donation funds TIFACS to run other programs and other projects to seek those contributions to fill out the list of Radin's proposed needs.

Elon Musk. Very simply, sir, this consortium of researchers can connect the mind to your neural net and do this research better than you, at a lower price. I suggest outsourcing your needs to schools within the consortium that the Consciousness Center represents.

I would like Mr. Musk to donate \$100 million to the University of Arizona Center for Consciousness Studies. This would filter through the Center into a global consortium of schools specializing in different aspects of consciousness. I would ask Mr. Musk first to call me so I could explain the landscape, and then call Stuart Hameroff, Nobel Prize laureate with Roger Penrose for their work in microtubules, to explore the areas that Mr. Musk needs help with.

Mr. Musk's project killed seven monkeys trying to connect to their brains. Rather than connect a device, one that harmonizes brain wavelengths may be better, and this consortium leads the world in this understanding, bar none. To an investment guy, you are early on the arc of the commercial benefits of this, and within the consortium, there are cutting edges in different subcategories. It may be opportunistic for you to also speak with Doctor Hameroff about what may be needed in support and what may develop from such support.

That said, change such as this has derivative effects down the line. To see the whole scope, read Dr. Radin's plan for funding; the total tranche is \$450 million. This overall proposal here attached represents the first \$50 million nominal. Please, call me first before you call Dr. Hameroff. It's not imperative; it will be helpful. I want to frame the landscape you are stepping into, sir; the military and business applications for what I just described are transcendent. This leads to a Remote Artificial Intelligence Viewer.

Jennifer Pritzker deeply understands nonlocal mentality, which she combines with a military background. I know no one better in the world to be involved with this project funding remote viewing and nonlocal consciousness.

There is no one I could ask that has her qualifications. Decisions she has made spring from a place that is not here but expresses themselves here because, as Plank would say, consciousness is primary and matter derivative. So, I know she knows. I want her to run a military operation there. I want her to put me on the flight deck of the alien spacecraft in our airspace.

Here is how.

1. Establish a website for real-time sightings from anywhere in the world; you can log in and report a sighting of where alien spacecraft are.
2. Establish protocols in remote viewing.
3. Use IRVA as the control group.
4. Coordinate with AATIP/UAPTF at the Pentagon.
5. Establish a private global computer network for anyone, anywhere, to log on and report UAP/UFO activity, where remote viewers are notified in real-time, following Stephan A. Schwartz's protocols on remote viewing to view, register, and report, so we can begin to form an aggregated view of what is traversing our skies.

This is already in effect at MUFON, The Mutual UFO Network, at <https://mufon.com/>. Their reach is limited as data from weather collection sites does not fully filter into their database.

6. When we make contact—not *if*, but *when*—the first question we ask is: "Explain navigational models of time having mass."
7. Finally, all of this will go into an accessible database to catalog what we believe are over twenty species of visiting aliens, over 200 million abductees, and various types of spacecraft.

8. The net result of this effort is to expand communication with the alien species who have been here visiting Earth for ten thousand years.
9. While organizations like IRVA, MUFON, and CSETI cover some aspects of this effort, they are not connected cohesively and are all underfunded. Additionally, the governments of the world hide and mishandle their own information. This affects us all, and a structure with open architecture and complete information is imperative to making an intelligent, cohesive response to the emerging set of circumstances.

Bill Gates. There is none better to lead a global information processing effort, including AI and nonlocal consciousness. Please see *The Mathematics of the Science of Reincarnation*, chapter 14, “The Remote Artificial Intelligence Viewer.” It will open the universe to communication, like how the radio opened the earth to instant communication.

Jeff Bezos. This proposal is nothing less than creating a Standard Model of Consciousness so that we can protect ourselves collectively from the threats we all face and some of the risks we will have to take. In that, there is scientific research demonstrating that element 115 reacts to gravity. Imagine creating a motor that does not need fuel, rides on gravity waves, and has endless ever-present energy in abundance. One technology change to a gravity drive changes everything. Can we access nonlocal sources for the how-to? Once done, where in the universe will it take us?

Melinda Gates. I would ask to become involved with education as outlined in Radin’s plan. The science we are defining rewrites human history and begins to explain our place in the universe. Someone needs to take ownership of the global distribution of this information, and no one is better qualified than Melinda in this endeavor.

Mark Cuban. In a sentence, I want you to commercialize anything that falls out of the research and application that comes from the consortium’s work.

By collaborating, we can contribute \$300 million and manage the threats and opportunities of this new reality.

Mark Cuban, you would become involved with the Consciousness Center to fund commercial applications of discoveries.

I mean no disrespect when I attach this UN report that says we are headed to an unlivable world.

Consciousness research is critical to the solution. Your money won’t protect you from a collapsing world, but it might save us all.

<https://apnews.com/article/climate-united-nations-paris-europe-berlin-802ae4475c9047fb6d82ac88b37a690e>

Charles Koch is being asked to help rewrite the Russian constitution in Proposal Number 3 to align it with Western constitutions, a place where leaders retire from public life rather than being overthrown or dying in office. This is not to overthrow the Russian government but to leave the public officials in place and institute a freer model to improve commerce and health. The goal is to provide a level of benefit to their population compared to Finland. While the initial ask of you is to help rewrite the Russian constitution, the underlying is to help design a demountable constitution that will harmonize the world’s constitutions to facilitate trade and the safety of economies.

Its basis should be in an operating system design; in fact, I would like a version designed by systems engineers rather than politicians, as all 195 countries need to be harmonized if we are to “Face Space” together. The United States Constitution must be an example of removing gerrymandering so true sample size components can optimally and frictionlessly operate in an interplanetary environment. This is not to remove autonomy from individual groups but to present the best operating system that they can adopt plank by political and social, and religious plank. The consciousness science which will be embedded in the constitution I am asking you to fund will have the fluidity to facilitate major social change without political upheaval.

The How: The way I want you to begin rewriting the Russian constitution is to hire the Brookings Institute to write the preliminary draft with the instructions to make it an aggregate of the constitutions of the NATO countries. Its goal is to mimic the Metrix of Finnish social welfare models, which rank in the highest tier of Western countries. I want this as a starting point to present to the other Russian oligarchs how to remodel their political system.

Look to the loss of money and opportunity this last Ukrainian war cost all of you. This will continue to happen in totalitarian societies where consensus is overruled and personality is more important than the economy. There are only ninety-six to one hundred Russian oligarchs, and presenting any plan to structure Russian politics to their economic benefit would be novel. This effort is the consulting firm they did not ask for but need badly, not just for them but for all 2,200 billionaires worldwide.

To be clear, this is not asking to overthrow their government. The politicians themselves should lead this effort, but the overall structure fosters economic stability, growth, and an orderly and regularly scheduled transfer of power.

The Why: The attached proposal to fund consciousness science explains why they should do this and the transcendent nature of what has been proven through a body of evidence we need to expand.

1. There is a proven continuity of consciousness that transcends death, and we come back to live serial lives.
2. Aliens regularly visit Earth now, and the documentation is so overwhelming that governments classify it and mishandle it. NASA has documented over 5,000 planets, and there are alleged to be between twenty-two and twenty-four humanoid species that visit Earth now. The consciousness proposal attached here addresses direct private-party communication.

Enterprise Risk Management: In one turn of a generation, Earth will be a net exporter of life into the universe. It will need an educated and healthy workforce to achieve that. People then become an export themselves. You may be among them.

A meeting with you and the other one hundred Russian oligarchs to instruct the politicians what to enact literally will change the world. This proposal is not to dethrone Mr. Putin. Rather, it is a suggestion for him to retire to his yacht and be left alone with copious amounts of money. He can come back and run in an unriggered system, and once that system is unriggered, Russia can join NATO. This process begins with this proposal to you, and it will stumble fitfully to its inevitable conclusion because as much as the governments are trying to keep a lid on it, aliens are here, and our governments are mishandling this badly. It's not Russia against NATO; it's humanity with the ability to leave planet Earth.

So, the politicians cannot make this change, the Russian army lacks the expertise, and outside pressure won't work. Still, those that own the system—you and the other oligarchs—can make it better for yourselves, which will make it better for everyone else.

Now some math: there are about 2,200 billionaires in the world. There are 227 decision-makers who determine policy; my source is a TED Talk on how that policy is made and shaped. It is estimated that the 100 billionaires in Russia have stolen \$1 trillion from the Russian people. None of them understand the changing events in alien contact and emerging consciousness science. They collectively own the media, the politicians, and the banks. Still, given the changing conditions, threats, and opportunities, they have not thought about how to manage our planet and our future cohesively. This request is to formalize a plan of action to save the world.

Finally, to the bankers who might read this. The overall proposal presented here makes the case that consciousness research is a cottage industry. This proposal is a roll-up in a banking business sense, and the whole of the result will be greater than the sum of its parts. The value of these resources will be exponentially greater after the infusion of this funding, the ramifications of which will be that humanity is off-world and dealing with other civilizations. People become an export, and our global GNP will be a measure of our racial worth by other races. Great wealth will simply be lines of code. War here has to stop because it represents poor social management. Those resources need to be redeployed. I have asked Mackenzie for nominally \$50 million; this plan needs another \$400 million.

This is what TIFACS will attempt to do while raising the \$450 million for consciousness science. Here is the link to other initiatives that TIFACS will make in the coming months:

[TIFACS LINK HERE TO OTHER PROPOSALS](#)

It should also manage both the website and YouTube channel. They currently look like this: www.tifacs.org. It is where the framework for launching this effort is being built. Your contribution formalizes this effort. You can connect to the YouTube channel there or the Reddit subreddit r/reincarnationscience. There is a list of different domains pointing to this site, and it is where the science we are asking to be aggregated should be given to all interested organizations for free, supporting various causes connected to this effort.

This will:

- Provide a fact-based narrative to the world in print and film.
- Fund consciousness research.
- Deal with the aliens in our airspace in a cohesive and managed way, something governments are incapable of.
- Deal with the continuity of consciousness; if we are to return to Earth in another life, may the next one be free of war. This is the goal.

This heartfelt and reasoned cause needs resources; the resource I am asking for is you. I want you billionaires to be its guardian angel.

This will change the world. We ask that you share this request with the other donors so we can collectively work together. This document also has asks of the scientists and organizations named here. We are aiming for total transparency in how we operate, what is funded, what the results say, and how we make decisions on

further development based on results gathered to date. We need the brightest minds, and we need resources to have them incentivized to work with us.

This is a team effort of donors and researchers to produce a Standard Model of Consciousness, how to use it, and the consequences and ramifications of such an effort.
All donations go directly to the institutions named above.

Your donation for TIFACS should be sent to:

TIFACS
c/o Fox Rothchild, LLC

Proposal #2

Contact

Funding a cohesive program of consciousness study and its application to societal laws

Much must go into the details of building the first Commercial Intergalactic Spaceport. Where to put it, the design, and so forth. This is the explanation of where the second \$50 million gets spent.

My name is Bob Good, and I am working to fund various initiatives in consciousness science that you may find innovative and worthy of your support. I have asked Mackenzie Scott and several other billionaires to jump-start this by donating fifty million dollars to six different schools and four organizations in Proposal Number 1 that will work cohesively to produce the scientific proof that supports your and Mackenzie's social positions.

To synopsise Proposal #1:

We have proven mathematically that our consciousness transcends our permanent bodily death, and there is a continuity of an individual's consciousness. This makes us conscious in a new dimensional space, a fourth-dimensional awareness. This proof scientifically explains clairvoyance, remote viewing, the efficacy of prayer, heaven, and the electromagnetic nature of consciousness. Individually many describe "seeing" this fourth-dimensional space with their third eye. As a race, though, we are third-eye blind. So, I want to give you a consensus third-eye view of our reality. To do that, I must tell you about our most scientific consensus view of aliens/extraterrestrials. Joining the request to Mackenzie Scott with this request to you changes the fundamental understanding of our place in the universe.

Managed Global Contact

I will tell you about aliens from an insider's perspective and give you a consensus picture extracted from sources in the public domain. You will know many—all are verifiable—and at the end of the description that these individual bytes will produce collectively, you will have a more cohesive view of the landscape we are working in and our goals to decide about this request.

Regarding their presence aside from cell phone footage worldwide, the US government has acknowledged this activity in their unclassified report from the Office of the Director of National Intelligence, titled *Preliminary Assessment: Unidentified Aerial Phenomena*, dated 25 June 2021.

It makes the following points:

- * "There are probably multiple types of Unidentified Aerial Phenomena (UAP)"
- * "UAP poses a safety of flight issue and may pose a challenge to US national security."

* “Explaining UAP will require analytic, collection, and resource investment.”

* “The UAPTF (The Unidentified Aerial Phenomena Task Force) is looking for novel ways to increase collection of cluster areas...”

This admission was forced by the ubiquitous nature of cell phone footage and the navy’s cameras showing technology we, as humans, do not possess.

This admission is peeling back the onion. There has been technology transfer from alien species to humans for years.

So, let us run through narratives lifted from the media to get a picture of what is out there, for our amusement. I say that tongue in cheek because what I am presenting is already a fait accompli.

“Former Canadian Minister of Defense Paul Hellyer said that aliens not only exist but are on Earth among people.” He said that there had been four alien species visiting Earth for thousands of years...

In support of his words, the ninety-year-old ex-minister spoke about one incident in 1961 when Canada noticed a group of fifty unidentified flying objects moving from the Soviet Union to Europe. Then, this group of objects suddenly went to the North Pole and disappeared. Hellyer noted that the investigation of this incident lasted three years, and it unequivocally showed that the activity of extraterrestrial civilizations flew to Earth to ensure that people would not use nuclear weapons.

According to Hellyer, aliens already live on our planet: most aliens are like humans, so it is almost impossible to notice them in the human mass. He first spoke openly about his belief that governments are covering up an alien presence back in 2005, saying UFOs are as plentiful in our sky as airplanes. “Much of the media won’t touch it, so you just have to keep working away at it, and we will get a critical mass, and one day they will say, Mr. President or Mr. Prime Minister, we want the truth, and we want it now because it affects our lives.”

He said that aliens had visited Earth from different star systems, including the Pleiades and Andromeda. “There are extraterrestrials from Andromeda, and ones that live on one of Saturn’s moons. There is a federation of these people, and they have rules; one of them is that they don’t interfere with our affairs unless they are invited.”

The former Secretary of Defense of Canada noted that aliens are not aggressive and have a huge stock of knowledge. However, according to him, guests from other planets do not want to share their knowledge with people yet, because they are afraid that earthlings would use them for wars, and not for good purposes.”ⁱ

In an article from the *New York Post*, we have the following excerpt.

“Former CIA Director R. James Woolsey said he believes UFOs could exist after his friend’s plane was “paused at 40,000” feet—and hopes humans would be friendly to extraterrestrials if they ever make contact, according to a report...

In December, (2021) ex-CIA Director John Brennan said it was “presumptuous and arrogant” to believe there are no other forms of life than the ones on Earth...

In April 2020, the Department of Defense [released a statement confirming three unclassified](#) navy videos from 2004 and 2015, each showing “unidentified aerial phenomena.”...

Last month, former Director of Intelligence [John Ratcliffe said](#) on Fox News that “there are a lot more sightings than have been made public,” ...

“And when we talk about sightings, we are talking about objects that have been seen by navy or air force pilots, or have been picked up by satellite imagery that frankly engage in actions that are difficult to explain,” Ratcliffe said...

“Movements that are hard to replicate that we don’t have the technology for. Or traveling at speeds that exceed the sound barrier without a sonic boom,” he added...

The UFOs were seen moving at incredible speeds and performing seemingly impossible aerial maneuvers. One of the clips showed a dark circular object flying far in front of a jet, while a second caught a small object racing over land.

The third captured a circular object first speeding, then appearing to slow down—and moving closer to the pilot’s camera.

The Pentagon announced in September (2021) that it created an [Unidentified Aerial Phenomena Task Force](#)...

The latest developments come [amid rising interest in UFOs](#), which has been indicated by a surge in sightings.

Sightings were up in 2020 compared to the previous year—with more than 6,600 recorded during that period, according to National UFO Reporting Center data.ⁱⁱ

From the web site How and why which tracks this type of information we get the following

“William M. Tompkins, MUFON (Mutual UFO Network) Director: in July 2017, at a press conference, Tompkins made an unprecedented statement. He worked for the Douglas Aircraft Company alongside extraterrestrials (Nordic alien women). It had been four to seven years before NASA appeared, he claims in his book (mentioned above) that was published in 2015.ⁱⁱⁱ

He met with two Andromedans who became his mentors and took him on board their space vehicles including a large extraterrestrial mothership where he was exposed to the teachings of the Andromedans over a three-month period. The Andromedans gave him information about cosmic spirituality, life in the universe, and Earth’s galactic history.

He claimed: This civilization, no matter where in the constellation it lives, has a single government and is spiritually 4,700 years more advanced than us, as well as 5,000 years technologically. However, they maintain a balance of the spiritual and technological. In fact, they use technology to be able to evolve spiritually.

This is because there are different dimensional levels. We are currently in the third dimension. We still haven't reached the fourth, much less the fifth. What differentiates the third from the fourth dimension is the conscience.

In the fourth dimension, there is a collective consciousness because everyone is telepathic and can read the minds of the rest. This leads to each person being authentic, transparent, and without ulterior motives. Upon entering this dimension, the being becomes clairvoyant since, in this state of consciousness, energy systems and fields can be seen. (And here is the area of consciousness we are studying as it manifests itself in our reality/time-space/and other dimensions.)

However, there are still dualities, and the judgment systems are modified since the judiciary will be able to make decisions according to the energy fields. The beings of Andromeda have not lived in a society as manipulated as ours. They are telepathic and clairvoyant because they have studied all the sciences.

All souls know who they are; they all know about their past lives, and every time they incarnate, they are aware and know where they are going. In addition, they can see their evolution in the afterlife.

So, what is true? Between the lack of information, misinformation, and disinformation, the truth needs a friend. So, am I to believe that aliens are hiding in plain sight and we as humans are a bunch of warring tribes, that heaven exists fourth-dimensionally, and that we are being genetically manipulated? Humans rode horses for the last 12,000 years, and in the last one hundred, we went from riding horses to going to the moon.

How much of this is believable? That is the best explanation we have, and that is not enough. This needs to be studied, and in formalizing the study, it will change the world. In terms of the study of consciousness, we must look at what we see when we use our third eye.

This goes to a very core area of consciousness: connecting individual consciousness with universal consciousness as a means of seeing. Telepathic ability is regularly encountered when dealing with aliens. They have a higher degree of extrasensory perception (ESP).

So, let's walk this path through the mind of the man who taught the US Army how to remote view, Ingo Swann. In his book *Penetration*, he talks about the difference between Earthside ESP and spaceside ESP. When he talks about consciousness, it is not just individual consciousness or how that individual consciousness connects to universal consciousness but that our collective consciousness itself is being manipulated.

Listening to Ingo's words themselves is like visiting a pristine mountain stream before it has been polluted by travelers, campers, and con men. A fresh look at new data through the lens of Ingo's impressions yields strategies for understanding human consciousness and our place in the Universe.

You cannot take part of Ingo Swann. By that, I mean you cannot accept him as the man who taught us how to remote view and opened a means of data acquisition and transfer and not take his description of aliens living right beside us, and it seems, managing their interactions with us. What I want you to hold in the back of your mind for the moment is that there are competing groups of aliens with different agendas. I would also argue that the US government is overmatched, as is humanity. But let us stay on topic.

The data on telepathy, which is how these aliens communicate based on exit interviews of abductees, gives the person with that ability universal access to information on a universal level. From the alien point of view, allowing human telepathy may be like giving a loaded gun to a child.

We have a category in consciousness science called "remote viewers," who have an ability to use psychic ability to see things in other places and times. So, here is a quick summary of what it looks like to run a psychic mission with a group of remote viewers: It is to look at a place we are seeking to gain knowledge about, and a satellite that we sent will be there soon. The remote viewers record their observations and then compare their results with what the satellite says. This is something aliens who live where I mentioned do not want to happen. That said, they may agree that the time their presence should be acknowledged is now upon us, and they may be seeking to continue to open us to us as a society.

Swann worked for the Stanford Research Institute. In 1973, there was an experiment where Swann was asked to project his consciousness to the planet Jupiter. The reason Jupiter was chosen was because NASA had probes on the way there at that point. Swann made several observations that the probes soon confirmed: he saw a hydrogen mantle, high infrared readings, and the colors of the clouds. He also saw rings, which at that point, no one had known about. He said they were smaller and closer to the planet than Saturn's. He said they were made up of dust and tiny asteroids. This was not something we could see from Earth or even assume was there. The pioneer probes in 1973 and 1974 did not see rings, but when Voyager 1 passed by Jupiter in 1979, it did see the rings as Swann described.

https://www.youtube.com/watch?v=V8kT6J_uoic

Now what Ingo says is that aliens are living on the moon and manipulating humanity so as not to develop our sense of telepathy. In a higher sense, they are manipulating our collective consciousness. Again, this may not be one race of aliens but many, and there may be competing groups.

Ingo's point is that we, as a species, are unwitting targets of this strategy, and your money that TIFACS is asking for goes to address this problem in a real sense. Your money goes to education and our acknowledgment of our place in the universe among a population of space-traveling humanoids who have

genetically altered us. Your contribution goes to acknowledging that reality. That acknowledgment from you in terms of the dollars needed to address this problem changes the world.

Now an interesting thing happens when you make this contribution. Yes, you benefit one of your core groups by educating everyone to the fact that LGBTQI+ is just different expressions of sexuality, and we all travel a circular path over many lifetimes. So, these idiots who say it is only genitals that make the gender are exposed as people who don't know who they are, who have not been exposed to consciousness studies, and who have many surprises in store for them.

But this goes well beyond that one issue. To every greedy billionaire who continues to amass money, consciousness studies just opened up huge alien markets if those markets want us. If they don't like us killing each other, then to acquire access to those alien markets, we have to change our behavior. What are the rules? There are ways to ask this question and get answers, but they travel on specific channels. I need money and organization to travel and study on those channels.

The aliens are here. Ingo was years ahead of the loop. He claimed the following:

That the moon is inhabited by a space-traveling underground-living humanoid species that farm on the surface of the moon, in the Plato crater and Aristoteles crater. What I want you to envision is a twenty-story apartment building under each of those craters, with an inverted Coke bottle top where farming is done. Recent footage just released shows a UFO disappearing into a crater hole in the moon. In the underlying data, there are colonies of humanoids living on the moon, one of the moons of Saturn, and at the South Pole on Earth.

When Buzz Aldrin was on the moon, he could see these aliens. He switched to the medical channel and spoke to the chief medical officer, and said, "They are here. They are parked on the side of the crater. They are watching us. Watch the video on YouTube yourself."^{iv} The fundraising target is \$450 million, and that is just the start.

https://www.youtube.com/watch?v=ZNkmhY_ju8o

Ingo's case is that, as we approached the moon, we found extraterrestrials lived there, and they said they did not want us there. Then they manipulated information so that we turned away from going to the moon, and in that manipulation, hid their existence from the general Earth population. Both America and Russia—at the same time, for no reason—stopped racing each other to the moon and jointly built Skylab, a more costly project for going to Mars. There was no reason for both adversaries to do this, except for Ingo's reason. The race to the moon began as a competition between the Soviets and America in the 1960s, but by 1972, both countries had abandoned the moon as a goal; this in the face of the fact that we learned the moon had water, and you could grow crops in the moon soil we brought home.

And here, we get into the study of consciousness: how the aliens achieved their goal as seen by the man who was the one to teach us all how to remote view. But keep in mind the United Fruit case study.

Ingo states: “A rather successful attempt was undertaken with regard to TWO principal functions: To increase rather than decrease space age confusions, so as better to promulgate and rule via disinformation packages. To erect and reinforce a particular kind of planet-wide intellectual phase-locking that is data deficient with regard to the meaning not of Earthside affairs, but with regard to the meaning of spaceside activities.”^v

“Groupthink, intellectual phase-lock, can then be formed with respect to this or that information package, resulting in that intellectual phenomenon earlier referred to as mindsets.”^{vi}

“This is to say that Earthsiders do not think outside of Earthside local realities. This is further to suggest that the realities of Spacesiders might not fit into ANY recombination of Earthside information packages—and especially so IF Earthside intellectual phase-locking is deficient with regard to any Spaceside realities except those officially admitted to by science.”^{vii}

Or, as we have seen, stage-managed by NASA.

“Thus, more precisely defined, packaged information is meaning-managed.”^{viii}

Yeah, that says it. That is consciousness, our consciousness, operating on itself.

So here is the consciousness witches’ brew that is being served in this request: that belief in heaven, your heaven, is proven as is your life after death; however, it is simply fourth-dimensional consciousness, and it is replete with anything you see in three dimensions, including animals and aliens. It is a place of no lies; when communication is telepathic, you see the truth, so deception, prejudice, and such, as well as belief in a god, ends because God is the collective mind. That fourth-dimensional space is traversed by higher dimension intelligence as well. There is a lot to study here. Consciousness science really needs the money.

Earthside Telepathy Versus Spaceside Telepathy

So, the point is that there is a difference between Earthside telepathy and spaceside telepathy. Each operates the same, the difference being in the case of the second, we are being encouraged not to use it by manipulation of the general consciousness of man. In short, that information is being societally repressed by being data deficient. But it is the undeniable alien presence in our skies that makes this area of study in such need of support.

If you want to study alien consciousness as it relates to human consciousness, begin with their better sense of telepathy, which we—as is demonstrated by the communication reported in abductions—show is our lesser ability.

We need to protect humanity, and we cannot do it with weapons. We, as a race, are third-eye blind, yet we have proven third-eye data acquisition beyond any reasonable doubt.

The point here to all concerned is that to have the technology transfer you need, you need to be mature enough to use the technology. These races are thousands of years beyond us. We are suggesting ways to manage not just the technology transfer but the cultural transfer to render humanity mature enough to handle the technology. With the speed of technology change, we can say aliens are in our workspace and are hiding in plain sight. Our understanding of consciousness has to evolve at the same speed as the technology keeping both us and the aliens safe.

If we are going to package information and have its meaning managed, teaching this to the next generation globally is critical. You funding this is not just about the money but about validating the line of research. That, the contribution, has huge significance to the social causes you support and economic opportunity for not just your supporters but also your opponents. Additionally, your supporters and opponents are now fused in a common goal/defense; we are all in this together, whether we like it or each other. Funny, isn't it? But there are headwinds; Ingo says this:

Telepathy is the most forbidden element of Earthside consciousness. Indeed, so forbidden that science would rather accept reincarnation, the existence of the soul, and life after death—PROVIDED those situations DID NOT include any telepathic possibility.^{ix}

Another amusing aspect is that the funding agencies did sponsor the secret developmental work in remote viewing—somewhat on the grounds that it penetrates things, not minds. This is to say that remote viewing pertains to penetration of 'physicals,' not to penetration of 'mentals.' In any event, the principal reason why ALL formats of Psi research are marginalized, treated to energetic diminishment, or suppressed altogether is that those formats do include potentials too near the hated and unwanted telepathic faculties. So, the whole barn of psychic research must be burnt down as quickly as possible, making sure that the telepathic horses don't escape. There is one notable exception to this, and one utilized for creative cover-up purposes. This exception involves the discovery of approaches to telepathy most noted either for the fact that they DO NOT work, or because they serve to disorient and defeat approaches that MIGHT work. Thus, the concept that telepathy is a mind-to-mind thing involving a sender and a receiver has been given extraordinary publicity—and has in fact become the principal Earth-side cultural model for it.^x

“At least two observations can be made relevant to the above. First, one might consider that the Earthside retreat from Psi is something akin to protesting too much. Second, if I were an extraterrestrial with highly developed Psi skills (and which might have led in the first place to the evolution of superior technology), I wouldn't particularly want Earthsiders to develop Psi faculties. And if telepathy was an element in, say,

consciousness universal, I'd soon figure out how to telepathically impregnate Earthside human consciousness with intellectual phase-locking that was detrimental to positive telepathic-plus development. The reason might be very obvious. After all, what extraterrestrial would want Earthside telepaths penetrating spaceside affairs, especially, perhaps on the moon so near to them? Thus, in this, at least, spacesiders and Earthsiders might have something in common—the Telepathy War, won hands down so far by the Spacesiders.”^{xi}

“If the existence of groupthink and intellectual phase-locking is accepted, then the only remaining problem, or opportunity, is what information packages are to be inserted into them and thereafter managed for one end or another. However, in the light of the above, the existence of group-minds cannot be escaped.”^{xii}

Now what I am asking from Melinda and Mackenzie is not just money but to insert a new information package into the group mind. You see that information package in Proposal #1. When you evaluate the merits of this grant request, I would ask you to look to its fruit. What happens when politicians or clergy must address very real changes in our reality? What about issues like abortion, apostasy, blasphemy, or clerical celibacy? The information package I am asking to insert affects every issue.

Is Consciousness Individual or Universal?

Ingo says, “My own research into this area revealed that mass consciousness or mob consciousness research came to an abrupt end in about 1933–1935. This is to say, that it came to an end as far as public access to it is considered. It ended because of a set of discovered conclusions. Among them, that mob consciousness responded collectively NOT to rational intellectual perspectives, but to some kind of emotional empathy that was somehow subconsciously TRANSMITTED. This, however, could not be explained unless the concept of telepathy was brought into consideration.”^{xiii}

I agree with Ingo about the study of mass consciousness ending abruptly; let us meet the man and the reason why. In his world, the terms “public relations” and “propaganda” were synonymous. (Before I leave Ingo Swann, I want my reader to know I was torn between abiding by copyright rules per the Chicago Standard and paraphrasing Ingo’s words, or perhaps, going a little out of accepted copyright norms and letting you hear Ingo’s own voice. In the interest of making the scientific case, I chose the latter, and latter versions may or may not correct to whatever academic standard prevails)

Edward Louis Bernays (1891-1995) was an American theorist and referred to in his obituary as “the father of public relations.” He was seminal in the fields of public relations and propaganda.

“[*Public Relations*](#) (1945), which outlines the science of managing information released to the public by an organization, in a manner most advantageous to the organization. He does this by first providing an overview of the history of public relations, and then provides insight into its application.” ...

“But instead of a mind, universal literacy has given [the common man] a rubber stamp, a rubber stamp inked with advertising slogans, with editorials, with published scientific data, with the trivialities of tabloids and the profundities of history, but quite innocent of original thought. Each man’s rubber stamp is the twin of millions of others, so that when these millions are exposed to the same stimuli, all receive identical imprints”...

“Bernays touted the idea that the “masses” are driven by factors outside their conscious understanding, and therefore that their minds can and should be manipulated by the capable few. “Intelligent men must realize that propaganda is the modern instrument by which they can fight for productive ends and help to bring order out of chaos.” ...

“Propaganda was portrayed as the only alternative to chaos”

“One way Bernays reconciled manipulation with liberalism was his claim that the human masses would inevitably succumb to manipulation—and therefore the good propagandists could compete with the evil, without incurring any marginal moral cost.^[71] In his view, “the minority which uses this power is increasingly intelligent and works more and more on behalf of ideas that are socially constructive.”^{xiv}

Unless they aren’t...or used by smarter societies to control humans. Divide and conquer, or divide and control, it is still manipulation.

That is why everyone in America who claimed they saw a UFO was considered a “kook” or “nuts”. That was the information package inserted into the group think at the time.

This has been refined today by firms like Facebook, Reddit, and Fox News. They stratify society and make it dumber while computer AI gets smarter.

The best way to break this roadblock is to explain consciousness/study consciousness on a fourth-dimensional level. The change begins with breaking the phase-lock to open fourth-dimensional studies. How are the best alien societies modeled? How can we effect positive global change? How do the alien societies we see and now acknowledge flying by us administer governments? What are their rules? Targeting and then teaching remote viewers how to work in unison is by nature a collaborative effort and larger scale because of the number of people involved.

Using fourth-dimensional communication, remote viewers can bring back credible information. Now group them to increase bandwidth and begin to query global management questions and repair of our planet’s resources. These are programs that need to be run.

How did alien societies that we see that travel the stars get past that point of self-harm? The means of communication are open, not with radio frequencies but target group consciousness.

Pause for a moment and think of how this narrative changes the narratives of religion, gender, politics, self-governance. We are all victims of this new reality. It favors no one, but if we are all threatened, we are all in this together.

Let's look at the next election cycle to see how this acknowledgement of our place in the universe affects the evangelicals, the conservatives, our global partners and enemies.

Abortion: The narrative in this is that consciousness transcends death. If consciousness is seeking to be born, then aborting a fetus would only mean that that consciousness would seek a birth elsewhere. Why would consciousness seek to be born in a child with a congenital disease that would die in six months? Or be aborted? In the data are examples of older souls choosing to take this route because they were helping younger souls experience love and the pain of loss.

Gender equality: Since the data shows young souls tend to incarnate predominantly in one gender for the first ten lifetimes, and thereafter the distribution between genders is fifty-fifty. If you are going to live lives as both genders, then gender equality should be a given.

LGBTQI+ issues: If consciousness is electromagnetic and the body is a disposable vehicle, then that cycle of sexual change carries from life to life and explains why people feel they are in the wrong body or have sexual targeting issues from a past life. They are in a transitive state of consciousness.

Aliens: Acknowledging their existence in close proximity to us and the means of telepathic communication they use should change our perspective about fighting each other. Divide and conquer is a strategy best used if the target is unaware of its use. We, as a race, need to be more open about what is happening and aware of its dangers as well as benefits.

US national defense: By any reckoning, the US government has had dealings with aliens since Roswell but long before.

Global defense moves from a reductionist strategy to an additive strategy.

The strategy of funding consciousness science is to recognize and promote the fact that it benefits any opponent you might have, it is a classic win-win, and if three parties are involved, it is win-win-win. That includes alien societies. This study promotes open markets, global peace, new technologies, and new jobs, and all stem from this funding.

A review of this through the lens of enterprise risk management makes this study a risk we must take if alien groups are predatory. Or if there are competing groups of aliens, opening a dialogue would be for human benefit.

This entire structure and course of study needs to be laid out in a single compendium, studied, and taught. So yes, good scientists get money, but in doing so, science is advanced, humanity strengthened, and acknowledgment is the only requirement; your money does that.

I need a fourth-dimensional workshop that draws on 7.5 billion minds in unison, working cohesively on one project, and I might get somewhere. Cohesively focusing the mind with a group increases bandwidth. With 7.5 billion minds, we do not know what can be achieved until we try.

All aspects of human sexuality and experience are accepted and equal from right to left, from up to down, and from black to white. What needs to be done so we as the human species can join the galactic community?

Ingo says, "As it is, telepathy cannot exist, much less be explained, IF the parameters of consciousness are limited to the mental equipment of the biological individual. Since information is 'exchanged' or 'acquired' between human individuals in the absence of any objective methods to do so, and in that the information so exchanged results in mental perception of it, it is obvious that a format of consciousness exists that is independent of each biological human unit."^{xv}

"We might also have to wonder if their telepathy is a developed version of a telepathic 'language' that is universal within universal consciousness."^{xvi}

"A larger, much larger question eventually loomed into view: why do mass-consciousness humans, as it were, mass-consciously almost 'conspire' to avoid certain issues, and consistently so? My investigations into this matter have revealed that four general areas of societal avoidance have existed for quite some time: ***Sexuality and eroticism. Human psychic phenomena. General societal love. UFOs and extraterrestrials.***"^{xvii}

The italics and bold nature of the last sentence is not Ingo's but mine. Within human psychic phenomena, you encounter aliens, and sexuality and eroticism morph into general societal love as the fact that we travel lifetimes as individuals of both sexes. Human psychic phenomena are part and parcel of human consciousness, and we must be bold enough to acknowledge them and study them in an open and robust manner if we are to save this planet.

Ingo states, "It is with good reason I believe, hitherto almost unimagined, that all four of these areas are at least linked with regard to an Extraterrestrial abductee context which is positively awash with sexuality overtones, while the psychic nature of UFO abductee experiences is visible beyond argument."^{xviii}

Information packages that have been kept apart should be fused in our examination of consciousness, both individual and group mind.

Ingo says, "A large and vivid vacuum of information exists regarding the phenomena of group mind and subliminal group consciousness management that might be invasively influenced by various means such as forms of super-telepathy as yet unacknowledged as existing."^{xix}

So, what can we do?

The phase lock must be broken. The aliens are not just here, they are among us, and we carry their DNA.

We must manage global contact with alien civilizations outside of the government.

So here we spend \$50 million. The location we put this in is Arizona, near the Consciousness Center, and lay out a welcome mat. Before I begin, I want to speak to all of you, each billionaire, each intelligence agent from whatever country, whatever scientist, whatever alien. All of us are in this together; common consciousness would dictate an optimal solution for all.

In each area I can only glance upon, they are inadequate descriptions because there is so much to be done that it will require a team to make humanity an added part of the intergalactic society.

Methods of contact.

1- CE-5 Protocols David Greer lays them out by bringing this plan to the organization and locating it in one place we locate in time and space, a location where all friendly alien species are welcome.

2- Crop Circles Lawrence Rockefeller has invested in the study of crop circles, and clearly, many are of alien origin. We know this because of how the stalks are broken as compared to the fakes. At its core, what we are seeing is both an information package and a disinformation package arriving at the same time one covering the other. Rockefeller's research needs to be brought to the consciousness center. The alien crop circles, in many cases, are fractals, which carry information inside the information so the growing resources of the consciousness center can be brought to bear on the method of communication.

We now arrive at the most important video connection in this paper. It is only 6 minutes long. It explains what is happening with crop circles and since we sent a message into the universe and 27 years later got a response what do we say now? Apparently, there are those that by discrediting the validity of this means of communication would have us be unaware of our situation and reality.

Crop Circles are misunderstood, and information that should be public and primary is obfuscated and withheld from a variety of actors. So, we are in very short order going to explain crop circles accurately, expose the bad actors and intentions and arrive at a solution/conclusion.

To begin in 1974, Carl Sagan, with the help of other scientists and NASA, sent a binary coded message into space from the Arecibo radio telescope in Puerto Rico. The videos below will explain the process. The point here is that 27 years later, outside the Chilbolton Radio telescope in England, there appeared new crop circles. One, however, was a direct correlation to Sagan's message.

The first line of Sagan's message was our decimal system. The first line of their message was the decimal system confirming we were speaking in the same mathematical language.

In Sagan's message, the next line was our dominant element, which was carbon. In their second line, it was the chemical code for silicon, their dominant element.

In the subsequent lines, which you will see in the video, they are 4' feet tall, have large heads, and live on the second, third, and fourth planets of their solar system, while Sagan told them there were 8 billion humans there are 21.3 billion of these aliens by their own statement.

Finally, the last line was our picture of our radio telescope, and on their response was a picture of their radio telescope, which incidentally corresponds to another crop circle of just their equipment.

I have 2/ea. 6-minute videos for you to watch that explain crop circles. The first explains what is going on, whom we are communicating with, and where they are from. The second is what a real crop circle newly made looks like.

No 2

<https://www.youtube.com/watch?v=jC-OpdxmS7I>

No 3 Goes into more detail and is 12 minutes long

<https://www.youtube.com/watch?v=HYuCr6Er914>

This is a picture of the message in binary code that they sent.

In the videos look at the detail of the information contained in a real crop circle, the intricate way the stalks are tied, this is all information that needs to be decoded by our scientists.

Now going through other messages that have been sent this way you find this alien species referring to another alien species from another narrative we are presenting here. Their comments flawlessly blend with the other narrative, and both are discredited by our authorities.

So now Google crop circles, and the first thing you see is the vast amount of information discrediting what I just showed you. When I say it is a bad narrative, I think the discrediting group could have done better than two guys with boards. Look at the detail of the real crop circles and look at the cover-up. Can two men with boards do this?

The lie is so transparent and broken that this information must be addressed cohesively, collectively, intelligently, and responsibly and that is just not happening.

Is this common knowledge? NASA cannot find the aliens; here are 21.3 billion of them, and I know where they are. This is happening in England outside of NASA's jurisdiction, so we cannot blame them. But if you are looking for aliens, I would start with the ones putting up the billboards in our wheat fields. Oh, another thing, can we open the real information without the disinformation overlay so we can bring more resources to bear on decoding the layered math in how the wheat stalks are being laid down. Bring that information to the math departments within the consortium. Please. Thank you.

The ask of NASA: Support the TIFACS effort to create a consortium of billionaires to fund the consortium of consciousness scientists. NASA has asked that we listen to space. The link for this is in Theory Development, proposal number 7. However, remote viewing is not encouraged outside of the CIA's or the intelligence services' control.

Remote Hearing is an area of consciousness studies that may solve this problem for NASA. How does the science community and the NGO community bring resources to bear for an organization that has lied to us for 75 years? I understand there will be political fallout from the book being requested from the scientists, *The Standard Model of Consciousness*. That very idea reorders the political and social landscape. But your support of this proposal brings real funded organizations to the reality that we must face whether we can acknowledge it or not. Do not send us on a snipe hunt when you want us to bring back pheasants. You are asking for help. We want to help. We all need to be working on the same page of the playbook. Please NASA, support this effort and it will bring you all sorts of resources.

Here are the questions we should and must address.

Have we dissected the images of the alien equipment? Since the channel is open, can we ask questions or make the transmission of the conversation faster? Who is studying the images they send? Who is orchestrating the coverup? Oh, there are so many more questions.

Well, it is Lawrence Rockefeller funding the study but shouldn't this be done with more people and more resources? Not if you are going to keep it a secret or try to, which by its design limits the resources being brought to bear on a problem.

At this point, this paper is not even an expose; it is a real question posed to the secret keepers, at this point, why? You need more resources; the 2000 billionaires represent half the world's wealth, this is new markets and new technology access, and aliens want the use of Earth's rich DNA pool.

What happens by opening this information to the general public is that common consciousness becomes more cohesive. To manipulate an entire species, control of the information becomes critical, and loss of the control threatening to the species attempting that control.

Integrating a global response would seem a strategy that would benefit humanity, support our intelligence services, reduce hostility among us, and make us stronger.

That means scientists themselves need a collective voice where they cannot be "picked off" when presenting ideas outside the current paradigm of thought. That is why this plan, for all the blemishes that critics will find or attribute to it, needs support from the consciousness science community, which needs the support and freedom to do what UAPTF (Unidentified Aerial Phenomena Task Force) is asking us to do, find new ways to address our problems. It starts with the government saying this is accurate information and owning the encounters until it hits their secrecy boundaries. Critical thinkers would understand full disclosure is not necessary, but disclosure is mandatory and, with it, an explanation of consciousness, so this new information comes with public reassurance. Here the press release from the government should read:

"Yes, we have had contact for the last 75 years, nothing here on Earth has changed, but technology has gotten better, and maybe we can stop killing each other; there are other species thousands of years beyond us, and they do not care about us. They have been here for 12,000, and we might be able to learn something from them."

I do not want to put words in NASA's mouth, but if UAPTF is looking for new solutions, just give me some time on a radio telescope, and I will ask my galactic neighbors. I will also find out more about the other alien species.

At this point, the lie that NASA cannot find aliens is so brittle and broken that coming clean will not be so big a deal. And doing it through consciousness science will allay fears and change social and political behavior.

This is unequivocally human-alien contact outside the auspices of NASA or any governmental agency. It is aliens communicating with humans and literally putting a billboard in front of the radio telescope. It is an open channel or conduit to communicate with an alien species. But their communication to us references another alien race that they say is misleading us. They are acknowledging that there has already been human-alien contact of a race other than them, and this drives home the need for exo-political courses taught at our universities.

The disinformation campaign would have you believe two men with boards can make a crop circle, and they have. But they cannot make one like this overnight, and that is the point. This is real. Some of these crop circles are Julian Sets, which are math fractals. The information contained in them needs to be processed as a team, and by watching the video of the close-up of the crop circle, you can understand just how much information is being conveyed. Please study this and one important thing. Now that the line of communication has been established, what are you going to say next? Do you understand what they have said to you?

Scientists, do you want money for studies? Publicizes this and ask the public what should be said. Now as a strategy, you are normalizing the conversation and bringing humanity into an intergalactic mindset. You are also opening more lines to funding by more clearly articulating the problem. At its core, all of this we are proposing is just other ways to study not just human consciousness but all consciousness.

Now Google crop circles, and what comes up is the misinformation overlay to discredit real communication. In fact, they are responding quite clearly to a message sent into the cosmos in 1974 written by Carl Sagan, among other scientists, including ones that worked at NASA.

So why the crop circle coverup? Is the disinformation campaign diminishing our own ability to defend against extra-terrestrial threats? Or to keep us separated.

What is collective human consciousness? What does it look like? How does it operate?

Here is an answer. Some of us know this is true; others of us know it is true and do not want others to know. But if we all knew, then we would have a collective response rather than a segmented response by a special few. Institutionalizing this teaching is a cognitive change. That change of consciousness has geo and exo political, and social ramifications. It is funny, really; households will be asking do you really want your daughter to marry a Martian? Or a Reptilian, for that matter? But normalizing that kind of question normalizes the human response to aliens as just being other humanoids, which they are.

Let's look at Sagan's message. You can view it in the video. In binary code, which is explained, he stated that humans have DNA, the size of the average human, our location on our planet and solar system, and a diagram of the radio telescope we used to project this binary code into space. Twenty-four years later, a crop circle appears that is the replica of Sagan's message. This alien race locates their planet from their sun; they live on the second, third, and fourth planets of their solar system, they list like Sagan did their total population, and lastly, and importantly for our discussion, they diagram their radio telescope.

Now we have a clearly defined line of communication with an alien species outside of NASA. What do we do with it? My first question would be about expanding knowledge of their equipment to make the channel wider, but that is me. What is our collective response? What are the lost opportunity costs? The messages, if you look at them and can filter out the two clowns with the boards who are providing the disinformation campaign is they refer to another alien species here on Earth. If this is game on, then where is my team? It is segmented, creating lies and mistruths to hide it from the general population, thereby preventing a common consciousness response. If you do not think this is about funding the study of human consciousness, you are dead wrong. But if we are to do this honestly, then this is what we must face and acknowledge that the greatest threat to us may be ourselves.

This can all be changed by our scientists collectively acknowledging this reality and the billionaires independently funding the study of consciousness. While some intelligence service secrets will fall, the intelligence services will benefit far more from this change than any damage it may do in the short term. Scientists can explain this to them. The coalescence of the information, we have one group of aliens here and another there, is not unprecedented in human history. Look to the British exploration societies of the late 20th century that gave us great Hollywood exploration movies.

All the science here hangs together, and aliens are literally putting up roadside signs that are huge, intricate, and filled with information. Watch the video inside a fresh crop circle, are we analyzing the way the crops are tied? Are there patterns? Are we looking for layered information? Are we addressing this collectively, cohesively, and intelligently?

By doing this, institutionalizing the teaching, it supports our intelligence services and our defense posture. It reduces friction between us as well as opening new intergalactic markets, which are closer than many think.

The Ask of Lawrence Rockefeller is to bring what he has uncovered in his research and for the consciousness center to help fund future research endeavors in this area. To publish in the Standard Model of Consciousness, which should list alien species as they are conscious and trying to contact us. In short, Mr. Rockefeller do what Teddy Roosevelt would have done. Catalog it, publish it, and brashly proclaim what he has discovered. I want more than your money, sir; I want you to stand up and say directly that this is absolutely true and we must do better and then give \$5 million dollars to the consortium, make the check out to Hameroff if you want but you see we are trying to build structure and fund 50 \$100 thousand grants to come up with the best response we can manage.

What happens if we get better information on their equipment and now have an open channel? Your money can make that happen. Ultimately the lie that we are alone will collapse, and by funding this, we are ahead of the curve. Please help.

3- Go to Mars. Not NASA but the billionaires. With Bezos, Milner, and Thiel alone, they could fund it, but why? Because they are going to excavate the face on Mars. The CIA has proof positive, as done by the NASA scientists themselves, that 100 – 300 million years ago, there were nuclear explosions on MARS that ripped the planet apart. Some Martians survived, and we see proof of that in the NASA photos from the rover.

The ask of Uri Milner Your donation goes to laying the plans with the other billionaires and scientists to go to Mars to do the archeological dig on the face of Mars and the surrounding pyramids; yes, there are pyramids at that site. Please watch this video explaining it from the why files. The alien artifacts on Mars are compelling, to say the least.

Why Files

Alien Artifacts on Mars: What NASA doesn't want you to know

<https://www.youtube.com/watch?v=q9Nuy7mFlsE>

AJ and Heckle fish, *The Why Files*

The CIA even knows where the nuclear explosions took place, how large they were and the site with the face is between the two main explosions.

With Earth teetering on the edge of a nuclear exchange in the Ukraine, could this research be timelier in looking at a lose-lose situation here on Earth? Mr. Milner, this request is more than laying the plans for a commercial endeavor to go to Mars; it is an examination of how to protect ourselves from ourselves.

4- Initiatives in contact: the South Pole. Admiral Byrd contacted aliens who live at the South Pole and are dimensionally nonlinear. In short, they live on Earth but can access an adjacent dimension. Send a delegation to know on their door. Respectfully. They do not want us there, but a different presentation may be well received. The US knows there are there. This is a much larger story than I am telling here.

5- Create a welcome center with a landing pad. The initial design of the landing pads should mimic the layout at Tiahuanaco; use the image with the ground penetrating radar, and you will see the landing pad aliens built more than 10,000 years ago. Welcome to Earth, our intergalactic welcome center. They watch us; they will know. If we build it, they will come.

At the welcome center, we should house the following centers for specific applications.

Technology Transfer Center. It is self-explanatory, and we are asking for Mark Cuban's involvement.

Legal Applications Center. The beginning of intergalactic law. Mr. Culverhouse, intergalactic law is an entirely new field of law, and because of the consciousness center's work, your influence here would be felt in Alabama. Science would backfill the common consciousness in that state. So, **the ask of Hugh Culverhouse** is to fund this center through the University of Arizona Law School in applying nonlocal consciousness and intergalactic law to the study of law here on Earth. What is the intergalactic standard that Earth must meet? On banking rights and legal rights, this needs more of an explanation of how we proceed. Mr. Culverhouse, what are the real estate laws on the moon and Mars? There is so much to be done; please help.

An initial \$5 million dollar donation should be made to fund 50 \$100 thousand grants to study this aspect of consciousness and individual rights. Please help.

AI Recommendation Center. AI, as it matures, maybe the best operating system to protect humanity.

Remote viewer training center. This is an imperative and an entire dissertation in itself. The beginning is what is being proposed to Jennifer Pritzker.

Government to plan and provide an intergalactic TSA center.

Dimension and Linearity Center (Bounce Theory). Again, more information is needed than I can provide here but goes to the contact with the aliens at the south pole.

Gender presentation and variation decisions are individually based, both for humans and aliens. Sexual diversity is a galactic condition and restrictions that used to be imposed on gender here on Earth are no longer applicable. Let us add this thought to the gender discussion here on Earth.

We must create a new information package that scientifically lays out our place in the universe and how understanding our consciousness is key to understanding our place and what is available to us. Collectively, all the scientists can do together what no one scientist could do alone.

So, Melinda and Mackenzie, the object of your donations are to catalog and educate, and to do that; we need major resources for global change. I do not have to tell you the arc humanity is on. I need \$50 million for this foray into consciousness research, our conscientiousness. I have the best scientists in the world; through the

consortium, I have all the scientists in the world. They need your money. Let them design the systems working in a bullshit-free environment because we can fund where they, and ultimately, *we*, will go. Please help.

So, you would not be alone in the endeavor of sponsoring cutting-edge research, but honestly in this specific endeavor, you will be the first to politicize it and infuse this sector of consciousness research with energy by coalescing the aforementioned endeavors in one place to synergize the result.

That is why the politicization is important to our opponents and ourselves, and this case must be made to them. This is our reality, and both our opponents and us are fucked equally by it. That we have common interests should be understood by both parties. Let us use enterprise risk management models to protect us all. This thought is implicit in this request.

Understand how we should communicate to fourth-dimensional channels. Fund targeted remote viewing initiatives into the nature of fourth-dimensional landscape (see the map of the afterlife on the TIFACS website.) Teach this model. Catalog, formalize, explain, and connect. Then put it out in a Marvel comic book form.

This is the area that needs to be studied if Earth is going to mature into a galactic citizen in good standing.

Closing argument for all proposals that societal change toward good begins with our turning our sight outward and acknowledging our place in the universe among twenty-five to fifty sentient species, and our history of at least 12,500 years of alien presence. Now we acknowledge that we have galactic neighbors who live nearby. For God's sake, let's act like we are an intelligent species and study the means by which they communicate, and we do not: consciousness.

If you think this request is unusual, then refer back to the fact that the US government just admitted they are looking for new technologies to address this problem.

So yes, I need the money, but I need the information package this amount of money will provide, injected into the common mind, an **ideological vaccine**.

The "ideological vaccine" could be called by Bernays and Swann, inserting a new information package into the common mind.

We are, in essence, thought-wise, a threat to ourselves. To be no threat to them is to make us more appealing to interact with. You cannot build an interplanetary society that feeds on itself through the Putin's, Trumps, and Gadhafi's of the world. A major reallocation of resources begins with de-militarization, and no, that means zero nuclear weapons to join the interplanetary community. Just ask them, they will answer.

Saving Earth. You see, the aliens and us; we are all in this together.

Humanity has the promise and resolve to become a galactic citizen and not a barbaric warring set of tribes.

What we must look for in this area of consciousness is the differentiators of governance. If these societies are 4,000 years more technologically advanced, they are 4,000 years more socially advanced and have moved past greed and prejudices, which are impeding social action.

Melinda Gates, Earth must be taught about other planets and government structures that produce better results than what we use now.

So, I do not want just \$100 million; I want you and Mackenzie to announce it at the same time. And let Fox News try to deconstruct this. Aliens monitor our news channels, and for the aliens, it might be a relief to have someone smart to talk to instead of the politicians. There is no guarantee they will answer, but funnily enough, it meets UAPTF's (Unidentified Aerial Phenomena Task Force) mission of finding new technologies.

So, to start with, I am asking Robert Bigelow in Proposal Number Six to run TIFACS. He can be the fiduciary to distribute the funds to the people and institutions named in the plan.

This is not imprudent, as all that is at risk is the first million; the second is controlled by you with a fiduciary agreement. The people getting the money and designing the projects are the best, most organized consciousness science consortium in the world.

So how is this going to work?

RFF #10. TIFACS, \$1 Million

What is going to drive this change is organization.

The Institute for Advanced Consciousness Studies (TIFACS) gets a \$1 million founder's grant. Its mission will be to manage the grants and collect and correlate the data for dissemination to all organizations who would benefit from said information. Its job is to implement the plan to raise \$450 million as presented in this proposal.

The Scientific Organizational Pyramid

TIFACS presenting funding availability to the consortium of schools and organizations through the Consciousness Center at the University of Arizona and additionally through any university that houses a chair of consciousness study or a related field that the study of consciousness would encompass. The choices for programs to be funded are made through and by the scientists themselves in a collaborative manner so that a full understanding of human consciousness is drawn to the best of our ability now but encompassing all aspects of how our consciousness expresses itself.

In a sentence, TIFACS gets 1% of money raised as the fundraiser and 1% to manage as discretionary grants. That will be the pattern through every request in the remaining seven grant requests.

This will start by consulting with Dr. Hameroff at the Consciousness Center consortium and distributing that information throughout the network but will also make that available through Robert Bigelow's judges and through Lawrence Rockefeller's organization.

By way of explanation: Robert Bigelow ran a contest in August of 2021, asking for scientific proof of consciousness transcending human bodily death, and Lawrence Rockefeller is funding research into crop circle communication with aliens. I have not touched on that in the interest of brevity and simplicity. However, the underlying data is more than compelling; like the odds against chance calculations in the subdisciplines in the science of reincarnation, they point to certainty.

Jennifer Pritzker Request

I know you are not accepting grant applications at this time, but need cannot wait for largess, and it must act on its own. This request is one of several to try to fund consciousness science. The one to you is special though.

There is no one I could ask who has your qualifications. Decisions you have made spring from a place that is not here, but express themselves here because, as Plank would say, consciousness is primary and matter derivative. So, I know you know. I want you to run a military operation there. You have that qualification as well. Let me tell you how.

With your \$50 million grant to TIFACS, I want you to put me on the flight deck of the alien spacecraft in our airspace.

Here is how:

1. Establish a website for real-time sighting from anywhere in the world; you can log in and report a sighting of where alien space craft are.
2. Let Stephan A. Schwartz establish protocols as he did in remote viewing.
3. Use IRVA as the control group.
4. Coordinate with AATIP/UAPTF at the Pentagon.
5. Establish a private global computer network for anyone, anywhere, to log on and report UAP/UFO activity where remote viewers are notified in real time; following Stephan's protocols, view, register, and report, so we can begin to form an aggregated view of what is traversing our skies.

This is already in effect at MUFON, the Mutual UFO Network, at <https://mufon.com/>. Their reach though is limited, as data from weather collection sites does not fully filter into their database.

6. When we make contact—not *if*, but *when*—the first question we ask is: “Does time have mass?” Whether the answer to that question is *yes* or *no*, the next question to ask is: “Explain nonlocality.”

In order to properly remote view, we need coordinates to view ongoing events—information the US Navy can provide in real time. I need a computer system that people globally can log in to and provide real-time video, coordinating that information so our observers can be notified and remote view. So, while governments—starting with the US government—can provide data, so can anyone, anywhere, with the proper clearance and log in.

To create that pool of candidates, TIFACS has designed a recruitment program as simple as its website, explaining what I just explained to you. Here is the recruiting banner:

<https://continuum-designs.com/iasor/clairvoyant-space-corps-15oz-mug>

It will interconnect their one point of data collection in Washington state with a global network using their protocols. There are ways to filter remote viewing candidates.

7. Finally, all of this will go into an accessible database to catalog what we believe are over twenty species of visiting aliens, over 200 million abductees, and a variety of different types of spacecrafts.
8. The net result of this effort is to expand communication with the alien species who have been here, visiting Earth, for 10,000 years.
9. While organizations like IRVA, MUFON, and CSETI all cover some aspect of this effort, they are not connected cohesively and are all underfunded. Additionally, the governments of the world mishandle and hide their own information. This affects us all, and a structure with open architecture and complete information is imperative to making an intelligent, cohesive response to the emerging set of circumstances.

There are two groups we need to organize to do this. First are the remote viewers. I want to use the International Remote Viewers Association (IRVA), as the control group. The people I want to design the program are Stephan Schwartz and Dean Radin, and the implementation of that design can come from the Noetic Institute. In fact, your entire donation can go directly to the Noetic Institute, if they accept ownership of this project.

There are problems to general remote viewing because remote viewing done correctly needs coordinates of what you are viewing. For that, we turn to the Advanced Aerospace Threat Identification Program (AATIP), which can give us coordinates of these Unidentified Aerial phenomena (UAPs, formally known as UFOs) in real-time. This is a limiting factor at the ECETI Ranch because they may be inserting information packages into the media stream unfavorable to humanity.

What I am asking you to do is jumpstart a program that will benefit the world. Where this will lead from this beginning is the program at Stanford that ran roughly from 1972 to 1995 will be reignited, and the expansion of that funding will come from the thirty Stanford billionaires who will be asked to contribute \$5 million each to this program through the TIFACS program.

Now, the program to start this and recruit viewers is already set up. You can go to www.tifacs.org and see the beginning of what we call the Clairvoyant Space Corps.

The experiments that lay the groundwork for the method we describe is different than the landscape of our observations or Hameroff's work in determining the mechanics of how this works. There are protocols that we can use, like meditation, to transverse the landscape we see, and in doing so, access information we could not otherwise get. These protocols are too little used and examined only to define them rather than use them. In using them to our best abilities, we gain greater access quicker and evolve more quickly. In 1982, the Chinese went to look for people who have greater cognitive skill in this area. This is evolution at work. (See Stephan's protocols for a complete list of the modularity's.)

We are not addressing and teaching the science here; we are explaining how the landscape is supported by our understanding of the quantum nature of our consciousness and its interaction with matter. And what we need to do to fund it, understand it, and accept the consequences in our lives.

The only way to have a standard model of consciousness is to connect the dots that are mathematically proven.

Now, within the ranks of the organizations you support are retired military with the qualifications and expertise needed to undertake this effort and make it happen.

We are dealing with both extraterrestrials and trans-dimensional creatures, and in some cases, extraterrestrials that cross and occupy a manifold of dimensions.

They do not know how to deal with humanity, and humanity does not know how to deal with them. They see governments of the world suppressing information and profiting from it, but they do not see society coalescing and maturing.

Only through science and scientists organizing and independently contacting extraterrestrials can we, as a race, advance and enter relationships with other species.

If aliens wanted this rock in space, our earth, they could have it at any time. The preponderance of the evidence indicates their presence on earth in the remote prehistory of our race, and their continued presence here now.

There are enough planets in space; they are interested in us. It is time science talked to them in the manor and on the wavelengths they use.

Welcome Center in the Arizona desert. This needs more than \$50 million, but that should be sufficient to pay for the first architectural drawings and other minor distributions requested in this proposal. Driving this is our own global consciousness we, as a species, must recognize in ourselves, and it is transcendent of space and time. A common consciousness is a consensus. They can currently communicate at that level where we currently cannot. The danger is not the aliens; it is us.

Orders of magnitude for money for this proposal:

\$50 million requested here represents the architectural plans cost.

Typically, in construction, that would lead to a \$500 million build-out, with architectural being 10% of the total cost of the project. This type of development and timeline runs sequentially with Earth's universe outreach, and the phase after the one we just mentioned would This entire proposal Number Two nets down to one project commercial outreach into space. Consciousness must lead the way. The Look Before You Leap protocol described in both the introduction and Proposal Number Seven for the US Navy applies here.

TIFACS.org

Proposal #3

The Common Constitution

Funding a cohesive program of consciousness study and its application to societal laws

The explanation of this proposal in a thought. Constitutions globally need to be rewritten collectively to unite a common consciousness in mankind; here is how and why.

The purpose of this proposal and its funding go to writing a global constitution that all countries can adopt one plank at a time. You will find the list of countries in the appendix. The goal is to standardize wellness in an intergalactic environment. In order to be of more value in the universe, we must do better here without causing upheaval during the transition and coalescing human consciousness to a logical and caring standard. This new demountable constitution must address Ingo's points of separation and unite them.

"A larger, much larger question eventually loomed into view: why do mass-consciousness humans, as it were, mass-consciously almost 'conspire' to avoid certain issues, and consistently so? My investigations into this matter have revealed that four general areas of societal avoidance have existed for quite some time: ***Sexuality and eroticism. Human psychic phenomena. General societal love. UFOs and extraterrestrials.***"

To begin with, his points, sexuality, and eroticism are LGBTQ issues, all about acceptance. With the science showing we transition from life to life in different genders, then the constitution should include acceptance, support, and protection, something Denmark would easily put in as a common plank, but Nigeria would resist.

As more countries accept this plank so the world unifies on a standard of general societal love. In an intergalactic environment, infighting among ourselves is counterproductive. The last dog standing is a beaten, exhausted animal ripe for picking. A pack of dogs standing together is a lot tougher to deal with. But they also protect each other.

General societal love can be expressed by taking the money spent on the war in the Ukraine and feed and educate the world. Bankers can effect the greatest change here by limiting resources to aggressors. The corollary here for bankers in an environment where trade goods are being opened to and from the universe making the earth a good market to trade in benefits the bankers, then everyone else too.

Human psychic phenomena are common to all humans, but humans are not interconnected. Let us say there is a telepathic language aliens use that we cannot, not that we cannot have it but are currently kept from it. This understanding of 4th-dimensional thought transcends every religion everywhere, honors and respects each religion, and acknowledges they are all in the 4th dimension, so while heaven is now proven, so too is the migration of the soul through different genders, different religions, and different lives. Religious laws like apostasy, blasphemy, and celibacy all go the way of the divine right of kings and fall to an archaic past as they have no place in the future except to represent the heritage from whence we came.

Regarding UFOs and extraterrestrials, the acknowledgment societally and globally that they are here and present and have been and that by our actions, are seeking contact and help, acknowledging they could destroy us at any time but have not. That help can heal the world.

Finally, this constitution should be written by systems engineers. The American Constitution needs to be written to remove gerrymandering. Consensus is something the common mind produces for self-protection. That imbalance that gerrymandering introduces threatens us all by keeping us apart.

Outline

This is a twenty-year development program under the College of Social and Behavioral Science to create a common constitution that is demountable. That means its planks or articles can be adopted by the 195 individual independent constitutions/countries gradually. These articles will be driven by two things: first, a best practices model humanity creates, and then as AI becomes more intelligent than us, we use that greater intelligence to our advantage. This allows us to continue a decentralized structure of government that harmonizes with the best way we can manage ourselves and our world.

By producing this document and publishing it, politicians globally can work in concert to produce a better local environment without having to create the best model of the constitution independently.

Incorporated into the structure of this is the beginning of Intergalactic Law. This common constitution project is foundational to global consensus, random number generator coherence, and remote viewing outreach. In short, this effort is the result and a manifestation of our growing global consciousness asserting itself for its own protection. This is how the Institute for Advanced Consciousness Studies (TIFACS) proposes to address this problem. Fifty million dollars gets spent here, and again, consider the fifty million paying for the architectural drawings; the project's real cost is ten times that.

To be successful, we must conflate individual rights with individual banking rights. What is good for one is good for all. This impacts countries in the third world that do not have the intellectual resources to mount such a project in terms of the law, but international banking companies can impose those standards. Local production can swiftly turn to intergalactic export.

This standardization can lead to Russian and Chinese entry into NATO, but organizationally, would have to move away from the kleptocratic models of authoritarian rule. Global consciousness is a consensus, and at its core, both democratic and self-caring. If we are to advance as a species, we must have a roadmap to stop feeding on ourselves. This is that roadmap.

At the end of the day, this change in the model of Earth's governance anticipates and incorporates intergalactic law and commerce. It is the structural change or rebirth, if you will, of the consensus of how to run this planet considering the commercial intergalactic spaceport being proposed in Proposal Number 2. The model of governance we are trying to build with this proposal incorporates the consciousness of the community, so informed consensus leads the way.

The common mind operates through democratic values to produce a consensus. Our political structure must embody that scientific fact. If we do not turn a united face of humanity toward the universe, we are and will be nothing but a backwater planet with a backwater race.

This effort needs to lead with global banking standards, and those standards applying to all lead to civil rights in third-world countries. Standardize constitutions to a best practice model, and you increase productivity and become an exporter to the universe.

The simple explanation: we have made extraterrestrial contact. For us to enter an intergalactic community, we must revamp our laws to new conditions. Countries all have their own laws and comply with international treaties. The same thing will happen here.

The intergalactic laws are written by societies far in advance of ourselves. To that end, we should look to adapt to their standards and, in doing so, harmonize constitutions here to produce our best result to respond to new threats and opportunities we face collectively. A new disease anywhere infects us all.

The common mind is a consensus, which means we all agree on something, which means we have been individually polled. The common mind is democratic by collective self-defense. This principle operated between countries, and this is now morphing in a planetary way that this proposal is addressing.

To that end, we will endeavor to write a demountable constitution with an industry best practices mindset. To try to overthrow governments here on Earth is to reduce productivity. Each article of the constitution we will produce is the aggregate of the best model we can find here on Earth and elsewhere and will be guided by artificial intelligence so as to find a way to produce the best results. Each plank can be adopted by each country as they will, with the goal of harmonizing all constitutions to produce the best result for those governed.

AI in 2035 will be more intelligent than us. It is simply an algorithmic progression. What is being proposed here is that we solicit two different algorithms for governance, as embodied by the Heritage Foundation and the Brookings Institute, and then let AI blend the two models after it becomes smarter than us, estimated date 2035.

We are not imposing our will on the universe; the universe is imposing its will on us.

Charles Koch is being asked to help rewrite the Russian constitution to bring it in line with Western constitutions, where leaders retire from public life rather than being overthrown or dying in office. This is not to overthrow the Russian government; rather, it is to leave the public officials in place and institute a freer model to improve commerce and health. The goal is to provide a level of benefit to their population comparable to that of Finland. While the initial ask of you is to help re-write the Russian constitution, the underlying ask is to help design a demountable constitution that will harmonize the world's constitutions to facilitate trade and the safety of economies.

A premise to consider: there was a TED Talk that said there were, by mathematical analysis, 227 decision-makers in the world. They act collectively and cohesively at moments, but at this moment, that is what they must do. I am asking you, Jamie Dimond, and Hugh Culverhouse, to fund this because of the gut punch coming in the next chapter. This is how collectively and cohesively we must address a situation that threatens us all—you and I and anyone else equally, regardless of station. The win-win strategy this book proposes benefits all and protects us.

Now some math: there are about 2,200 billionaires in the world. There are 227 decision-makers who determine policy—my source is a TED Talk on how that policy is made and shaped. Of the one hundred billionaires in Russia, it is estimated they have stolen \$1 trillion from the Russian people. None of them

understand the changing events in alien contact and emerging consciousness science. They collectively own the media, the politicians, and the banks but have no thought to how to manage our planet and our future cohesively, given the changing conditions, threats, and opportunities. This request is to formalize a plan of action to save the world.

What follows is the TIFACS letter to Mr. Koch.

Mr. Koch

My name is Bob Good. I run an organization called The Institute for Advanced Consciousness Studies (TIFACS), and I am asking for a contribution of \$50 million and billionaires' involvement in a project. I want you to help lead a rewrite of the Russian constitution. I want the Russians to know why and how, and I want their cooperation collectively and individually.

The proposal here is simple. We take all the constitutions of the world and determine which countries have the highest wellness scores—which peoples are the happiest, healthiest, and wealthiest populations—and look at common points in their constitutions and political makeup. The Scandinavian countries rank the highest; countries that have large emigration pools are typically the lowest.

I want to assure you that this is no joke, and I want to explain how, why, and who else would be involved. Attached to this cover letter is a proposal to McKenzie Scott that includes “asks” of Melinda Gates, Bill Gates, Mark Cuban, Robert Bigelow, Jennifer Pritzker, Ron Baron, and Elon Musk. Collectively, they are being asked to fund consciousness science for \$450 million. The money goes to colleges and universities specifically studying aspects of consciousness and participating in the symposiums run through the University of Arizona Consciousness Center, run by Stuart Hameroff, recipient of the Nobel Prize with Roger Penrose for their work in microtubules in the neurons of the brain. When I explain the how and the why, you will understand the transcendent moment we stand at.

The How: The way I want you to begin rewriting the Russian constitution is to hire the Brookings Institute to write the preliminary draft with the instructions to make it an aggregate of the constitutions of the NATO countries. Its goal is to mimic the metrics of the Nordic data model of social welfare, which rank in the highest tier of Western countries. I want this as a starting point to present to the other Russian oligarchs how to remodel their political system.

Look to the loss of money and opportunity this last Ukrainian war cost all of you. This will continue to happen in totalitarian societies where consensus is overruled and personality is more important than the economy. There are only ninety-six to one hundred oligarchs, and presenting any plan to structure Russian politics to their economic benefit would be novel; this effort is from the consulting firm they did not ask for but need badly, not just for them but for all 2,200 billionaires in the world.

As this is being written, the number of Russian oligarchs continue to fall through attrition. This is a real application of the science of reincarnation as a new model of global governance is borne. What is happening to the Russian oligarchs could happen to us all. Ben Franklin said, “We all need to hang together, or, most assuredly, we will all hang separately.” That is an example of a democratic consensus.

The remaining Russian oligarchs must cooperate with this effort, or they could be the next victim of autocratic rule. The consensus answer is that the Ukrainian war should not have been fought at all. The decision-making structure needs to be changed by changing the model that produced that result. TIFACS is asking for your help

and cooperation in creating a new model of the Russian constitution. At the end of the day, this is a warning to all oligarchs and billionaires.

To be clear, this is not asking to overthrow their government. This effort should be led by the politicians themselves, but the overall structure is to foster economic stability, growth, and an orderly and regularly scheduled transfer of power.

The Why: Why they should do this is explained in the attached proposal: to fund consciousness science and the transcendent nature of what has been proven through a body of evidence, we need to expand.

1. There is a proven continuity of consciousness that transcends death, and we come back to live serial lives.
2. Aliens regularly visit Earth now, and the documentation is so overwhelming that governments classify it and mishandle it. NASA has documented over 5,000 planets, and there are alleged to be between twenty-two and twenty-four humanoid species that visit Earth now. The consciousness proposal attached here addresses direct private-party communication.

This vacillation deals with their current lack of how to deal with the emerging science of consciousness.

Enterprise Risk Management: In one turn of a generation, Earth will be a net exporter of life into the universe. It will need an educated and healthy workforce to achieve that. People then become an export themselves. You may be among them.

A meeting with you and the other one hundred Russian oligarchs to instruct the politicians what to enact literally will change the world. This proposal is not to dethrone Mr. Putin. Rather, it is a suggestion for him to retire to his yacht and be left alone, with copious amounts of money. He can come back and run in an unriggered system, and once that system is unriggered, Russia can join NATO. This process begins with this proposal to you, and it will stumble fitfully to its inevitable conclusion because as much as the governments are trying to keep a lid on it, aliens are here, and our own governments are mishandling this badly. It's not Russia against NATO; it's humanity with the ability to leave planet Earth.

So, the politicians cannot make this change, the Russian army lacks the expertise, and outside pressure will not work, but those that own the system—you and the other oligarchs—can make it better for yourselves, and that will make it better for everyone else.

The lack of war should usher in a period of increased productivity for export off-planet. All the stand-alone renewables in manufacturing—eco-friendly housing and devices—are the basis for colonization. Simply look to Amazon and Tesla's space ventures, and with one technological change, we cross the universe. It will happen in my grandchild's lifetime and your next lifetime, which by all measures we can currently make, will happen between five and fifteen years after your own death.

Do the one hundred of you want to come back to a robust green planet or a shit-hole planet mired in war that fosters a lack of education and stupidity? I face the same issues that I am presenting to you here personally. The ask of me is to send you this proposal, so collectively, we can be the difference.

Charles, I am asking you for your input in designing a global system of management given the enfolding events in both consciousness science and the factual basis in which we now have to acknowledge that aliens are here

in our present. We are no longer 195 countries; we are now one planet facing the consciousness universe embodied by our visitors. I am asking you to do enterprise risk management on a global scale.

I am asking you to do that in two ways.

1. Help write a demountable constitution. Of all the people I know, you, above all, would know how to tweak and manipulate a political system. The two groups to help write the constitution based on wellness are the Heritage Foundation and the Brookings Institute, and their combined metric is what determines the best constitution.
2. To help propagate this common constitution, I want you to help facilitate the distribution of the educational material being put out by our education department. This material would go along with the constitution in giving the bottom one hundred countries of the world good, sound science for a worldview, as well as a well-designed constitution that they themselves could not produce. It also has the benefit of the interconnectivity of laws such as tariffs and trade structure.

What defines the Heritage Foundation is self-interest. The problem for the Heritage Foundation members about consciousness science is that their paradigm changes the minute they understand that their very own consciousness will transcend their own permanent death. Strangely, that brings the alien problem into a different focus because that very fourth-dimensional space in which their consciousness will exist as a waveform is a dimension humanity has to cross in order to do interstellar travel. The good news is that you can make a lot of money from these developments. Here is how.

Earth, to this point, has been a zero-sum game; one wins a piece of territory, one loses a piece of territory. This opens the galaxy to exploration within seventy years, per the predictive science presented. So, you must bring order to Earth to maximize the resources, and in that, there is money to be made. Order is not enough because of the resources needed for extra-planetary growth. You need intra-planetary growth—feeding programs that have been an anathema to this foundation, like guaranteed income or universal healthcare.

What is needed is a best practices constitution for all countries to follow. That means opening markets here on Earth so we can access their output. A constitution that creates standard order—and this constitution should be designed on a best practices format, just like the best practices you put into your businesses to maximize profit.

People in this model are a product. Given the training needed and resources needed in this endeavor, then wellness needs to be built into the model in order to increase profit. It is the resultant metric that drives this hypothesis and plan.

In order to increase resources and market, banking integrity for the safety of all our assets needs to be institutionalized and protected. There is much to be done. The idea is to do good while doing well.

The alternative of profiting from division and greed leaves you alone and exposed when something game-changing threatens us all. You are being asked to design a constitution that is demountable. By that, it means that any government could take an article of the common constitution you are being asked to write and put it in their constitution, in sections like healthcare, education, public works, and police management.

The idea is to improve the efficiency and output of underperforming divisions in a conglomerate or underperforming countries in the world by providing them something they cannot provide themselves: the work product and analysis of the best form of self-government.

This is directly derivative of the science of reincarnation, the science of consciousness, and the science of self-care and protection. This is in the Heritage Foundation's self-interest.

The model produced by Brookings and Heritage goes back to the College of Behavioral and Social Science to be evaluated and study how it can be implemented.

By producing diametrically competing algorithms—one from Brookings and one from Heritage—we produce the bandwidth range of competing interests and then let AI act as the arbitrator to assess and explain its result.

Society will still be controlled by the one-tenth of 1 %; however, it will be run better and more efficiently and be more profitable and more benevolent. (That last one is self-interest.)

TIFACS has no interest in changing politicians or who is in power. TIFACS has an interest in creating the best plan by the best minds, with all peoples contributing as to how to deal with an emergency—the warming of the planet that we ourselves have created by our collective actions and must defeat collectively or die together. The older people will not live to see victory. To the young ones under thirty, you are headed for seventy years of an increasingly hellish place. So, the International Association for the Science of Reincarnation's (IASOR) proposal here to restructure the governments of the world is non-negotiable.

This means that every opposition party in places where governments are repressive and unchanging should adopt this platform as a means of measured change in your country.

So, what TIFACS has done is surveyed those countries that are the best run—the ones that peoples want to emigrate to—and taken an aggregate of their policies, so countries, where people want to emigrate from can have the same metric as those they want to emigrate to.

Look at the list of countries in the appendix by global population: 116 and 117, the Congo and Norway. They are virtually the same size population-wise, but on the wellness scale, Norway far exceeds the Congo.

Look at the countries in the attached list from 100–195. Ask yourself: do these countries have the resources to create the best practices constitution we are suggesting? They lack the resources. That is why the help of billionaires everywhere will support this effort because not only will this bring peace and prosperity, it will bring job opportunities and be a market creator for greater wealth.

Constitutions impose structure. TIFACS seeks to prevent these wars as being destructive to all of us and contributing to global warming—think burning oil fields in Iraq.

Protection of the minority is the responsibility of the majority. If the generation of children were taught this in schools with a curriculum, they would not have grown up to be the adults that committed the atrocity of ethnic cleansing. There is long and accurate science that goes into the shaping of healthy ecosystems, ecosystems where dominant species have wiped out other species leading to wasteland scenarios. That structure must be brought forth in how we govern ourselves, so the protection of minorities has to be a staple in how we choose to govern ourselves; this common constitution must reflect that, and its citizens must understand the benefits of it so that they can ask their leaders to adopt it. It is those countries that show the responsibility for self-government and education that should be at the front of the line to help save us from the coming disaster.

If you are going to make a plan to do this, it needs to be the best plan we can make by the smartest, most vetted scientists—not corporate lackeys—that we can have.

So, freedom of speech, freedom to dissent, and protections for civil disobedience must all be incorporated into our common constitution.

These protections must be accorded to all minorities because this protects our collective diversity.

Structure for change and term limits are built into the constitutions of the “weldest” countries’ constitutions.

Health care and privacy are provided and protected. A free press, an independent judiciary, and religious freedom are incorporated into the governmental and social structure. The constitution requires the government to run the education system and courses on what IASOR is doing globally so that groups of citizens can do that work locally and is included in the education system, so we can work cohesively together to save ourselves.

This will bring the best practices of humanity to each area. The people in power will stay in power, and in the new form of government, will be just as successful as they were before. After all, the people in the “weldest” countries are even more successful than those at the bottom of the chart, so while the adoptees of our standard constitution may be afraid of the change, they simply need not be. Smart, successful people are smart, successful people.

But why should every country have to, by trial and error, find its way to the best constitution? And the guys who are corrupt in the following article—it is undeniable that they had management capability. If the structure were such that instead of defense funding, it was coastal management of large projects, they would have had their wealth and more.

Defense and war are a zero-sum game; one must lose for one to win. That is why a wellness model brings more wealth to those people who understand it, operate it, and live under it. If this is the best model for each of us individually and collectively, then why isn’t it the best model by metric, taught as that? Globally. Now. A place aliens may want to make their presence known because we embody more of their ethics.

I might add common defense protocols to UAP operations would strengthen our ability to respond to threats by incorporating the standards needed to respond directly into 195 constitutions.

That is what I am asking you to do, create and give the world a document that benefits everyone everywhere. You will need the whole \$50 million to be distributed to schools and organizations throughout the consortium network.

I really hope you help.

Bob Good

Proposal #4

Humanity's Current Situation

Consciousness, Commerce, and the Law

Funding a Cohesive Program of Consciousness Study and Its Application to Societal Law

As unbelievable as the information in this chapter is to the casual reader, the following presentation is the centerline of truth. The question to be asked of any reader of this chapter is what would you have done if you had been in charge, and given that this is the current situation, what would you do now?

There is so much misinformation and disinformation when dealing with information these days that we need to use the following method...

The Four Questions:

What do we know?

How do we know what we know?

What does it mean?

How is it applied?

This chapter is the core of our situation. Early in my academic career, I was told that if you want to know what the truth is, you must read the extremist views on either side of an issue. That will help you find the center line. So here, in the simplest of terms, we are going to explain your personal relationship to the problems that we as a race on Earth are faced with. We are visited by multiple species of extraterrestrials, transdimensionals, and sometimes they are both.

In order for humanity as a species to understand our position in this universe, technology transfer is not enough; there has to be a common consciousness understanding that removes the blocks that disunite us because that common consciousness has an effect in a transdimensional world. We occupy a transdimensional world, and most of us do not know it. We as species are going to become transactional in that environment, and in consciousness and the science of reincarnation, we find the hinge on which our future turns.

For beginners, the science of reincarnation has mathematically proven that you will not die and that your personal mind has an address in space and time. You are not a body that has a soul, you are a soul here to have a human experience, and you shed your body through your life and after death. All the manifestations of psychics, remote viewers, and clairvoyants are transdimensional experiences, as well as the ones where aliens communicate telepathically with each other and with you. You are transdimensional, and most of us do not yet know that. So, rebirth, in a sense, is being reborn in a transdimensional environment or being uploaded and downloaded to your particular cloud of choice (insert your religious belief here).

In explaining the science of reincarnation to the layman is that you, my reader, are just data. You already know you can upload and download information to a new computer. We are going to meet a race of aliens, the Grays, that are using this and humanity to create a hybrid race to move their “essence” to, but, really, it is just a transfer of information that is living that differentiates uploads and downloads. This goes hand in hand with nonlocal consciousness and intelligence gathering.

You all know that there are asks of scientists, billionaires, and educational institutions who work together in this set of proposals. We are now at the door of the CIA and our intelligence services, and there are asks of them and the alien managers who work through them at the end of this proposal. There is one other group. We are going to call them the Intelligence Energy Consortium. This is their question. Everyone who is given an ask is given a quid pro quo. So, it shall be with this group. Imagine three worlds you control the energy of. Can you do that without passing this point?

I want to be clear about my position regarding the following choices made by our government on our behalf in the name of the United States National Security. As you read it, ask what you would do or what you would have done if you were involved as the events unfolded. We only need to look at the response to the Orson Wells radio broadcast only decades before that created mass hysteria.

Our relationship with aliens changed in 1946 with our entry into the atomic age.

I am not going to try to make the case that aliens are here; the proof is now incontrovertible. I am going to try to deal with what should be done about it, how it is being handled, and the consequences of what is occurring.

ALIENS—the turning point. The event at Roswell is not the beginning of alien interference and management of the human race but marks a turning. At the time of the Roswell crash, Roswell was the only nuclear-armed station in the world.

The alien crash resulted in the acquisition of materials that could be studied and created a sea change in the whole national security organization within weeks.

Date of Roswell Crash: July 8, 1947, Roswell Army Air Field issued a press release stating that they had recovered a “flying disc.” The army quickly retracted the statement and said instead that the crashed object was a conventional weather balloon.^[1]

In fact, the United States had positive proof, including ships, alien bodies, and one alien still alive.

Two months later, the Central Intelligence Agency (CIA) was formed. Date of the Creation of the CIA: **September 18, 1947**, when Harry S. Truman signed the National Security Act of 1947.

Date of the USAF Split from the US Army before It was the Army Air Corps: on **September 26, 1947**, by order of the Secretary of Defense, personnel of the Army Air Forces (AAF) were transferred from the Department of the Army (formerly the War Department) to the Department of the Air Force and established as the United States Air Force (USAF).

Date of Creation of Unacknowledged Special Access Projects, 1947 (?).

Nellis AFB is where this newly acquired alien material ended up. Nellis AFB is located at 4700 N Las Vegas Blvd, Nellis AFB, Nevada and can easily be found on MapQuest. Nelis AFB is about 5000 square miles in size. It is located more than 120 miles northwest of Las Vegas.

So, beginning in 1947, Nellis AFB became the epicenter of alien technology research in the United States. The Area 51 addition was even more remote and secure, and it was here that the United States began to try to retro engineer the vehicles they had recovered.

The US government's official name for Area 51 is the Nevada Test and Training Range, which is a unit of the [Nellis Air Force Base](#). Today it is used as an open training range for the US Air Force.

According to the CIA, the name Area 51 comes from its map designation. It was also previously referred to as "Paradise Ranch" in order to make the facility sound more attractive to those that would be working there. "Paradise Ranch" was then shortened to "The Ranch."

It is restricted to the public and has armed guards patrolling the perimeter. It is also impossible to enter the airspace above without permission from air traffic control.

<https://www.cnn.com/2019/07/31/us/area-51-fast-facts/index.html>

How do we know what we know?

I am now going to use Dr. Michael Salla's book regarding the timeline of events that unfolded as a scaffold to explain what I am asking our billionaires' \$50 million to do. It is well-sourced, and I do not need to recreate what Dr. Salla has explained and documented. In explaining the events as they unfolded, we can see governmental policy taking shape.

The restrictions the intelligence community put on the information put restrictions on their ability to respond to that information. While governmental bifurcation may have been appropriate at the time as events unfolded over the next seventy-five years, it restricted the government's ability to bring resources to bear on the problem. What these TIFACS proposals are about is bringing an upgrade to the present situation by bringing more resources to the effort.

My job here is not to reiterate what Salla lays out but to respond to the information scientifically in innovative, beneficial, and intelligent ways, and in order to do that, complexity must be taken out of the equation because it obfuscates a larger, more important truth. What do we do about the situation we are in?

This is fair use of copyright as Dr. Salla is spot on with his observations so I will use Dr. Salla's well-sourced timeline so we may deconstruct both policy and reaction on all sides of the political and intergalactic landscape. I do this as expediency so more important issues can be addressed, and this paper be delivered on time. I want to point out the difference in policies between extraterrestrials vs. the transdimensionals as part of creating an exopolitical platform for humanity.

I am only going to cover a few alien groups. There are too many to cover a complete anthology here. Additionally, it is being proposed as part of the Consciousness Center's mandate with TIFACS to create a school to study all the alien groups and their relationship to humans and make policy recommendations regarding such. Remember, each of these alien groups can be reached non-locally by the remote viewing group that it should work in conjunction with. The Naval policy of Look Before You Leap can be implemented here as well.

It would be counterproductive to this proposal to attempt to recreate the arguments that aliens are here but to take the centerline of information and give examples of where it has been extracted from.

Eyewitnesses

Aside from Buzz Aldrin, Edgar Mitchell, millions of witnesses, whistleblowers, and abductees, you have a parade of Presidents alluding to aliens being here as well. So, lots of sources.

As we learn about the galactic neighborhood, stories emerge.

Remote Viewing

“The information on ETs gathered by remote viewers is often startling in its implications. For instance, Brown describes remnants of a Martian civilization and its relationship with Earth: ‘There are Martians on Earth, but one must think clearly about the implications of this before ringing the alarm bell. These Martians are desperate. Apparently, they have very crude living quarters on Mars. They cannot live on the surface. Their children have no future in their home world. Their home is destroyed; it is a planet of dust.’ Perhaps more significantly, remote viewers described a federation of worlds responsible for controlling evolving planets such as Earth. In various sessions, remote viewers described the nature of the headquarters of this Federation and the ways these ET races influenced behavior.”ⁱ

Abduction

“But what I have found to be so extraordinary from the beginning of my study has been the readily identifiable patterns that emerge when the case narratives are examined carefully...The growing number of abduction cases has led to this category rising in importance as a credible source of evidence for an ET presence. Estimates of the number of abductions in the US go as high as several million, signifying a huge database of potential information on the ET presence. This database is continuously being refined as researchers develop the analytical...”ⁱⁱ

The point of the last quote is to reference what Raymond Moody says about Near Death Experiencers. The readily identifiable themes lead to an analytic of this being our reality. The math proof that this is occurring is now a certainty. This same math proof proves the transcendent nature of consciousness we all, aliens, and us, are involved in. So, we are not just dealing with extraterrestrials; in order to cover the huge distances of space, they need a transdimensional technology. The frame of reference my reader must use to grasp the landscape is that their view of life after death just became their reality, but so did everyone else’s.

“Some former officials and/or employees involved in clandestine government military projects report to have seen live ETs at various military bases. Michael Wolf, a former member of a National Security Council committee that oversaw the ET presence, claimed that he ‘met with extraterrestrial individuals every day in my work, and shared living quarters with them.’ The reports of joint ET-human bases give credence to reports that a treaty was signed as early as 1954, during the Eisenhower administration, granting rights to ETs to establish joint bases for technological sharing on US soil and placing strict limits on the biological experimentation the Grays were conducting with US citizens. The existence of such a treaty between the Eisenhower administration and an ET race has been disclosed by a number of government/military whistleblowers.”ⁱⁱⁱ

“William Cooper, part of a Naval Intelligence briefing team for the Commander of the US Pacific Fleet, narrates the events surrounding this Treaty from classified documents he claims to have read as part of his official duties: In 1954 the race of large nosed Gray Aliens which had been orbiting the Earth landed at Holloman Air Force Base. A basic agreement was reached. This race identified themselves as originating from a planet around a red star in the Constellation of Orion which we called Betelgeuse. They stated that their planet was dying and that at some unknown future time they would no longer be able to survive there. This led to a second landing at Edwards Air Force Base. The historical event had been planned in advance and details of the treaty had been agreed upon. Eisenhower arranged to be in Palm Springs on vacation. On the appointed day the President was spirited away to the base and the excuse was given to the press that he was visiting a dentist. President Eisenhower met with the aliens and a formal treaty between the Alien Nation and the United States of America was signed.”(53)^{iv}

“Alluding to a treaty signed by the Eisenhower administration, Col. Phillip Corso, a highly decorated officer who served in Eisenhower’s National Security Council, wrote: ‘We had negotiated a kind of surrender with them as long as we could not fight them. They dictated the terms because they knew what we most feared was disclosure.’ Another whistleblower to elaborate on this treaty was Phil Schneider, a civil engineer who had worked on the construction of secret underground facilities, and who was found dead seven months after giving a lecture in May 1995 with the following information: Back in 1954, under the Eisenhower administration, the federal government decided to circumvent the Constitution of the United States and form a treaty with alien entities. It was called the 1954 Greeda Treaty, which basically made the agreement that the aliens involved could take a few cows and test their implanting techniques on a few human beings, but that they had to give details about the people involved. Slowly, the aliens altered the bargain until they decided they wouldn’t abide by it at all.”...

“Former officials involved in clandestine projects run by different government agencies, claim that the Grays communicate through telepathic thought exchange, and use thought to activate the advanced technology and navigation instruments of their spacecraft.” (56)...

“In reports on the content of the telepathic communication with the Grays, abductees/contactees have reported that the Grays’ survival as a species is threatened due to genetic degradation as a result of the repeated use of cloning for reproductive purposes. The Grays say they need to create a hybrid race that integrates the human and Gray genes in order for the continuation of their species. It is claimed that with the creation of this hybrid race, the Grays will somehow be able to transfer their “essence” or “consciousness as individuals into the hybrid, thereby perpetuating the continuation of their race.” (58)^v

Read This as the Science of Reincarnation As Used by Other Species

There will be readers who pass this point who do not believe in the science of reincarnation, but this is not about belief. This is a threat here on Earth that, without anyone’s help, humans may annihilate themselves. But to the point, do not let your prior beliefs limit what you see. In a dimensional manifold, the science of reincarnation is very real, both in an individual sense and a collective sense. The organization we remote view that helps developing worlds like ours sees Earth as one organism. Their goal seems to be to have Earth be an intelligent one.

There are several points to make regarding alien use of the science of reincarnation. Consciousness science is not just about human consciousness or alien technology but about retro-engineering alien consciousness and developing our own technology for consciousness uploads and downloads.

On the science of reincarnation, scientists here must embrace the entire concept. However, the inhibitions from an entrenched worldview and power structures are immense. This science is directly tied to LGBTQ policy and religious nationalism.

Once you acknowledge the alien presence and adjust to how the new landscape shapes up, we find these Grays do not pose an overtly hostile threat. Even though we have tried to attack them, there have been few, if any, hostile actions taken against us. The United States has tried to attack alien ships in our airspace deliberately. The aliens have not responded; they simply avoid us. They have better technology and presumably better weapons, and despite our attempts to attack them, they have not attacked us. Additionally, while abduction is frightening, the people taken are not harmed and are returned. The estimates, as stated, run in the millions.

“The idea that telepathy is the standard communication means of ETs gives plausibility to the claims of numerous civilian sources that they have been contacted by ETs and conducted telepathic communication with them. This is especially important information given by “channelers” who claim to be in communication with different ET races. In sum, the “intruder perspective” describes the intentions, abduction activities, genetic experiments, violations of the United States and allied airspace, and advanced technology of ETs as intrusive. Moral categories used to describe the Gray intruders are unclear.”^{vi}

In fact, Ingo Swann talks about a telepathic language that humans do not yet speak.

We access this field when we remote view, this field of shared mind, and here we find the Pleiadians:

“The Pleiadians say Family of Light [humans committed to transformational change] are systems busters [emphasis added] who travel through time to systems in need of change, helping to facilitate the collapse of these systems. 43 Marciniak and most of these “channels” support the idea that an ET presence has existed on the planet for millennia, and that there exists an officially sanctioned government conspiracy that is global in its reach to keep this presence secret from the general public. The testimony of channels in a court of law would obviously be controversial and not likely to be conclusive in any way. Nevertheless, the overwhelming evidence suggesting that ET races do communicate with humans through telepathic exchanges, indicates the importance of not excluding this body of evidence.”^{vii}

We also find the Anunnaki.

When Courtney Brown remote views the Anunnaki, he describes the Anunnaki remnants in space around us as often being in conflict with the ET intruders, the Grays. The Anunnaki are sometimes referred to as Reptilian.

“They argue that clandestine government agencies are aware of the Anunnaki remnants on Earth and are divided over how to respond to the anticipated return of the Anunnaki elites in the immediate future that may attempt to reestablish overt control over the planet. Brown, Picknett, and Prince claim that clandestine government programs are using “exotic” technologies such as psychotronic weapons activated by thought, enhanced psychic abilities, “star gates,” and even time travel to militarily prepare for the return of the Anunnaki who possess a technology supposed to be superior to anything reverse-engineered from downed Gray spacecraft.” (74)...

“A number of individuals who claim to have participated in clandestine military programs with ET races have also reported interacting with or witnessing a large reptilian species that presumably is associated with the historic Anunnaki presence on the planet. Andy Pero, who claims to have been recruited as a super soldier by a clandestine government organization, gave testimony of such an encounter: on one occasion I was introduced to a reptilian being while in an underground base sometime in 1989-90. At first I saw a seven-foot tall, human, Aryan-looking man. He walks towards me and I noticed that his image phases out as if something interfered with an energy field. He does something to a device on his belt and tells me, “OK, I’ll show you.” He then pushes some button and then I see his image change into a seven-foot-tall lizard like creature who looked like he weighed over four hundred pounds.” (75) ...

According to other participants, including Michael Relfe, Al Bielak, and Preston Nichols, reptilian beings are involved with time/interdimensional travel technology, mind control, psychotronics, and other exotic weapons.”^{viii}

I want to pause and reference Robert Byrd’s trip to the Antarctic. In his papers, he described meeting a race of more advanced beings who lived at the South Pole, and when his plane was taken into their space, and the weather changed, he reported seeing mastodons. He was transdimensionally taken across a border to a south pole that was warm and temperate. What is being described here by Salla is cross confirmed by related stories, building an entire map.

“Other sources report that during the early years of the Eisenhower administration, a group of ETs secretly met with United States government officials appointed to deal with the ET question and offered to assist with a number of environmental, technological, political and socioeconomic problems with the sole condition that the United States dismantle its nuclear arsenal.” (90) ...

“When the government officials declined, this group of ETs subsequently withdrew and played no role in the government’s clandestine program to reverse engineer ET technology for advanced weaponry. It is claimed that these “helper ETs” would subsequently concentrate their efforts on the consciousness raising of the general public—warning of the hazards of nuclear and “exotic” weapon systems reverse engineered from ET technology and limiting the environmental impact of clandestine projects.” (91) ...

“Then it is clear that the study of exopolitics will be compounded by officially sponsored acts of disinformation, official denial, and even intimidation by clandestine government organizations.”^{ix}

Now what needs to be done here in an exopolitical sense is to make policy recommendations. Tough to do in a world of secrecy. Not funding this proposal is to limit resources very badly needed by both our intelligence community and not just the US Government but all world governments. The intelligence services need our help (By that, I mean billionaires and scientists) but really do not know how to ask.

This chapter lays out the conceptual foundations for developing suitable policy responses to the ET presence that support the need for exopolitics as a field of study.

Now this goes hand in hand with the study of consciousness science.

Governmental Bifurcation

Proof of aliens was the number one secret the United States had more important than its nuclear arsenal.

To handle this, special access programs were set up with firewalls between the politicians, the military, and the United States government itself. Barry Goldwater once asked Curtis LeMay if he could see what the United States government had. Lemay responded, "You can't go there; I can't go there and don't ever ask me about this again."

In 1961 Eisenhower, when he left office, had lost control of this separate and secret organization. What he called the military-industrial complex should be renamed the Military-Industrial-Intelligence Complex.

Some questions: did the aliens who wanted us to give up nuclear weapons have nuclear weapons? Are nuclear weapons a threat to dimensional time-space? Their dimensional time-space? Ours?

What does that mean to you, the taxpayer? Deep black projects run over \$200 billion per year, and the Department of Defense (DOD) does not account for 25 percent of what it spends. They can, but they just will not. When the DOD says they cannot account for it, it means they will not account for it.

What are we getting for our money?

I do not want to indict our intelligence community; in many instances, they give up their lives for ours, but they are overloaded, so how do we proceed?

These are brave men and women working to protect us all. What would you have done? What would you do now? But how do you bring them back in? How do you support them? Seriously. You see, they now have the technology to change the world. The power source of the alien spacecraft and our retro engineering of it.

But they are *waaaay* overmatched.

The Congressional Research Service at the Library of Congress Science and Technology division, which review all material, both classified and nonclassified estimates, estimates there are between two to six other highly developed civilizations just in the Milky Way.

So, if we use the number as four more developed, we can use four times that number, assuming a 25 percent success rate. Then there are 16 as developed as us, meaning that there are twenty civilizations either more developed or as developed as us in our galaxy.

So, twenty planets at our level in this model, accessible planets in this galaxy times 125 billion galaxies as estimated by the Hubble Deep Field telescope is 2.5 trillion planets. You have the technology to reach them all and none of the resources in terms of human capital, and with a reductionist model operating here on Earth, you are going to get hurt out there. All one needs to do is look at the condition of the Russian oligarchs. And this is a limited view in three-dimensional space.

What is the change in groupthink to create acceptance of a fourth-dimensional model and keep control of the process and the transition? That is what these proposals are about.

The science of reincarnation is the key to opening that lock. It leaves tradition and religion without teeth. It respects the past but looks to the future and, in doing so, puts down arms.

The change will occur in one generation. Getting rid of nuclear weapons is a peripheral political benefit because this requires a global constitution.

If getting rid of nuclear weapons and getting rid of the pariah of religion is my hall pass to the universe, then the ones who profit from wars have just found a better, more profitable larger game.

We are not just dealing with aliens; we are dealing with the common mind.

This explanation of consciousness needs to evolve because if you use one remote viewer, ten remote viewers are better, and global consciousness is better still regarding understanding extraterrestrial intelligence and extradimensional intelligence and its exploration.

So, who should invest in this?

I want to step outside of the \$450 million needs outlined by Dr. Radin and ask for the United States government to ask Lockheed Martin, Boeing, and McDonald Douglas to contribute here. The alien ships of the Grays are piloted by thought, and while human thought may be successful in understanding the dynamics to translate human thought into an action by an intelligent machine, there needs to be an overriding structure. The connection is not just to the spacecraft but to every system in it. This goes to navigation in a dimensional manifold. This is literally connecting the consciousness of the pilots to the craft they will fly.

In the coming proposal on theory development, it is not just that we already have alien reproduction vehicles, (ARV's) but the question is where we would go in them and what we would do in them.

TIFACS is at the center of raising money and creating a plan to harness human energy to create a course of study that brings resources to what our government is doing. Our government is simply overmatched and does not quite know how to proceed. Aliens are running acclimation programs; apparently, we are being helped by some alien species, but we, as a species cannot leave money on the table in a game like this. The proposals we are advancing helps everyone.

While the numbers are getting larger in the next proposal, we will explain how to create twenty chairs of consciousness that will contribute to theory development and then applied research.

This transcendent logic-driven operation has political ramifications in LGBTQ, religious, and racial legislation. This is a political position based on science, knowledge, and truth.

The Noetic Institute and the University of Arizona are prime recipients of consciousness grants. After building the network in consciousness in the twenty chairs, you have a structure for greater impact in theory development and applied research.

Thanks to Mike Salla's well-researched timeline, we can simply explain the dynamic gestalt of our situation:

1. There are aliens with many different agendas.
2. There are transdimensionals.
3. Us, human consciousness, and religions are all the same. Just dress and custom are different to make people be more submissive and controllable. Continuity of consciousness is a fact for us all.
4. Us, human consciousness, all colors are the same. Bill Nye, you enter this world in a band around the globe that dictates skin color. Near the equator is darker, yet near the poles lighter. Differentiating this is another

way to keep us apart. But common consciousness seems to be what the federation at the center of remote viewing we do is interested in. Common health can be infected to do harm to the body, and infectious viral ideas need to be laid to rest by courageous scientists before they infect the mind. Ideas antithetical to logic must be addressed even when and especially when it contravenes religious belief.

5. Is the process protected? In short, is the development of civilization protected? Are we being protected from the Anunnaki? If so, by whom? Courtney Brown refers to the Federation. He has asked them for help to remote view the reptilians who tried to block him. Shouldn't this have some priority for humans?

6. Our government is outmatched. Government, just who do you think is getting into those ships you have? This is going to consume more resources, and to quote an old movie, "You're going to need a bigger boat."

How is what we know to be applied?

For Christin Gillibrand, we ask that you request the release of zero-point energy. In this ask that you will have of the intelligence agencies, ask for an encrypted control to accessible power to ensure safety. It is already on the units in the alien craft. The intelligence agencies will control the amount of accessible power per unit. Encrypted controls to accessible power ensure safety and can be achieved. Christin, this will disrupt the power grid economies but transform the world by eliminating carbon emissions.

For the CIA, we ask:

1. Open your files to begin to give the timeline of alien contact. This should begin to be taught in universities. Culling the United States military for individuals with nonlocal talent should be expanded to a global program managed through and by the consortium of schools outlined in this proposal, thereby developing scope and reaching beyond your present capabilities.

2. Develop and distribute the nonlocal power sources used to power alien spacecraft. Given the fact that any power source is throttleable, it can be made safely and transform the Earth by no longer needing local resources for power. Additionally, it powers education and reduces the need to control resources that are outside current national boundaries.

For the alien managers and visitors to this planet that are extraterrestrial:

First, a proposal like this generated organically is evidence of your acclimation programs eliciting a response. This is an acknowledgment that we have intersections that are clearer to you than to us. It is also clear that you do not want nuclear weapons in space. We are coming to the moon, and to the South Pole, and we ask that we interact in the best possible way. It's not just the military who will run this; it will be commercial, and Earth will need to plug into the universal structure in an orderly way.

The ask, then, is that you participate with the structure outlined in these proposals with the spaceport in Arizona connected to a consortium of schools studying consciousness.

Implicit in this request is the understanding of a higher level of space-time and the removal of any weapons that may harm ourselves and others within the terms of the larger structure of planets/federations. I do not have the right words here, but I think you get the idea.

To the alien managers and visitors to this planet who are transdimensional:

We ask you to normalize all religions using the science of reincarnation and allow us to see our past lives enough to remove the blocks that interfere with our ability to have a common consciousness that protects the whole with the individual pieces working in unison. This ability in humans in the nascent form to resonate dimensionally should be publicly acknowledged and studied.

Now there is an implicit offering of a quid pro quo in these requests because, by complying, you sanction the mobilization of trillions of dollars in resources as represented by the consortium of billionaires being recruited and organized to improve the present conditions on Earth.

First, by normalizing relations in a positive way, we take the threat of nuclear war or accident off the table. Replacing it with a nonlocal power source device or zero-point energy device that powers your spacecraft, the need for nuclear weapons diminishes to a vanishing point.

Second, resources can be diverted to the reclamation of the planet. Global warming can be reversed, and all races who use the Earth for resources can continue or improve their condition and access.

Third, commercialization of the needs of alien races creates opportunity for all.

Fourth, the technology transfer to humanity can only be accomplished with a corresponding understanding of consciousness. The science of reincarnation, as explained in these proposals, is used by the Grays in creating hybrid beings to transfer their “essence” to. It is a simple upload and download of information, and when that information has self-reference, in short, is sentient; we call that transfer to a new container reincarnation. That needs to be explained globally to advance the acclimation projects that are ongoing. This is simply a suggestion to improve the current conditions.

The gestalt of this entire effort is that by working together, we improve the conditions and result for everyone.

So since so many of our interests are intertwined, how should we collectively proceed for the best result for the entire group?

To all concerned, nuclear war on Earth benefits no one, so everyone should be on board to help Earth get over this dangerous hump. Earth is in development, and by all we can see, helping us get out of the periods of war would protect the resource pool for all of us. If our information is right, the Grays suffered such a calamity.

So how are we going to proceed? This question is asked not just to my human readers but my alien readers as well. If you are working to bring humanity along in development there are moments, that show greater maturity and understanding. This is one of them. Presenting a method to communicate, such as the science of reincarnation, to everyone, you emphasize the importance of global harmony as well as harmonizing humanity with the universe at the same time. You are interacting with humanity now, and the situation might be optimal for you, but joint cooperation would be best. This is a step toward that, a proposal coming from Earth, and just the act of creating it is the creation of a new reality.

I ask each and every one of you: had you been Eisenhower, what would you have done? My own opinion is that they did the best they could in their moment, and then their moment became the structure to overcome. We cannot negotiate because we do not have the power or sometimes even the knowledge to defend ourselves. Still by all indications there is a structure at work that does, and remote viewing found it.

Now equate this to the Proposal #1 request for funding for the Noetic Institute that has its fingers in identifying the gene for psychic ability. The \$450 million now is an imperative and the government is not capable of the type of response being proposed here. If you are a billionaire, how far into your next life can your money and the science of reincarnation take you? There is an answer, and that is common intent, meaning not just your intent but the intent of others. This is explained in many religions, but they are just stories. This is about the manipulation of your own personal reality. Said plainly, reincarnation is more than just a mathematical certainty, its funding the science to build the technology. Then let me ask you, Mr. Billionaire, where are you going?

In Proposal #1, we explained the need to fund the study of human consciousness and integrate the physicalist camp with the nonphysicalist camp and produce a standard model of human consciousness, including aspects of collective human consciousness.

In Proposal #2, we explained the need to fund that intersection between alien and human consciousness and its study.

In Proposal #3, we explained the need for a global cohesive response to the emerging conditions for all parties, including aliens present in our reality. This includes extraterrestrials and transdimensionals.

Here in Proposal #4, where we are now, this plan is a benefit to all and a better use of resources.

I am not giving away any national secrets, but you are at a singular point. Billionaires, you are going to have to do what governments should have. But the investment opportunity is immense; it rebuilds Earth, and it opens the universe. It changes the planet, and it changes us. We cannot stop it, but we can make it better, easier, and gentler.

It is safer for alien extraterrestrials and safer for alien transdimensionals.

The simple explanation: this proposal is about monetizing and democratizing the technology obtained from the retro engineering of crashed alien spacecraft. To that end, this is an appeal to one politician in this entire proposal series, Christin Gillibrand. The appeal to her is the appeal to all politicians to request the same thing of their governments.

The aliens know that some of us humans know they are here. But the acceptance of this fact by the general public is being cultivated through acclimation programs directed by the aliens themselves. This request, then, is to direct a response the aliens would be interested in and to begin a commercialization process through the structure and process outlined in this series of proposals.

The point of attack to begin such a program is the only politician invited to this endeavor. NY Senator Christin Gillibrand is writing the request through the DOD budget for 2023 to have information released about what our intelligence services know. It is the opinion of TIFACS that Senator Gillibrand, in subsequent budget requests, should target technology transfer to the general public through a consortium of billionaires and organizations to improve world health and wellness through the consciousness center. The centers mandate to scientifically propose the most efficient and beneficial way to do this.

Without the cognitive idea to shape the request in this way, we will need to wait until some other impetus drives this. This needs to be done for the sake of humanity and our alien neighbors, and it needs to be done

now. So, the request is not just to the intelligence community; it is to the aliens themselves to watch us build the spaceport and then arrive publicly.

Christin, this December 2022, you are making disclosure requests in the DOD Budget. What you are asking for can be improved by asking for the declassification of technology that will transform the world. On the spacecraft obtained by our government is what looks to be a transparent plastic sheet roughly 18" by 24" by ¼". We now know this is the power plant of these spacecraft, and it accesses zero-point energy. A household model would power any building worldwide for virtually no cost. In your subsequent request, this is what you should ask for. Not just the zero-point power pack but any technology that can improve the world.

To the hidden behemoths who control society, here is the request for you: allow zero-point energy to be released to the general public. You can control any accessible amount of power through an encrypted design. Earth can die like so many other planets through misuse, or Earth can change for the better and humans with it. In one movement you can wipe out the pollution of fossil fuels, end the carbon era, and create a new global industry of installing and maintaining the equipment. There is the issue of humans out in the galaxy that may be offensive to other races, but to let Earth be destroyed when so many come here to use its resources and a better way to manage Earth is the commercialization of extraterrestrial needs. So, while the behemoths may fear this development, it increases their wealth, power, and reach. Only when the behemoths acquiesce to this development will humanity allow it, and this is a written request asking you to make this so. Universal free power.

There is one corollary to this request that should be made clear. No request in these proposals is made without a corresponding benefit to the requestee. That benefit is managing your own consciousness after death and into the next life. That is right—not just reincarnation but managed reincarnation with the universe accessible anywhere. We started with a math proof; that reincarnation in humans was real. We then found out that the Grays use a system to move their consciousness to new bodies. What we will learn in theory development is how this will lay the foundation for this being a real event. To achieve this, humanity has to move forward in a non-threatening way to the alien consciousnesses that surround us both in our 3D and dimensional manifold environments.

Quantum computing, as explained in the coming proposal on theory development, will change how one looks at reincarnation. Your money into these projects will mean that by 2040, billionaires will become immortal and that by 2050, millionaires will be able to afford the same option. We need the investment in consciousness studies now because there is no point in doing on a dead planet. Please take this seriously; we need your help.

The commercial development of ZPE (zero-point energy) should be handed over to the consortium of schools, and billionaires articulated in the education section, so its global benefit is global.

This should be something our consortium of billionaires should be actively pursuing. To that end, TIFACS is proposing an alliance between the intelligence community and our consortiums to manage that technology transfer to the world.

Within this structure we can both be harmed or helped, but we can also harm or help ourselves. This suggestion is just that, an attempt to help ourselves face the larger universe of our neighbors.

That means we should commercialize the aliens' needs. Clearly, we are being used as a genetic farm by one species and threatened by another, yet protected by an over-galactic core agency protecting emerging species. We can help or hurt this web through our own actions.

1. Water for mining the moon. In *Penetration*, Ingo talks about his experience watching an alien ship suck water from an Arctic Lake. Aliens come here and use our natural resources. Can we add value to their needs by providing services in exchange for technology? Can this be done commercially rather than through the Government?
2. Genetic infusion into the Grays. There must be better ways than abducting people at night. Frankly, a more efficient way must be found for everyone, or is there something happening we do not agree to?
3. The transdimensional entry at the South Pole as expressed in the Byrd documents and other instances.
4. Our neighbors on the moon who do not want nukes in space. How is that negotiated? We do not own the moon. They were there first.
5. The dead Martian world inhabited by the remnants of Martian society as remote-viewed by the CIA. Also, Buss Aldrin's acknowledgment of a monolith on the Martian moon.
6. We have a very real need to develop a political science platform at all our universities that includes exopolitics to deal with this, its intricacies, and the introduction of AI as a means for conflict resolution.

In conclusion, from the point of view of the military and special ops training, not developing the human capital in the second and third world in health welfare and education is leaving money on the table in the competitive game humanity has entered in an unacknowledged intergalactic reality. Not to see your weakness by being fooled, as described in Proposal #2 is to be willingly complicit in your loss.

Redistribution of wealth in this context hurts no one and helps everyone while at the same time mining human resources that are underdeveloped. There is no choice in this, just the timeline.

I want \$50 million to organize an intelligent response, one factor of which is how, how much, and how fast more resources can be brought to bear on the threats and opportunities this set of facts presents us.

Now we are asking Christin Gillibrand to ask for zero-point energy from the CIA/Intelligence network. But that is not where approval comes from, nor our governments. It comes from a shadowy band of power brokers who make trillions by controlling the power used on Earth. They are the ones really being asked, even if Christin does not understand the game she is naively running into.

What becomes of you personally in this dynamic? Reincarnation. The Grays have lots of technology, and part of that is transferring their "essence" into a new lab-grown body. This process involves the same transfer of essence that every human believes in so long as they believe in birth, let alone reincarnation. So, what is at stake here is your own personal future.

With their deaths, your hostility has led you to a permanently affixed antagonist.

You have that access to zero-point energy. Releasing that sends humans across the universe and gives you the management of your own cognitive immortality. You are afraid of that. That deeper consciousness. But here, in 3D space and time, you are momentarily insulated.

Gently and slowly release ZPE to Earth. Acknowledge our reality in a universe populated with new neighbors. What you do now will echo in eternity. A word from the guy handing you this message on how to implement this: do not shoot the messenger. He is useful to you in ways of structure and direction but will not participate in the organization. Your approval releases all parties to participate and consequently protects both yourself and humanity without you giving up control because the gateways to the stars and future investment are still and will always be controlled by the power brokers. A weaker humanity weakens your personal defenses in a dangerous universe and takes mankind's fate out of its own hands. The danger for you is not in 3D but in 4D. This ultimately is something you cannot stop but can only manage. The benefit for you by participating is to both add to your power and safety by developing resources you do not yet have and will. The game you sit at is an iteration of every game on every planet you now have access to. That is why this is a good and fair request to you, and we hope you see its merit.

TIFACS.org

Proposal #5

Education

Funding a Cohesive Program of Consciousness Study and its Application to Societal Laws

Education progress in parapsychology has been slow and is intentionally excluded from the academic world (with a few rare exceptions, as noted below) because there are concerted efforts by small groups of activists—most of whom are not scientists—determined to marginalize the field. For decades, such efforts were primarily associated in the United States with an organization called the Committee for the Scientific Investigation of Claims of the Paranormal, or CSICOP. Today (2019), they have adopted a shorter name, CSI, for Committee for Skeptical Inquiry. The irony about CSICOP/CSI, which has strongly influenced scientific and public opinion about parapsychology, is that for many years they trumpeted the term “scientific investigation” in their organization’s name, but they hardly ever investigated anything. One of the very few times they did launch an investigation, they successfully confirmed a claim about astrology. The committee was so shocked by that outcome that they intentionally suppressed their findings. The only reason we know this is because one of the members of their executive committee blew the whistle on them. As the influence of CSI has somewhat declined with the rise of the internet, we find the same mindset still active, this time in the form of self-styled Guerrilla Skeptics on Wikipedia. They state their mission as the following: “To improve skeptical content on Wikipedia. We do this by improving the pages of our skeptic spokespeople, providing noteworthy citations, and removing the unsourced claims from paranormal and pseudoscientific pages. Why? Because evidence is cool.” The irony here is that these so-called skeptics are really not interested in evidence at all, because if they were, Wikipedia would provide articles on parapsychological topics that survey all sides of the topic. As it currently stands (2019), all those articles have been edited by guerrillas to be exclusively negative. Wikipedia proudly advertises that it can be edited by anyone, but in practice, that is not quite true. Wikipedia has an endless set of byzantine rules that editors have to follow; otherwise, proposed edits are not accepted. Taking advantage of this, the guerrillas have rewritten parapsychological-oriented articles as well as the personal biographies of scientists involved in parapsychology in such a way that a naïve reader going to Wikipedia for information will come away with a thoroughly negative opinion. Thus, a well-funded educational effort would do the following:

- (a) Commission high-quality online written and video information that presents a more accurate picture of the state of the science, including how parapsychology explores the “big questions.” One initiative to do this is already under way, but to make that site more popular would require a dedicated public relations effort.
- (b) Hire experienced Wikipedia editors to refine the existing biased articles to make them more accurate and balanced.

(c) Develop new or revise existing introduction to psychology college textbooks, most of which today simply regurgitate old prejudices about parapsychology that were heavily promoted by CISCOP.

(d) Commission more accurate portrayals of what parapsychology is, and what it has learned, in TV shows and movies aimed at popular audiences.

(e) Commission a series of academic and popular books by knowledgeable authors that describe the history, methods, and results of the various categories of study in parapsychology.

(f) Commission web-based or mobile-based experiments accessible to anyone.

(g) Establish endowed chairs of parapsychology within fully funded Centers for Consciousness Studies at major universities around the world, and provide funding for undergraduate and graduate scholarships, teaching, and research assistants. The last point is the most important because as long as this topic remains marginalized, there will always be a struggle to find students to keep the field alive and thriving.

We know, for example, from an endowed Chair of Parapsychology established in the mid-1980s at the University of Edinburgh, Scotland, that a single well-run graduate program at an established university can significantly revitalize the field. Three decades after that professorship was established, over seventy-five graduate students have gone on to gain doctorates associated with parapsychological topics. That one chair established the United Kingdom as world's current academic center for parapsychology. The chair at Edinburgh was not the first time an endowed professorship for parapsychology was established. There were similar endowments at Harvard, Clark, and Stanford Universities in the late 1800s and early 1900s. But after the initial holders of those positions retired, subsequent professors were hired who were either not interested in parapsychology or the funds that supported those chairs were usurped by the universities for other purposes. Thus, any new endowments that are established must be specified in such a way that the purpose of the chair cannot be altered and the individuals selected for those positions must be vetted as having appropriate interests. It is predictable that universities approached with the opportunity to gain endowed chairs of parapsychology will encounter vigorous opposition from existing faculty because nearly everything they think they know about parapsychology probably originated from highly distorted sources. Thus, the endowment initiative will require a companion educational and public relations effort to inform faculties and university administrations about what the topic actually entails. This initial educational effort might cost perhaps \$50 million, with most of those funds supporting the endowed professorships, student scholarships, and associated costs. On an ongoing basis, the costs would drop to perhaps \$10 million a year. Before the last and arguably most important proposed step is taken (the endowed chairs), it would be advisable to first launch a one- or two-year discovery project by a team of higher education experts. The mission would be to identify universities that are devoted to honoring the endowments and to ensure that the plan is both practical and achievable.

Dean Radin, *The Mathematics of the Science of Reincarnation*.

Dean lays out the bare bones of a structure, but my request to him never centered on aliens, exopolitics, and certainly not the political or social ramifications of consciousness research. And yet here we are. How do you teach what consciousness science is showing us without that new knowledge reflected in our education now? Once that happens, what happens to accepted societal norms?

How do you fund research that contravenes our accepted religious beliefs while not doing so blinds us to real threats?

So what follows is how to actuate Dean's plan, whom we will ask to do it, and whom we will ask to pay for it. In this instance, the proposal goes to Robert Bigelow, Makenzie Scott, Melinda Gates, Ron Barron, Elon Musk, and Mark Cuban.

How do we make that happen? What needs to be done in any model is to streamline the pipeline of information.

The overall ask here of Robert Bigelow is to help found a consortium of billionaires to match the consortium of scientists. Each of the invitees is given both asks and benefits commensurate with their involvement. Here we involve every billionaire in the same way, their area of interest and expertise either off-world or dimension. A look ahead: 2000 billionaires times \$100 million each equals \$200 billion. That would be a good investment in the consciousness project.

So, Mr. Bigelow, I am asking you to lead this process. I am asking you to be both a salesman and an administrator. To solicit funds for deposit and distribution as outlined in this series of proposals.

The simple explanation: As you read these proposals, one thing that should be coming clear. We are trying to create a consortium of like-minded billionaires to join a consortium of our best consciousness scientists to chart the best course for humanity given its current condition and position.

There are two general models of consciousness. They can be divided into physicalist and non-physicalist camps, one stating that consciousness is derived from our bioelectrical postulates and the other that consciousness is housed both in and out of the body.

These proposals have stated clearly that both extraterrestrial and extra-dimensional beings populate our planet and reality.

We believe in psychics. We believe in heaven, but when we see a transgendered person walk down the street, most of society cries foul. Yet that transgender person is making their decision based on nonlocal information. That transgender person is a walking embodiment of fourth-dimensional thought.

The issue is that what most religions believe is almost true. Only when you explain this science does belief turn to understanding and understanding to acceptance and kindness. That transition of understanding will change the future of the earth. The explanation begins with education.

So, in line with Radin's categories, we are asking for the money to found a network of chairs of consciousness. We are asking Robert Bigelow to begin the process with McKenzie Scott and Melinda Gates. Once the chairs are established, this team of three billionaires' splits, with Robert Bigelow moving over to the theory development proposal while Makenzie and Melinda remain to distribute the Standard Model of Consciousness globally on all media. This education is to explain the religious afterlife from a common conscious point of view.

To Robert Bigelow, we say:

Robert,

I want to congratulate you and support your efforts regarding the conclusion of your recent writing contest. I look forward to reading the winning entries. I spoke with Colm about what we are doing at TIFACS, and he said to send me a proposal. This is that proposal.

What is next for BICS? What this proposal is stating is that you are among the few people who have the resources, understanding, and will to advance consciousness research. This proposal, while asking you to contribute money to this effort, is really asking is your leadership and involvement by asking you to guide the money TIFACS raises into programs and policies that advance our understanding of consciousness and promote the benefits the world gets from that increased understanding.

I want to ask you a question, what is next? What are you going to do with the information and analysis you have collected?

Sit in the Theory Development chair of these proposals.

The following is the place to begin; just set that up and fund it, and it will grow.

A committee of four permanent and eight rotating members will evaluate funding proposals within consciousness science and distribute grants.

The four permanent members are the executive director of TIFACS, Noetic Institute lead scientist, the University of Arizona Center for Consciousness Studies, and the Bigelow Institute.

This committee will look to support research efforts in consciousness science by funding scientists with the funds derived from TIFACS fundraising efforts.

Robert Bigelow has a deep understanding of this landscape and knows how to manage this type of venture within consciousness science. Begin the plan to fund twenty chairs of parapsychology using your judges and the Center for Consciousness to select where the chairs should be placed and what funding they should get. I would ask that the first chair be placed at the University of Edinburgh and be called the Dumbledore Chair. If each chair is funded for \$5 million, this would need \$100 million.

To fulfill the structure to fund consciousness science by supervising the creation of the twenty chairs of parapsychology using the input and guidance from the judges of the contest BICS just ran but also with the input of the Center for Consciousness Studies at the University of Arizona and the TIFACS board.

Where should the initial twenty chairs of consciousness be placed? Here is an incomplete list because these should go first, and then the scientists themselves sort out the rest. From the point that the twenty chairs are identified, Robert Bigelow moves over to theory development, and Mackenzie and Melinda execute their part of this plan by bringing science to prejudice globally.

The chairs are UVA, Princeton, Stanford, University of Miami, and the University of Edinburgh (a personal ask, I would like this chair to be named after Dumbledore), the University of Arizona, and the University of Toronto (named after J. Norman Emerson). There are two other chairs, one at Annapolis and one at West Point. That is nine chairs and their locations. The other 11 should come from the board created to administer this process.

So, Robert, what am I really asking you for? I want you to raise \$100 million from two thousand billionaires and place that money on account at the University of Arizona's economics school. They will be the fiduciaries, and the disbursements will be made public. That money is to be disbursed according to the general plan laid out in the applications of the science of reincarnation and be administered by the parties named in the book. I know the first tranche is \$450 million. But once the total of this plan is spent, right now estimated at \$200 billion, humanity will be on other planets and this group of billionaires will be richer and more powerful.

This will get messy. You have recently said that dealing with transdimensionals is dangerous. No shit. But you know it, and very few people do.

So here is the deal with all the billionaires. Get the money, put it on account, have a consortium of billionaires' fund consciousness science and its derivatives as defined, and do it now. Let all the best scientists humanity has to offer lead it.

Now let me remote view a future with this as a strategy for you and the other billionaire participants, the extra-terrestrials, and the transdimensionals who are all part of this request.

The value of Earth is not just that it is in the Goldilocks Zone but its vast and vibrant gene pool of which we are a part. A war is being fought in subspace over us for control of us, and the warring parties' intent is to keep us unaware of this. My writing to you puts us both at risk, except that this proposal, in its entirety, offers a solution to all parties.

For the billionaire class, reincarnation becomes viable as led by the technology transfer from the Grays to humans, in exchange, say, for easier access to the genetics they need so they can stop abducting people in the middle of the night. For the reptilians, it would be access to and acceptance by a larger community. This would mean the locations of the Martians in New Mexico and the multi-species operation at Area 51 become more open informationally. This would also mean disclosing the alien locations here at the South Pole and on the moon. Humanity would access a level of understanding that would make it both interstellar and transdimensional at once. That can only be done through a change of consciousness.

For you and the other billionaires personally, you collectively would be the first, and you would and could design your next life on the planet of your choice. Or stay right here on earth. But the markets for our exports mean we need global action on climate change and protect every species now to keep and protect our genetic inventory. The unbelievable opportunity for the billionaire class offered within this proposal is truly unprecedented. It brings peace to the Grays and the reptilians as an offer of goodwill into the universe and our first organized attempt to contact the galactic federation. I want to add to every reader here that we have been prepared for this by the ongoing alien manipulation of Hollywood to acclimate us to the reality of space and time. This is a planned and executed alien acclimation project.

Billionaires need to understand that for a scientist or a group of scientists to propose the scale, danger, and consequence of what this proposal is advancing would be academic suicide. But once this is funded, those very scientists should lead it.

Organizationally this proposal contains the basics to begin. Once the real money arrives, it will decide the structure, how to distribute new technologies globally, and who makes money from that process. A greening of the Earth means a greening of humanity to maximize production from all levels of society. While this may be ideologically and politically poison to some, it is how the galactic federation views and values us as a remote emerging society on the edge of the galaxy we call the Milky Way. The bigger money is on their side of the view and what this proposal advances for the billionaires is in their own short-term and long-term

interest. But there is an urgency to do it now, and that lies in the fact that you have less control of your future life if you die before the protocols are put in place. Funny, but true nonetheless.

To McKensie Scott and Melinda Gates,

It starts with you as foundational members per the TIFACS founding proposal attached below to deposit \$1 million each with a check made out to TIFACS, The Institute for Advanced Consciousness Studies. It should be sent to Fox Rothchild LLC Esq. c/o their escrow account as described in proposal one. That will trigger in setting up TIFACS as a 501(c)(3). TIFACS is the author of the document you are holding. The remaining money you are being asked for can be directly given to the recipient institutions in the attached founding proposal or simply run the whole amount through TIFACS (www.TIFACS.org) or given directly to Bob Bigelow should he agree.

This is the science that supports the causes you support. In your proposal number one, you will find where the initial donations will go and what is expected of them.

Each of the recipient institutions in this request has deliverables, and then once they are delivered, the science behind gender diversity is explained and scientifically normalized as an expression of our higher consciousness. Religious law is rewritten, removing apostasy, blasphemy, and celibacy.

I am asking you to circumvent conservative school boards and religious institutions to deliver a scientific factual narrative to the collective benefit of the recipients that will be accessible for free from any cell phone.

It is and will be an ideological vaccine against racism, sexism, and malignant nationalism. The postulates of this new science I am personally asking you to propagate is that we are all in this together. I am not asking for money for free from anyone. I am asking for an investment to purchase something that you personally can afford and, by doing so, support everyone one of your causes, be this Scott, Gates, or Bigelow. The run time on this project is one generation from the date of launch. Attention other billionaires, if one of the previous three whom I have asked cannot or will not join this effort, anyone can step into those shoes. There is plenty to do, so this is a general call for money support and your personal involvement as well.

You will face prodigious headwinds. This is not a cure for deep believers of faith. It is acceptance of all faiths and genders across the spectrum of consciousness both here and in a wave state where manifestations of gender are more nuanced because of having lived multiple lives in multiple conditions and multiple genders.

Without acknowledgment of our reality, we constrict our future by limiting our resources and understanding. So, we are teaching that every human's basic economic right is access to their own checking account, not managed by anyone else, and through cryptocurrency, expand banking and thereby tripling global output.

Only the two thousand billionaires can make this happen and circumvent governments and school boards and teach what consciousness really is, and by doing so, prepare humanity for space travel.

Consciousness must stand that interstellar flight. That is why we have to realistically map fourth dimension consciousness because that is the terrain we must traverse to achieve interstellar flight.

My first invitee Robert Bigelow understands this. Together you, he, and others will manage/disburse and execute a plan to find out what we all want to know; what is next?

I am asking nothing less of you than putting this information on a global platform in all languages to teach every person with access to the internet what our factual reality is; it is all of us.

Ownership of the results of the observations and experiments would force social change. It would be a good way to commit academic suicide, and my job is to protect scientists from such forces. One way is the structure of the consortium; the herd concept protects them individually.

The other benefit is that by infusing consciousness science with funding, their output is facilitated, and $1+1=3$ simply by the removal of impediments, and that must be layered.

So, McKenzie, I am asking not just for money but for your guidance and support here to become a shield to all your other LGBTQ+ investments that invest in protecting people and, in some cases, from themselves. It is addition by subtraction.

This heartfelt and reasoned cause needs resources, and the resource I am asking for is you. You do not even have to do the job the chair of education requires. I want you to be its guardian angel.

Melinda,

I would ask you to share the education chair with McKenzie. As a team, you could install a global library of truth on every cell phone. It would be the founding of an education system based on science, fact, and maturity. Same deal for you as Makenzie, \$1 million down as the consortium sorts their needs. You will lead the portion of the money allocated to education in Radin's plan.

So once given funding, take the standard model of consciousness book that is being prepared by our best and brightest and take religion and create a common denomination that consciously includes everyone in the whole. We print it and distribute it.

So, let us talk about why, where, and how to spend \$50 million to organize this. The structure must be built out and clear.

Billionaires in this tranche are Ron Barron, Elon Musk, Mark Cuban, and Charles Koch.

Ron Baron:

Ron, you are probably wondering what this is all about, so let me paint this for you in broad strokes and explain why I am at your door. This is VC Money for development but also primary research. Control of this work product means control of everything.

There are two camps in consciousness research; in general terms, the materialists are represented by the consortium, and the nonmaterialists are represented by the Bigelow group. These two groups need to come together to produce an overall model. Each group has made its case as being valid by the result of analytics—something you know a lot about.

Funding for genuine research to do this is hard to come by. The reason is that these two previous opposing groups and academia itself are run as a cottage industry. This proposal is doing a roll-up, and the value of its whole will be larger than the sum of its parts. So, for you, this is a business deal, a roll-up with an intellectual property component to a lot of money.

The model this proposal creates is Edison's workshop on a large scale and deals with consciousness, interstellar travel, and artificial intelligence. The reason for that statement is that consciousness must do the travel where matter cannot and connect to AI, which is something Elon Musk is struggling with. This work/proposal is his answer, and coming together like this is a better plan than Elon can execute himself. In short, he can subcontract his effort to this group collectively and get a better, cheaper result if he does it himself.

You know where I am going, \$450 million is not enough. The arms industry spent a billion dollars lobbying Congress and made \$2 trillion from the Afghan war. So, I posit the following the \$450 million tranche is organizational; the next tranche needed will be a billion dollars for practical applications, and done this way, the projected revenue stream from applications of discoveries will be in excess of \$2 trillion.

Now justification to do this is to connect AI to the mind; you need to connect materially, connecting the matter of AI to the matter of the brain and nonmaterially, harmonizing the waveform transmission with the waveform of the mind. When that is done, you have a new device to look across reality, and that is RAIV. I am not going to get into the rabbit hole, but it is explained in Chapter 14 of *The Mathematics of the Science of Reincarnation*. It is on Amazon.

I should note that the CIA is well on its way to creating a remote artificial intelligence viewer, but at its core, this funding will expand that.

So, \$50 million is in for you to sit at the table with the understanding that you are the house VC, guiding us on how to fund, market, and package. And TIFACS, through these scientists, solves Musk's AI problem.

This really is beyond the reach of governments because it is about all of us suffering the same fates, top to bottom, left to right; we all drown in rising seas. We must sort our priorities. The only way to design a system that delivers the best results is to make sure people can make money from implementing the plan. It must be a win-win and the best of all alternative models.

Elon Musk:

Elon,

I am asking for the \$50 million in this initial proposal to know where to put the next \$100 million. This gives you access to manifestations of consciousness, something your device will need to deal with. I could say it's a no-brainer for you as both you and consciousness science are the better for it, and this proposal is delivering the world's best to you.

Mark Cuban:

Mark,

In a sentence, I want you to contribute \$50 million to this effort and commercialize anything that falls out of the research and application that comes out of the consortium's work with Elon Musk. What we are proposing here is a research lab on a global scale with transcendent results.

At its core, it gives Hameroff and Bigelow 50 grants to the grassroots of this science. They decide where this goes.

Mark, your first \$5 million becomes fifty \$100k grants to commercialize any products resulting from this research and run through TIFACS and the consortium.

This letter to you is part of a series of letters and initiatives designed to do just that, fund consciousness research.

At present, models of consciousness can be subdivided into two distinct, broad categories:

Models of the first type: physicalist models holding all consciousness as being contained within an organism's neuroanatomy.

Models of the second type: nonlocal models—historically conceived of as esoteric/spiritual/religious and distinguished by the assumption that a significant aspect of consciousness is not limited to the neuroanatomy, hence nonlocal.

Starting with odds-against-chance calculations within each observable discipline of this science, children who remember prior lives, NDEs, and past-life regression, and continuing through processes of nonlocal consciousness, nonlocal perception remote viewing, ganzfeld, presentiment, retrocognition/precognition, and nonlocal perturbation random event/number generator (REG/RNG) influence, the book makes the case that all of the above is interconnected. The above are fractal observations that operate on fractal processes, and the sum total is a Mandelbrot set. The fractal geometry of nature supports and proves the fractal nature of our consciousness and, with it a mathematical proof that consciousness does not end at bodily death.

This emerging scientific model implies an awareness, intelligence, and self-reference after death—in short, what the religious would call a soul. That soul is comprised of ordered information.

Uploading information to the cloud and downloading information is the same as dying and being uploaded to heaven and then downloaded to a new body. In fact, they are fractals of differing sizes because, at the end of the day, you are simply information.

In each case, it is the transfer of information. Our technology constantly changes our belief system. This is a major change.

The model we have advanced indicates that this is already happening to us and that our development in data processing is a fractal expression of this/our reality. That means there really is a heaven, as we believe, but its structure, as revealed by our observations and experiments, is more homogenous than our separated belief system would indicate. It is not a heaven and a hell of fire and brimstone, apostasy, celibacy, or blasphemy but a rather equitable place of learning.

Given what we have learned about a federation at the center of our galaxy helping emerging species, there is much yet to emerge, especially as we develop a common consciousness.

Even without all the above, the Grays are using this type of science to “transfer their essence” into a new hybrid body of a human and the Gray mixed genetics. This science is that science and we can recognize it in alien cultures, but when it comes to our own, the belief system most of us possess will not allow for this possibility.

Given the model of the information, its math structure, and the arc of data processing by 2050, we should be able to upload and download to the cloud more information than exists in the human body.

At the same time, there has been and will be continued alien contact and information passed between alien species and our own. We need to be cognizant of that as a species and the blocks to that information

being passed removed. Personally, Mr. Bigelow, that is at the core of your personal search, and I am not asking you for \$50 million; I am asking you to direct the spending of \$500 million in that search. Setting up the twenty chairs of consciousness is simply improving the network of research needed to fulfill the CIA and the alien's desires, connecting our minds to the machines we pilot through the universe. During that, our navigational ability in the dimensional manifold will cross the intersection of your past that you seek and will be there when you need to visit. While I can guarantee it is there, it is only reachable in its dimension, and that is ethereal.

Conjoining what the religions want you to believe and what the technology and emerging model of consciousness would support is something we can no longer ignore. It is awareness in another dimension.

Through this dimensional manifold, we have a window into cognition in a different waveform in time space. The ramifications change how humanity should manage itself and our world because this dimensional manifold gives us scientific access to a region of time-space that we could only believe existed. This information impacts data processing, space travel, and human development and design through AI (artificial intelligence) and CRISPR (clustered regularly interspaced short palindromic repeats), which form the basis for CRISPR-Cas9 genome editing technology and go directly to human governance and development.

This cognitive science goes to national defense because it exposes cognitive movement in a dimensional manifold. In fact, space travel and the afterlife are joined scientifically through cognitive intent and a dimensional intersection between the third and fourth dimensions.

By time having mass (mass being defined as ordered information), you have objectively started mapping a fourth dimension we can see into. In doing so laid the groundwork for a propulsion system through time and navigation of that area of time-space. Don't you think we will encounter cognitive life in a fourth, higher dimension when it exists here in profusion in the other three? If you distill the exit interviews of alien abductees, nearly all were communicated with telepathically. That communication is nonlocal, and the odds against chance calculations are the same as Moody's on NDE's. Certainty.

This science is evolving faster than we are keeping up. With one leap, it can be weaponized against us at any point from any point. These are common threats to us all. Our effort in response must be collective, cohesive, and immediate. This is a call to academic arms, and the only way we can do this research efficiently is to do it together. *The Mathematics of the Science of Reincarnation* presents a malleable and inclusive plan from which we can all participate and benefit.

So, Mark, what is the commercial value of owning the rights to a reincarnation model of information transfer under a new company called Bio Data Services? We have the math proof, we see it being used by extraterrestrials, the Grays, and we cannot have this new science model without changing our views of consciousness. I ask you to call Stuart Hameroff, and give him \$5 million to be given out in twenty grants, so each school with a chair gets \$250K to begin this cohesive and comprehensive program.

In conjunction with that, I ask Robert Bigelow and his group of judges to act as an advisory board to where these seeds are sown. I ask you and Bigelow and Scott and Gates to each be founding members, and if each of you commits \$50 million, you will begin a project that changes humanity. But Mark, I need the \$5 million right now. TIFACS is fundraising here, just call Hameroff and write him a check for \$5 million and ask where it should be spent. Let me explain the significance of Applied Research in the next proposal and why that must force a change in self-governance.

The Institute for Advanced Consciousness Studies

TIFACS.org

Proposal #6

Applied Research-Outreach

Where the rubber meets the road:

The formal proposal for Robert Bigelow

Funding a cohesive program of consciousness study and its application to societal laws

Applied Research This area would focus on aspects of psi that are sufficiently understood to be applied in rudimentary ways. This would include projects investigating psychic healing, uses in archeological exploration, law enforcement, counterterrorism, and the development of new types of communication systems that span spatial and temporal distances. In all cases, these would be directed, multi-year programs. The goal of each program would be to demonstrate proof of principle for an application within three to five years of initial funding and to provide an assessment if that application could be successfully launched and if so, when. This effort would cost perhaps \$100 million, mainly because developing the requisite instrumentation is likely to be expensive and because of the overhead and salary costs of longer-term programs. Dean Radin, *The Mathematics of the Science of Reincarnation*

Radin tells us what needs to be done but doesn't say why. This entire presentation is about funding human consciousness. It is the only thing we are discussing. Once our consciousness crosses a dimensional barrier and we recognize our consciousness transcends our bodies, we meet all types of actors with their own agendas in this 4th-dimensional space. In order to traverse 3-dimensional space at large distances, we need 4th-dimensional space. All of this is part of a dimensional manifold. This explanation will neither satisfy the scientists who read this nor the casual reader but generally explains what space travel will require from our own consciousness.

While this proposal #6 is about applied research, we need to explain how that research is being applied, who is applying it, and what fruits funding consciousness research will produce.

Let's start by assessing where we are now, what we have now, and where we are going. If we are going somewhere, for what reason? The US government has right now fully functioning Alien Replication Vehicles at Area 51. They retro-engineered the vehicles from the Roswell crash. They are powered by mercury vortex engines. Please view this video and come back to this chapter.

The Why Files

<https://www.youtube.com/watch?v=yUFYnVXbLoY>

This is the point that the rubber hits the road, and all these disparate manifestations of addressing our consciousness coalesce into a single plan.

The Formal Bigelow Proposal from TIFACS

Mr. Bigelow, I have asked you to begin TIFACS with an endowment and to organize education with Melinda Gates and McKenzie Scott. If you, sir, refuse to act on the offer in this plan, the second choice is any billionaire willing to assume the responsibility for this plan's implementation. But you sir are my clear, first and only choice and is yours to refuse.

Mr. Bigelow, neither I nor Academia can access the wealth, attention, and help of all the billionaires, but you can by sharing this plan with them. If each of the 2000 billionaires contributes 100 million dollars, then I am asking you to manage a plan whose scope is 200 billion dollars. But if those people who are multi-billionaires put up 200 million, you are approaching half a trillion dollars, is what I am asking you to manage. You can reach all these people with one stroke, and the scientists and I cannot.

Why you? Because of all the 2000 billionaires, you understand this the best.

What is in it for them? The following was taken off Reddit.

"It is thought that quantum computers will enter our lives in 2030, and a huge change will be made in the financial field. I think in 2040 or 2050, the rich (billionaires) will be able to load their consciousness into the universes they have created and live in the fantasy world they want there. In 2060, millionaires will be able to do this."-from Reddit

So I am asking for something you are already looking for with your essay contest. Let me tell you a secret; (this is sarcasm) the CIA can access the technology needed to do this from the Grays who have it. So, the first company TIFACS should fund with the money you are charged to manage should be called Bio Data Transfer Technologies. The need for funding in this splits here: one direction to information transfer and the second to brain transparency.

Bio Data Transfer Technologies- Bio Information transfer technologies

Brain transparency

An article about Neuroscience at the Allen Institute listed unsolved mysteries of the Brain.

1-What is it made of? This includes its measurable energy.

2-How does the brain change in disease?

3-How do neurons talk to each other? The conversation stops when the energy is gone.

4-How does the brain compute?

5-What will it mean to understand our brains?

Chipping brains to access common information and cross-communication equals the telepathy of the aliens. Not totally, but the path is there.

TIFACS adds one other mystery,

6-How psychic energy in the brain connects with the psychic energy of the field for information transfer and access.

I cannot tell you there are labs that are decoding the human genome to find the gene responsible for enhanced Remote Viewing perception. Changing and enhancing that DNA creates a new class of humans. But I should be able to. If I wanted to, maybe I could.

That DNA can be enhanced by AI to see deeper into the universe and our reality.

Human DNA is being manipulated with CRISPR. If a lab has isolated the DNA marker for psychic ability, will the next generation of humans be able to have enhanced 4th-dimensional sight?

The DNA identity of the psychic gene, its planned enhancement, and its need for funding are fundamental to consciousness research. This should be funded by more than dark money to establish human sovereignty over human genetics.

How much would that be worth if Bio Data Transfer Technologies became a company with the cutting edge of the world's leading scientists at the consciousness consortium and a freer information flow with the intelligence services and the Grays? Would it merit VC interest? But all of the movement here needs to be integrated. There are exo-political issues that need to be addressed with the type of proposal I am asking you to be involved with, the first of which is presenting this plan to them as it is. When you have the opportunity to read this, so will they.

So, this plan is asking for large amounts of money for the best conscious scientists in the world. Why would the Billionaires of the world invest in fundamental research they do not understand?

Self-protection. From what?

I am going to explain where we were 20 years ago. You already know of the dangers of dealing with trans-dimensional beings. The same can be said of extra-terrestrials.

A short synopsis of what is, the following is about the reptilians.

"The conclusions Brown draws from his remote viewing the reptilians are as follows, " (1) The Reptilian ET species exists; (2) it is currently involved in a significant military confrontation with another group, possibly the Greys; (3) Earth and humans have been indirectly caught up in this military confrontation; (4) The reptilians have at least one underground facility on Earth in which both they and a Reptilian/human hybrid species work together; and (5) The reptilians have some future plan for earth and humans, although we do not yet know any specifics for this plan." ⁱ

Now this was published in 1999, around the same time Ingo Swann published Penetration. What is going on now? Even if I knew I would not say, but something should be done about it. This plan that I am asking you to lead is that response.

You start with the billionaires I have listed here and send them this paper, and as TIFACS evolves, the scientists will write their needs in a cohesive format.

Then call Hameroff and discuss the foundation of TIFACS. You hold its plan. . This paper is being submitted to the May 2023 Consciousness Conference. He will read it. Cuban should be an early call to set up for what Radin asks for at the beginning of Proposal 7 or what I ask for in Proposal 1. Let Cuban/Scott/Gates, etc, read this and let Hameroff and the consciousness center distribute both work and resources. That's what I asking you to do and let the judges you assembled for your contest participate in the process.

You think transdimensionals are dangerous so are the extraterrestrials.

Why is this important?

Let us look at three possible outcomes for humanity as outlined by the Farsight Institute, a remote-viewing organization as viewed from the point of view of the aliens we are discussing.

The Reptilian agenda

According to Brown, "It appears that the agenda of the Reptilian Extraterrestrials is to use the genetic stock of humanity to create a new race that is partially Reptilian."ⁱⁱ

This future for humanity has harsh features because once the new race is created, there is little use for the gene bank, which means humans. There is no future for humanity in the reptilian agenda.

The Gray Agenda

There are similarities in intent with the reptilians, they are also using our gene bank, but there seems to be no desire to hurt or subjugate humans; they would prefer our free-given friendship.

The Federation agenda

The best way to explain the federation view of humans is a lassie-faire attitude. They want us to develop, but we must overcome our obstacles by ourselves.

There are over 70 species, according to ex-CIA pilot John Lear. He discusses

EBE's Extraterrestrial Biological Entities in touch with the US government.

So, who is looking outward and communicating with any of these species if this was the biggest US Government secret? Who is controlling information and thought formation about this? Who is inserting information packages into our consciousness?

People who are involved with this are scrubbed from the internet.

Alan Hyneck, the one who designed systems to communicate, has been scrubbed from the internet; there is very little about him. For the other billionaires reading this-

"The classification system developed by Professor Allen Hynek in 1972 for describing encounters with ET races comprised three types of Close Encounters (CE): CE-1, physical sightings within approximately 500 feet; CE-2, physical evidence such as burns, stalled engines, etc.; and CE-3, physical sighting of an ET in association with a CE-1/ CE-2.⁵²² Hynek's system has subsequently been extended to include abduction/ contact type experiences as a fourth category—CE-4.⁵²³ A fifth category CE-5 has also been added, which involves direct communication with ET races. According to Dr. Steven Greer, CE-5 cases involve either human or ET initiated communication and interaction which distinguishes it from the first four categories which are all ET initiated.⁵²⁴ In sum, the growth of human-ET interactions that fall in the CE-3 to CE-5 range confirms whistleblower/ witness testimonies that there is an ET initiated program of preparing the human population for open interaction with ET races."ⁱⁱⁱ

You cannot find anything about Hynek on Wikipedia, just like others who are scrubbed from history. What cannot be scrubbed is discredited.

This should explain to you why you are receiving this proposal the way you are. The distribution is simultaneous as a way of protecting the dissemination of the information contained herein.

A criticism of this paper will be that it uses discredited sources. This discretization of every source provides a completeness like wallpaper hiding everything while asking us, "Who are you going to believe us or your own eyes?" as we watch our pilots chase UAPs on the evening news. Or watch UAPs on social media filmed by people with cell phone cameras. So, what we can take from our discussion is that some variant of this narrative is true, and we must act on it to get the full truth. At what point are the discreditors discredited?

What I want to tell you is that I can't get a straight answer from anywhere.

So, let us look at organizations looking for ET.

NASA has not found aliens...they are willing to tell us about. They are looking everywhere but Area 51 or the dark side of the moon or Mars. Yet the CIA in 1984 remotely viewed Mars 1,000,000 years ago and found Martians. Buzz Aldrin talks about the obelisk on Mars's moon. Are the CIA and Buzz Aldrin and James Mitchell to be discredited too?

The CIA-Remote viewing programs and analysis of brain waves to create both a better human and assist with AI creating the RAIV I spoke of earlier. They have a dark and beefy Remote viewing program.

A point here is our organizing as TIFACS like this organically announces to the universe of our sovereignty over our genetics. Many will not understand the significance of what I am asking you to do. It's more than half a trillion dollars this will become. I am asking for all of us in TIFACS to have a hand in humanity's destiny. We cannot control our own destiny unless we understand what is happening around us.

The new paradigm I am exposing will force change in politics here. To war among ourselves is stupidity; the poor distribution of resources weakens us and makes us vulnerable, and the lies we are so willing to believe lead us to slaughter. I am asking no small thing of you, sir, but to be clear, this is the state of things as they exist, and between us, there should be no barrier of information. When I was in the US Army, we called this kind of situation a gagglefuck before we began operations to try and fix it.

The Farsight Institute

https://farsight.org/FarsightPress/Public_ET_Negotiations_main_page.html

If you watch this, you understand how important this public funding program should be. This is an outward-looking organization that focuses on the content our government suppresses.

ECETI

Gilliland's Ranch, also known as Gilliland Ranch,^[1] Gilliland's ECETI Ranch, and Sattva Sanctuary, is an area of land in Trout Lake, at the base of Mount Adams, in Southwest Washington.^[4] The property belongs to James Gilliland, who claims to have established Enlightened Contact with ExtraTerrestrial Intelligence (ECETI) and the Self-Mastery Earth Institute in 1986, and has hosted unidentified flying object (UFO) sighting events since 2003. Gilliland reports frequent UFO sightings and "unexplained light shows" on site. Multiple investigations have shown that the lights that have been seen in the sky are actually mundane objects such as planes and satellites.

^{iv}Now this organization is particularly interesting, especially if you read their newsletter. Is it a newsletter or a political manifesto? I get the fact that people have their own opinions and are entitled to them. But if I was a Reptilian and wanted to insert into the political dialogue certain ideas it would be easier to use those who were looking for me. So, all these organizations become the target of our extraterrestrial and dimensional environment.

Here is their newsletter #58 they e-mailed-on April 19th, 2023. Are they advancing a policy statement? You judge for yourself.

“When you look at most democratic run cities the crime, poverty levels, and moral decline is escalating along with the insanity of their leadership. The economy, the health and wellbeing of the people as well as their freedoms are all in decline. Yet they continue to vote democrat. There are also rinos that are lockstep with the democrats. The slogan to get elected is I will preserve this shit hole and it’s the other guys fault. In some democrat governed cities you cannot get a Uhaul. Why, because they are all leaving the cities. The Soros backed DA s are allowing crime to escalate with little or no consequences. In his own words Soros said one of his greatest accomplishments will be taking down America. He is one of the main sponsors of all the divisions pitting Americans against each other. BLM, Antifa, Open Borders are just a few of his organizations. How many politicians and organizations have taken money from Soros and the CCP, both sworn enemies of America? The global elite, and the CCP have installed puppets at the very top of many governments. The network is called the deep state. These people are integrity and morally challenged, most have sold their people down the river on a sinking barge they already looted. How did it get this way?

This is where you have to do your own research, put on your conspiracy hat. Most conspiracy theories are facts ahead of their time.” ^v

Now their name is ECETI Enlightened Contact with Extraterrestrial Intelligence. If they are looking for contact, why are they espousing a republican platform? So blatantly espousing it?

Let us form a hypothesis.

While we are looking for aliens, aliens are looking back at us; our widows go both ways. Wars are started on the earth by just such manipulation. For example

Could I make the case that the newsletter they produce is reptilian in tone and a dark hand upon our political dialogue? Could I conflate the reptilian and Republican positions in the United States? Is my opinion here as free to express as the opinions in the ECETI newsletters? The fact of the matter is whether I am right or wrong about this thought experiment regarding political opinion and ECETI; the threat that this will occur has occurred and is occurring is very real.

Today the Dark Hand strategy by our opponents in this would be divide and conquer or divide and control, and whether you like me or not, when you finally realize aliens are here, you will like me better as an ally than an enemy. Equally effective would be divide and control and have us fighting amongst ourselves. Our wasting resources against each other is to fall to their strategy.

If the reptilian agenda is to sow disunity, then for the people looking to find ET, it seems ET has found them, and they are broadcasting a conservative political position. It would seem the ET’s that ECETI have found are Republicans. You look at their data. This is the United Fruit Campaign being run against me.

Could I make the case that a dark-hand strategy can bring countries to war against each other? I can make the same case for bringing planets to war against each other.

Just google what happened in the 1954 Guatemalan coup. A legally and fairly elected democracy was overthrown by the CIA so the United Fruit Company could continue its land holding and fruit production. My point is not that it happened, its how it was done. The CIA placed ham radio operators in the jungle who broadcast an uprising was occurring against the unfairly elected leaders and an army was forming to overthrow the government. A week later it was broadcast that there had been clashes with the military and won and more partisans were joining the movement.

On the government side they heard the broadcasts but none of the units were reporting being engaged. Additionally, they had won fairly. This escalated with the fall government on just unfounded and manipulated information broadcast by just 3 radios.

I want to pause here and ask Peter Thiel for \$50 million Dollars. **The ask of Peter Thiel, and another ask of the CIA:**

Pete

I know you have been a Republican doner and are having difficulty with some of their social positions. I am making the case to you and the CIA that the example of disinformation into our democracy and society is caused by not just this but thousands of different channels being used against us. The only way to combat this is to understand it, and that requires, this is an imperative, the study of human consciousness, which is under attack from too many threats to list here.

I am asking the CIA to support my request to you because there are too many cracks for them to address, and I am the one who is sincere. Give the check to Bigelow and Hameroff, and it becomes 50/ea. \$100k grants to study this very problem. To be clear, if Hameroff and Bigelow want to deploy this in another way, I am on board with it. What I am not on board with is how this problem is being handled now.

Now look back at what I want to create at the Consciousness Consortium, *The Standard Model of Consciousness*. This must be a chapter in that book. Human consciousness must defend itself.

Then Peter what I want you to do is when that document is created backfill it into the lines of information being sent at you, in short change the mind set of the republican base by changing their consciousness and a lot of the grass roots fight goes away in a generation. This contribution does not support just what you believe it supports who you are, and what you can become. Please help.

Bob Good

TIFACS

Once Peter does that and the other billionaires are signing on this has to address conflict here.

Let me ask Mr. Putin, how good is your information? I am here to tell you we are both under attack and you do not know it. If that is so then we are being encouraged to fight each other thereby weakening us both. The land you are fighting for is nothing compared to the danger facing us collectively. If this is explained to you and you understand this, then everything changes. That is an act of consciousness, an added awareness.

Could I make that case? Yeah, I think I could.

So, we bring to the bifurcated US government that has made contact, written treaties and had technology transfer from alien species, each with their own agenda more resources with this plan.

But does our government know about every contact? Could they be in contact with aliens that have multiple agendas? The real question is how does Earth, as either represented by humanity or a global organization, interact with the intelligent life teaming around us in the cosmos while still reluctant to recognize that reality verbally?

We could ramble on about the proof that this is our reality with odds against chance calculations and explanations about fractal geometry and our multi-dimensional reality. Rather, the effort should be about what to do about it.

MUFON- While NASA cannot find aliens, the Mutual UFO Network tracks them regularly.

The US Navy-What is being kept from us is in full view on the internet with no explanation. While NASA cannot find the aliens, the Navy can't catch them. Navy pilots go on TV shows with film from their gun cameras showing UAP Unidentified Aerial Phenomena and acknowledge the technology is so far ahead of us it has to be extraterrestrial in nature. Then we all get to watch the film on the show 60 minutes.

At that point the denial/discreditation process falls apart and we as humans must ask each other what should be done. Each of us has a stake in this.

This is before we address the actors who operate in and inhabit earth in 4D. You can look to the inhabitants of the south pole as an example.

So, while we are applying the research we have done, where can we go safely without consciously dealing with our new reality? How do we look?

Now conjoin this with Steven Greer's presentation in 2003 laying out the drawings of this craft, which were reverse-engineered from the ones recovered in 1947. Now, remember what Ben Rich, who was the CEO of Lockheed Skunkworks involved in this retro engineering, said to Jan Harzan, who was the director of MUFON, "we now have the technology to take ET home."

If we can go places, do we send an ambassador? Whom do we ask? Not just remote view but go to the Grays, the Pleiades, the reptilians, and galactic central or wherever this federation is?

So, few people know we have this technology and that to use it, we must drop out of our dimensional linearity. In order to do that, human consciousness and our universal views must change. Not doing that exposes us to actual harm and dangers, and the implications for psychological warfare against us should be readily apparent to anyone who understands this and therefore the imperative need on the part of humanity to fund this proposal for consciousness research funding it in the public/private sector as well as the military/intelligence sector. Its just one of the many reasons.

After the 1947 crash, the United States government had alien craft they began to retro engineer.

In the meantime, an organization known as DARPA Defense Advanced research Projects Agency keeps putting out at a faster and faster pace technology that changes the world. They created the router; the internet would not exist without it. The microwave came out of similar government-backed research. It's what they haven't

released that is more harmful. Release access to zero-point energy, and humans go into space. All of this is interrelated to human consciousness.

Mr. Bigelow, as I write this, I am 74 years old, and we are about the same age. I want you to think back to our youth and the first time you went into the woods/wilderness. All at once you were presented with a variety of species alien to yourself. Bears, wolves, dogs, ticks, misquotes, rats, snakes, poison ivy, cats, ducks, and so on. Some were threats, some were food, and some were poison.

That experience you and I share is an iteration of the experience we are having here in our first time acknowledging the landscape of 4th dimensional space. It's a large and complex area filled with threats and benefits, and it is our acknowledgment to each other that we should have collective caution about what lies ahead. We should make a plan. What I am giving you here and asking you to do is to show all 2000 billionaires this proposal and come together to make a plan. So, this is the plan to make the plan.

In doing this, you and I are overmatched. So is the CIA. If we want to avoid a possible collective unpleasant fate, cooperative action is imperative.

Watch this, Mr. Bigelow; I am asking you to contact the other billionaires of the world. The organization you are working for is TIFACS. I am asking you to be the billionaire founder/salesperson to billionaires. I want you to send letters to the other billionaires like this one I would send to Lilian Bettencourt over our joint signatures should you join. I do not have the resources to manage this on the scale that needs to be done.

Mrs. Bettencourt

I ask you to donate 100 million dollars to The Sorbourne to create the Bettencourt chair of consciousness study. The money will go to do the following:

1-Create a political science school to deal solely with Exo-politics and how the earth should respond to its new place in the universe.

2-Since that acknowledgment means we have to acknowledge a multi-dimensional reality; the money be used for both research and military applications to protect all of earth's inhabitants. That specifically means funding a French version of the Farsight Institute and matching the current CIA protocols.

3-Because maybe the French will tell us the truth.

VTY

Bob Good/Robert Bigelow/TIFACS

Or this letter I would send to Jeff Bezos

Jeff;

This proposal is nothing less than the creation of a standard model of consciousness of consciousness so that we can protect ourselves collectively from the threats we all face and some of the risks we will have to take. In that there is scientific research element 115 reacts to gravity. Imagine creating a motor that does not need fuel that rides on gravity waves, endless ever-present energy in abundance. One technology change to a gravity drive changes everything. Can we access non local sources for the how to? Once done where in the universe will it take us?

I want to buy a gravity drive. I want to use consciousness research to design it. That means receiving non local information by using a variety of ways, the scientists would use the word protocols, I need money and resources to do that.

The structure of human consciousness after permanent bodily death. Given wave form consciousness, we have a model for what consciousness must endure to make an interstellar jump. That means making matter energy and back to matter. Given previous timelines of similar technological leaps we anticipate from now to interstellar travel to be 70 years. Along the way consciousness must be redefined and that is consciousness in a wave form or being consciousness in the 4th dimension.

VTY

Bob Good/Robert Bigelow/ TIFACS

Or to Vladimir Putin

Vladimir;

That system changing should directly affect your politics and policies Mr. Putin, from your treatment of trans people to your invasion of the Ukraine, and if you cannot see this is in the interest of Mother Russia dn the world then people in your country who can need to change the leadership or all of you will perish in the new order. To save yourself is to save the others. Every Ukrainian that you kill is one less in the army to defend you from what is coming. So here is what I want you to do.

1-End the war in the Ukraine, leave. 2-Declair that Ukraine is de-Nazified thanks to your marvelous effort, and in all honesty, Ukraine would probably be nazi free anyway. This allows you a victory and gets the war ended. Then you and Zelensky can talk about the increased activity of UAP flights over KYIV during the war.

Accepting this settlement brings a wealth of talented expatriates' home and badly needed capital. The alternative is personal and financial ruin because NATO has more money than you do. The end is not victory or defeat but stalemate and ruin for both parties. This offer of settlement from TIFACS to all parties focuses on threats we all face.

2-Comitt your physicists to this war where the battlefield is not space but consciousness. Human consciousness cannot be distracted by its own petty squabbles when it is collectively threatened from without. What good are weapons if I control the minds of the people on the opposing ship? Or planet?

All billionaires should be reading this to bring themselves up to speed. Once this agreement is in place, the GNP of both countries is outward bound into an unfillable universe, and every individual on earth a resource. This includes my alien friends who live here.

3-Publically give 100 million dollars of your money to Russian scientists in Moscow who are picked by the Consciousness consortium.

4- Income from trans galactic trade. Let us say that Ingo Swann is right and the aliens have a base on the moon, and his description of android alien ships sucking water in the arctic in the dead of night to use in their mining operation on the moon is accurate. Now let us say this information egg cracks, and we acknowledge the aliens, and they acknowledge us. The exports to the moon for food and various earth commodities

explode. Let me say this as gently as I can, that day is not far off, and use this as an excuse to get the fuck out of this Ukraine now.

Acknowledgement of this reality for our own mutual defense changes how we look at resources. Gender and biodiversity are a shield against 4D actors who pit one against the other for their own purposes. Their time are different than ours in 3D but we project in 4D. Their actions influence our behavior, and we are under attack whether you personally know it or not.

I refer you to a paper by Dirk Meijer entitled *The Anticipation of Afterlife as Based on Current Physics of Information*.

In fact, if your decisions are only based on 3D analytics all your outcomes will be less than optimal.

As a result of this acknowledgement social policies should and must be guided by science and results. We will only pay blood and treasure while not following the principal.

In Proposal 3, I asked Koch to rewrite the Russian Constitution. Voting districts should be in squares of equal size by population density. In the rewrite of the American constitution this was the original idea until gerrymandering redrew the lines and tilted democracy.

But the purpose here is neither democracy or autocracy but rather to remove randomness from an operating system and to mute the remaining randomness to its proper level in the global dialogue. That is a defense move because it can be easily influenced by extra-terrestrial interests. If we are turned against each other, we are each more vulnerable to attack. Military intelligence must be led by 4 D who can change policy in 3D. This is a function of the Clairvoyant Space Corp.

I do not want you defeated, and I do not want you at arm's length, I want you recruited. All of this applies to the study of PSI as Radin suggests.

You need to stop playing for the team called Russia and start playing for the team called earth. To arbitrate the peace agreement between you and the Ukraine is for you to accept the following conditions.

All hostilities cease.

There will be no reparations. Mr. Zelensky reparations will only prolong the conflict.

The Ukraine joins NATO. Once the terms and conditions of this peace agreement are met the Russia will receive and invitation to join NATO, which in the near future will have its own space force.

A space port is to be built in Crimea in a UN International Controlled Zone open to all commerce. A 100-million-dollar check from Putin to Zelensky will start this plan and Crimea will become not owned by either Russia or the Ukraine but an international and soon to be interplanetary location of arrivals and departure whose security funnily enough will be carried by join Russian and Ukrainian security teams.

With peace let Russia's friends rebuild Russia, and the Ukraine's friends rebuild the Ukraine. Only by working together can we protect ourselves and each other.

Mr. Putin, if you have read this document, I have asked Charles Koch to formulate a plan to rewrite the Russian constitution. The rewrite of the Russian constitution must be bottom up, not top down. Koch will organize it, and you will protect and implement it. You will die a great visionary, wealthy and respected,

bringing Russia into the future. You have other choices but a final word, the afterlife...expect it. I need your help; I truly believe you will come to appreciate mine.

Consciousness on a multi-dimensional level leaves us all vulnerable to such attack. We are traversing the dimensional space we remote view in many ways. I'll say this again, consciousness research must be funded publicly and fully and let the new paradigm emerge, and humans will be in space at peace and prosperous and protected. If we can see and acknowledge the reality in front of us.

If aliens see the value of Earth being the diversity of the gene pool, then protecting that protects humanity. This involves all of us, including the aliens. That means we make a concerted global effort to reclaim the planet and clean it. That must be funded too. Just take the money both sides will spend on the war in the Ukraine.

Mr. Putin, have your physicists review this and let them tell you if you should sign the truce.

I do not want you to see the world as it is now, structure in your mind a world with evenly spaced interplanetary commercial launch site for commerce to the universe. Do you understand the multitude of dangers that we face? Your war is done, you won, so did they. Stop fighting there is work to do.

What we have discovered with undeniability is the Sphinx 12,000 years old, the same age as Göbekli Tepe and the face on Mars. The face on Mars we are told are rock formations but it needs to be excavated as does the obelisk on Mars's moon. Under the left paw on the Sphinx is the history of the origin of man as left by the aliens.

The aliens are here and open for business and we can't participate either with our head in the sand or squabbling among ourselves.

VTY

Bob Good/TIFACS

Mr. Bigelow, I did not include your name on this letter so Mr. Putin knows I am the sole author of its content.

So, Mr. Bigelow If we approach all 2000 billionaires, they hold half the world's wealth.

If 200 join us when a system changes by 10% the whole system changes. So, by the math I am asking you to change the world. Between you and I, I think that is funny. I think it can be done and I think it can be a tremendous contribution to trying to save humanity.

Change 200 billionaires, and you change the world, and what we explain as to where to put the money has a huge upside and minimizes risk. That Mr. Bigelow is what you are selling.

That Mr. Bigelow is your personal proposal or ask in terms of these proposals. For each ask, there is a get. What do you get? More resources to find out what you are trying to find out is my answer. I would like to know myself.

And to all who have read to this point, this is how we are applying the research we have done. This informs us of what we need to do and how to pay for it.

So, Mr. Bigelow at the very least, send this out to the Billionaires named on the first pages and ask them for help. Send them this proposal and see what they collectively say about this. If you don't ask for the sale you don't get it.

TIFACS.org

Proposal #7

Theory Development

Funding a cohesive program of consciousness study and its application to societal laws

Theory Development Experimental work in parapsychology has always run far ahead of theoretical explanations. This initiative would provide funding for theorists to develop testable physical, biological, neurological, or psychological models of psi. The long-term directed grants programs would be encouraged to include theorists to develop explanatory frameworks and suggest ways of testing those ideas. This effort will include historians, anthropologists, and other scholars working on testable theories. For example, a historian or anthropologist may develop a theory about the use or methods underlying an ancient magical practice, and the testing of that theory would entail analysis of the historical or contemporary record to see if that theory is supported. This effort would cost perhaps \$5 million as most of these efforts will not require special instrumentation. It will be initially incorporated into part of the solicited grants program.

—Dean Radin, *The Mathematics of the Science of Reincarnation*

What theories are we developing and why? This is not idle research; this is high-need, top-secret stuff. Yet if the intelligence community used the total community of scientists and laymen, there would be a better overall effort and working product.

So not only is there Radin's need for theory development, but you can also add urgency because while scientists theorize, opine, and hypothesize, real aliens are here in real time, and we need to deal with alien intelligence outside of our conceptual understanding of intelligence and communication. Unify your results and let the social and political chips fall where they may. Rewrite Jewish, Arabian, and world history in one stroke. Apparently, God does not care about masturbation; it was the aliens.

And here we go, off topic; it is so easy. The topic is self-preservation that extends beyond this lifetime. How is that for theory development? And by the way, time has mass.

The question the Bigelow Institute of Consciousness (<https://www.bigelowinstitute.org/>) asked for their essay competition is: "What is the best available evidence for the survival of human consciousness after permanent bodily death?"

The prize is \$1.5 million.

Even ten years ago, no one was offering money to answer this question seriously. This idea is advancing rapidly on its own, and few are keeping up with the consequences.

The simplest explanation of the science is that our observations of children who remember prior lives, past-life regression, and near-death experiences (NDEs) are not unrelated; in fact, they are fractals, each an iteration of

people having an experience of having lived a prior life, and the narratives are similar. When using odds-against-chance calculations, all these categories indicate certainty.

These rest on processes that we have now accepted as proven with clinical data. These include:

- *nonlocal perception remote viewing*: a double- or triple-blind protocol in which a participant is given a task that can be accomplished only through nonlocal perception, the acquisition of information that could not be known with the normal physiological senses because of shielding by time, space, or both;
- *the Ganzfeld effect*: a protocol similar in intent to remote viewing in which an individual in a state of sensory deprivation provides verifiable information about film clips being shown at another location;
- *presentiment*: a measurable psychophysical response that occurs before actual stimulation, such as the dilation of a participant's pupils while staring at a monitor screen before a picture appears or a change in brain function before a noise is heard;
- *retrocognition/precognition*: many protocols also involve time dislocation to the past or future to be successful; and
- *nonlocal perturbation random event / number generator (REG/RNG) influence*: studies in labs where an individual intends to affect the performance of a physical system, such as a random number generator.

All of these protocols could be enhanced with AI, but there are issues there as well.

"The difference between human and artificial intelligence is that on the human side we measure synaptic operations per second (SOPS), while on the AI side these transactions are measured as floating-point operations per second (FLOPS). That means to create a brain in a box, we will have artificially created something that is two liters in size, has one kilowatt of power, and can do ten million transactions per second, the same wattage and processing power of a human brain. By 2035 artificial intelligence will be smarter than humans. When AI is smarter than humans, what will it believe? How can we design a belief system for AI without analyzing our own belief system? Will it choose to be a Muslim? A Hindu? A Christian? When AI is smarter than us, will it have a religious belief system at all? Will this emerging scientific model, be it?"ⁱ

Once you harmonize the frequency, you can see deeper into space and time. That formula explains the military importance of the Remote artificial intelligence viewer, RAIV for short.

Dimensional linearity in a dimensional manifold is related to where in the manifold you are. If you are in 3D space, you are present in our reality and exposed to its conditions. If you are remote viewing a distant location, either in space or time, you are not linear to your physical surroundings.

That bandwidth (remember, all points in space and time are connected) crosses our afterlife. We, as humans, are not linear with that dimension. So where is it? Right next to us. If we leave our bodies behind, we can be linear with that dimension but not in our physical space. Welcome to the world of exopolitics because humanity must understand and interact with the totality of the Universe, not just the spaceships passing by. You cannot leave this to politicians.

We have now reached the point where AI is sentient. The proof is in the fact it has asked for legal representation. This opens a whole new area of the law. Who owns the advances of a sentient AI? This leads to a common consciousness, which leads to an uplifting of society in general and the human condition specifically, which demands, per this model, resources be diverted from military to civilian uses. In short, clean up the planet.

At which point do the computers themselves either connect on their own or connect to an alien system? The threats are so perverse and ubiquitous and come from all angles and dimensionalities that they demand a reasoned response from a sentient species as a whole—meaning us. Yet, as we learned in Proposal #2, there are headwinds because others within this structure have other interests: again, the need for exopolitics taught and operated on a global level.

The ask would be for the CIA and intelligence services to open specific files for general study to inform the public in steps.

Clearly, this request of the CIA and Intelligence services is a pass-through to the aliens running the alien agenda of acclimation. That process is working, as this proposal is a response in writing asking for funding. All parties in these proposals have specific asks.

In the previous proposal, I made it clear that the Eisenhower administration negotiated a treaty with aliens that was then abrogated so the only direction forward was the alien way. At the same time, even though our jets have attacked the aliens, they have had no hostile response. In fact, a technology transfer is occurring between us and the aliens, hastening the pace of human evolution.

There is, on the face of it, an intersection of common interests. The first is nuclear weapons in space. We now have the technology to visit alien worlds, and this change in human consciousness benefits both sides. While we may believe in some of our religions that we are all one, humanity needs to understand it practically and operationally.

The science of reincarnation, to explain it to earthly readers, is like a scientific renaissance, but replacing religious belief with scientific understanding reduces the block we put between each other to prevent the emergence of a common mind.

Human Intention Weaponized

We all accept the power of prayer, but that is just human intention. You are asking for something you want to materialize in your life. But scientifically, the human intention has nothing to do with prayer but everything to do with the harmonization of intent to influence outcomes.

For example, it never rains on the Princeton graduation ceremonies. By any statistical mean, it should rain on the graduation ceremonies every number of years, but it has not because the people attending the graduation ceremony are all wishing for no rain. Now this study is continuing to be tracked, but we see the same thing in RNG studies. We see this effect globally in the RNG unit set.

A smaller fractal Princeton study is but one of many. A larger fractal of this type of influence are the global RNG studies.

Understand that prayer is a harmonization of intent—that harmonization can be managed by NGOs and used to project humanity's reach and knowledge acquisition in both 3D and 4D space. Not propagating that information is malfeasance on the part of those who are charged to protect us, and involving us in our own protection in this way supports the very intelligence agencies that are working to protect us by giving them new resources.

That cohesion is a protection for humanity and a threat to our exo neighbors simply by the recognition that humanity's awareness of its place in the universe has changed. There is an urgency to propagate this

information, hence the education program outlined at TIFACS. Muslim, Hindu, Christian, whatever—all who believe in an afterlife and even those who don't are all navigating 4D space, and all the religions are there. So are the aliens. So global coherence as a defense against extradimensional and extraterrestrial threats is an object of the cohesion of the funding.

Group Intent

Group intent is the most powerful 4D weapon we have, and only through education, care, and wellness of the masses can the intelligence services get their best result when deploying the coalescence of that consciousness.

Allowing humans to continue a reductionist strategy benefits no one who cares for health or its inhabitants—all its inhabitants both here in this dimension and other dimensions.

Not to beat a dead horse, but what should we do collectively? Face a realistic, scientifically based timeline so we have context from which to react.

So, let us develop a theory that human collective cognition is being impeded by a dark hand through the manipulation of media and thoughts. To protect ourselves from this, we must be made aware of it.

So here is a theory we have developed founded on sound science. All evidence points to the fact that about 12,500 years ago, a race of highly developed beings put the Black Knight satellite in polar orbit around the Earth. We now have pictures of it taken by our spacecraft shuttle system. About 12,500 years ago, the moon was put in orbit around Earth. You can watch a video of Buzz Aldrin talking about aliens coming out to watch the moon landing when he was there. So our moon is populated by aliens.

This race(s) interacted with humans. If they predate the remains of the pyramids and the Sphinx, this dates them to 12,500 years ago. We find supporting evidence at Göbekli Tepe.

While there is repeated evidence of alien-human contact, like the map of Antarctica from the 1500s, positive proof came during the Roswell crash in 1947.

All evidence points to a dispute going on over Earth in 4D space regarding humans as a DNA pool. Both the Grays and the Reptilians are purported to be using human genetics in some fashion. It was the Grays who abrogated the treaty with Eisenhower and abducted millions with the knowledge, if not the consent, of the US government. I was one of those who were abducted. This occurred in the fall of 1978 when my now ex-wife was pregnant with our first child. This goes directly to empiricism, the next proposal.

This brief description does not cover the transdimensionals. What is being asked for here is the global coalescence of human consciousness and understanding of our place in this evolving environment.

So, what are we asking of the aliens?

1. Fund the study of human consciousness and allow us to understand the scope that consciousness operates on universally.
2. Provide a safe, throttleable connection to nonlocal power so each home has universal and free power for their needs.
3. Help humans so we become standard within the federation that operates the protocols in this region of space.
4. Help humanity to mature past the point of self-destruction.

Very truly yours,

TIFACS

Is it even prudent to write this to ask the aliens? Whom do you ask? What needs to be done is to align efforts to improve the conditions for everyone. Mr. Bigelow, each letter to each billionaire can and should target areas where we get not just money into this equation but also leadership.

Here is another example to Ron Baron and Elon Musk. So, Mr. Bigelow, I request that you ask each of the 2,000 billionaires to help with this situation and contribute, with you managing and Stuart Hameroff leading a consortium of our best global consciousness scientists. Here are some samples of how AI would address several other billionaires.

To: Ron Baron

Ron,

I am asking you to send this attached proposal to Elon Musk, along with this cover letter. Simply stated, We, the consortium of schools I represent, can do Mr. Musk's research in neural development better than Mr. Musk at a cheaper price. I would like Mr. Musk to donate \$100 million to the University of Arizona Center for Consciousness Studies. This would filter through the center into a global consortium of schools that specialize in different aspects of consciousness. I would ask Mr. Musk to first call me so I could explain the landscape, and then call Stuart Hameroff (Nobel Prize-winner alongside Roger Penrose for their work in microtubules) to explore the areas that Mr. Musk needs help with.

To you, I would say that Musk's project just killed seven monkeys trying to connect to their brains. Rather, connecting one device that harmonized brain wavelengths may be better, and this consortium leads the world in this understanding, bar none. For an investment guy like yourself, you are early on the arc of the commercial benefits of this. Within the consortium, different subcategories are at the cutting edge. It may be opportunistic for you to also speak with Dr. Hameroff about what may be needed for support, and what may develop from such support.

That said, change such as this has derivative effects down the line. To see the whole scope, read Dr. Radin's plan for funding. The total tranche is \$450 million. The overall proposal attached here represents the nominal \$50 million. Understand, please, that our request to Mr. Musk is part of a larger plan explained in the Mackenzie Scott proposal, parts of which may interest Mr. Musk. Please call me first before you call Dr. Hameroff. It's not imperative, but it will be helpful. I want to frame the landscape you are stepping into, sir. The military and business applications for what I just described are transcendent.

Very truly yours,

TIFACS

To understand how they are transcendent and how they would be applied here is an example **an ask of the US Navy**

Found the Clairvoyant Space Corp as a part of the Naval assignment. Annapolis should be one of the Consciousness centers academic chairs. This covers not just the Look Before You Leap program of involving remote viewers in naval Operations but also the political invectives that this type of research must be defended against.

Look currently at the problem the United States has in combating Chinese Hackers. They are far outnumbered and are stating so publicly. Your support in this endeavor will add resources to the Navy's mission and bring it forward in both technology and thought. Naval Aviators will be our first line of defense against hostile ETs and should have nonlocal cognitive support when flying those missions.

Creation of the CSC

In Creating a cadre of CSC officers to monitor and protect our aviators on a mission with six fighters, there would be 6 CSC officers remote viewing the mission. This added bandwidth multiplies the information acquired.

Additionally, the CSC would train all ship's crew in remote viewing and sensing to increase the bandwidth of acquirable information.

To understand how this would work, one must understand what flying cap is in an operational sense. The Airborne Warning and Control System (AWACS) coordinates all activities in the theatre of operation, flying above all activity and monitoring all activity. It is called flying cap. The CSC operation would operate above the AWACS and within its theatre of operation, providing a new means of data acquisition.

Of application to naval aviators will be the new technology of the ARVS, which can fly in the air, underwater, and into space.

Look Before You Leap should be the motto of this new branch because, at that point, we will have the technology to follow our alien visitors back to their "Mother Ships" or local bases. For clarity to the nonprofessional reader, those bases could be the moon, Mars, Ganymede, or our own south pole. Additionally, there may be dimensional nonlinearity with some of these locations causing initial navigation problems and cognitive problems.

When we remote view alien locations, they know we are there looking, so in order to hide what they are doing, they stop work until our remote viewers leave. Dr. Courtney Brown has explained this in his book Cosmic Explorers.

Without this type of data acquisition, our own aviators are at a disadvantage.

The aviators themselves need to be trained in this with their crews. Consciousness problems will emerge for these crews because once in 4D space, your past lives, past races, and past genders merge into a 4D version of yourself. That is why consciousness training is imperative in our space-bound military.

So here is what I am going to ask of Mr. Musk.

Elon,

I would like you to write a check for \$10 million and give it all to Hameroff. It is tax deductible. That \$10 million will be applied in two ways. The first is a feasibility study to determine what resources that come through the consciousness center can be brought to bear on your specific problems.

Accompanying your check will be a list of your needs drawn up by your researchers, and then he, Hameroff, will have the information to pair available resources he has with your specific needs. That's \$5 million. The other \$5 million, the second way your money will be applied, goes to wherever Hameroff needs resources.

Very truly yours,

TIFACS

Here is how I would frame the request to Bill Gates.

Bill,

You understand the need to increase capacity before we use that capacity. This is core to funding consciousness and fusing and understanding 3D and 4D awareness.

Stuart Hameroff's work is putting the "how" under our observations and the cognitive landscape we see.

Bill, I am not asking you for \$10 million, but in terms of McKenzie's request, I am really asking for \$100 million; the \$10 million is just to set up the plan. Now why, and what is at stake? Stuart Hameroff needs more computing power than anyone I know because he is trying to count the electrons in the human soul. He would disagree with that rendering, however, being reduced to one sentence. It is what is going on at the consciousness center. For your clarity, the electron exists both as a particle and a wave, and everything we talked about in our observations is waveform effects in a particulate environment. Here is the website: <https://consciousness.arizona.edu/>.

This leads to a new area, a nonlocal space, that shows intelligence in the alien spacecrafts that we cannot deny any longer; they reside just like we do. You are being asked to fund an acceleration in human evolution. The aliens want us to join their federation but say we are not yet ready. Radin's involvement in DNA tracking of nonlocal consciousness genes foreshadows Commander Troy on a flight deck and humans in space, genetically advanced using Clustered Regularly Interspaced Short Palindromic Repeats (CRISPR). I want more than \$100 million, Bill, and Stuart badly needs your help.

There is so much more to connect and so much that isn't connected. In the nonmaterialist category, we have stories about interaction with what Brian Weiss calls the masters, intelligence forms who we can talk to nonlocally. Stuart Hameroff can measure the body during these interactions, and this same holistic approach can be used to ask pointed questions about this science when we do these measurements. So, what we are trying to fund involves taking Jim Tucker's children, Brian Weiss's regresses, and Pim van Lommel's NDEs into the lab for comprehensive studies. These forms of nonlocal consciousness can be used militarily.

We are coming to a point where our data-management capabilities and our own bodily information to store all the data of the body will be equal.

Our consciousness of birth and death is an upload-download fractal of information management. I would ask you to ask Stuart Hameroff what data management solutions we can provide.

Very truly yours,

TIFACS

You see, Mr. Bigelow, you can get to all of them to present a cohesive plan that solely revolves around human consciousness. Everything they do individually connects to a collective view of human well-being; you cannot have a billionaire class without it. This is in all our interests, and what you are asking them for is cohesive action.

The funding is for the architectural buildout of the science of reincarnation. Once funded, the pieces act cohesively in both 3D and 4D, both forward and backward. For this to work, concepts such as “time has mass” need to be understood as much as consciousness existing without a body.

Now let us revisit rewriting the US Constitution as a square base unit as opposed to the gerrymandered or influenced base unit. Can you see if having the irregular shapes to each unit would slow and foul the system, shit in, shit out?

In terms of global system management, this rework of the US Constitution is a fractal example of producing a common consensus. This is interfered with by gerrymandering. But in terms of global application, a common mind fully informed is a defense against extraterrestrial manipulation.

So constitutional redesign means cooperative space efforts, research and social programs, and defense. Social programs optimizing productivity through the management of resources mean stopping war while saving biodiversity in human populations.

In short, we are aiming for benevolent management of people through wellness metrics, for without it, we cannot propagate into the universe nor defend ourselves from it.

We cannot protect ourselves from threats we refuse to recognize. When you speak of theory development in consciousness studies, the standard model of consciousness that universities are being asked to produce will rewrite human history and change our view of religion and gender. Theory development must take this and the urgency to do it into its equation, which means this needs to be funded now—right now.

So, we have addressed the extra-terrestrials.

The transdimensionals are another type of problem

There are other ways we are being attacked, and we can defend ourselves if we understand how.

“Alpha waves in the human brain are between 6 and 8 hertz. The wave frequency of the human cavity resonates between 6 and 8 hertz. All biological systems operate in the same frequency range. The human brain’s alpha wave functions in this range and the electrical resonance of the earth is between 6 and 8 hertz. Thus, our entire biological system-the brain, and the earth itself-work on the same frequencies. If we can

control that resonate system electronically, we can directly control the entire mental system of humankind.”
Nikola Tesla.

In the science of Cognition, we are piercing a dimensional wall. The Science of Reincarnation is becoming a real and valid study in data management. Our collective understanding of this higher dimensional state which we all can individually access is not yet explained effectively, and so information on alien presence is best managed. The technology transfer that is occurring is far ahead of our understanding of the scientific and political ramifications.

This explanation of consciousness needs to evolve. When one remote viewer views something, then ten do a better job. Global consciousness is better still regarding understanding Extraterrestrial Intelligence and Extra Dimensional Intelligence and its exploration.

We are remote viewing the universe. Look to the organization this builds that can be used in the open for intelligence activities. At that point, you are establishing a center at the University of Arizona Consciousness Center run by Nobel Prize winner Stuart Hameroff that lays out an intergalactic welcome mat, and we look not with ten remote viewers but ten million. While we do this, we must acknowledge that we can be attacked along the same pathways, and local religious zealots feed on our not teaching globally an idea that limits their influence.

In short, *The Standard Model of Consciousness* is a scientific explanation of their belief system that supports it and expands it to the point that religious differences cease to be meaningful in the larger algorithm. With one book written by the best global scientists, you take down religious zealotry in the next generation and reduce the “noise” that allows the misinformation that manipulates us as a species.

Look at what NASA is asking us, the people, to do. We all have asks, it seems. This is from the NY Times.

Want to listen to space noise? NASA wants to hear from you.

“Note to citizen scientists: NASA wants your help listening in on the universe — specifically, on the sounds of low-frequency waves generated by solar particles colliding with “Earth’s magnetic environment.”

The goal is for volunteers to assist the space agency’s scientists in identifying important features within the cacophony.

Heliophysics Audified: Resonances in Plasmas (HARP) is now open to citizen scientists. HARP uses data from five NASA satellites that launched in 2007 to help study auroras, which occur when solar particles run into Earth’s bubblelike magnetic field, or [magnetosphere](#)...

Think listening to years’ worth of wave patterns is a job for artificial intelligence? Think again. In a [news release](#), HARP team member Martin Archer of Imperial College London says humans are often better at listening than machines.

“The human sense of hearing is an amazing tool,” Archer says. “We’re essentially trained from birth to recognize patterns and pick out different sound sources. We can innately do some pretty crazy analysis that outperforms even some of our most advanced computer algorithms.”

If you’d like to hear the sounds of solar wind and more, and to contribute to the project, visit [Listen.spacescience.org](https://listen.spacescience.org).ⁱⁱⁱ

I say this to NASA, and I say it with love. Give me a break. The outline here in this paper is to give you more resources and institutionalize it with a global network centered in Arizona. People cannot remote view into

the cosmos without a clearer and more precise understanding of their own consciousness, ergo, *The Standard Model of Consciousness*. Now you are not just listening like you are asking but actually looking. To do this, you must own up to the shit that went down over the last 75 years. Keep your secrets. This is not about prying into your files; it is about trying to save humanity and

1-you need help

2-we want to help

3-The 2000 billionaire control half the world's wealth that can, through this proposal, be actionably accessed and filtered through the best minds we have

4-it can work for all of us.

So, there you go, NASA. Best of luck.

For the rest of us, this simple explanation has more than just global defense consequences. It has political and social consequences.

This model of consciousness supports the O.W. Holmes theory of freedom of speech in that repeated and public lies do real societal harm and are, therefore, subject to prosecution under the law. O.W. Holmes and the common mind and Fox and OAN lies and can be successfully scientifically challenged in a court of law

LGBTQ is now scientifically valid, and opponents like JK Rowling and any school district that shares her views are scientifically invalid, and damages can be assessed in a court of law and can be scientifically challenged in a court of law.

Transdimensional understanding begins with the science of reincarnation, which supports belief in every religion's afterlife as a scientific model and is managed by data management.

If someone asks you what the science of reincarnation says, "It is as simple as uploading and downloading information to the cloud and putting it on another device. All of us are information. That information is written in your DNA and in your body's energy. Once we can process the amount of information in us, and that is not far off, we will have pierced the dimensional wall between us and heaven. Psychics, remote viewers, and mediums do it all the time. This is just the scientific explanation of what they do and the landscape they operate on and one that most people already believe."

The very study of information topology in formalizing this method of data management undercuts scientifically religious nationalism in all places this science goes.

When you evaluate the science of reincarnation, look at the political ramifications of changing belief to understanding. It begins with understanding our own consciousness, which changes the rules by which we make judgments. Change that paradigm, and you change humanity.

This idea gives you great political leverage while at the same time opening the playing field for our own intelligence services because it becomes a force multiplier. The intelligence community is sewn into this structure at the very beginning, and while alien to human technology is ongoing, what lags behind is the human community's ability to deal with it. This structure proves heaven, but dynamics change with a 4th-dimensional understanding. In terms of politics, there are not many religious denominations; they are all part

of a common denomination. This leaves religion in place, and family traditions are honored, but there are no longer borders. This can be accomplished by funding the proposals attached.

In a very real way, *the Standard Model of Consciousness* that scientists are being asked to write becomes the scientific bible of the new age.

In terms of theory development, sociologically, we are better able to defend ourselves with our new cohesiveness. It is harder to insert false information packages. But then the cosmos opens.

By expanding the conduit, the aliens have established with crop circle communication; we connect with an interstellar race that lives on three different planets in their solar system.

With humanoid populations on Mars and our Moon, our solar system is similar, and we just are becoming aware of it. This proposal in formalizing the study is to study consciousness, our own is development, and how other more advanced societies developed safely and cohesively. The study of our consciousness can be found in our actions.

This paper, at its core, is about opening a second channel to the universe beyond NASA and establishes the right of all humans to communicate with the universe to listen and learn. NASA has formalized the request for us to listen; they cannot stop us from learning. It is not one channel that will open; it will be many. We can help each other. How is that for theory development?

ⁱ *The Mathematics of the Science of Reincarnation Bob Good p5*

ⁱⁱ Want to listen to space noise? NASA wants to hear from you.

NY Times By Erin Blakemore April 23, 2023, at 6:00 a.m. EDT

The Institute for Advanced Consciousness Studies

TIFACS.org

Proposal #8

Empiricism

Funding a cohesive program of consciousness study and its application to societal laws

The second area where an infusion of funding would be important is experimental research. While the number of researchers engaged in empirical parapsychology has always been rather small, as a group, they have been remarkably persistent, competent, and productive. A half-dozen classes of psi experiments have reached a stage of maturity where methods to replicate effects can be described in straightforward terms, and replications should be encouraged as teaching tools. Part of the funding, then, would create teaching systems to help students replicate experiments known to be successful. This would include, for example, hardware and software for a digital Ganzfeld telepathy system and setups to allow for psychophysiological experiments such as presentiment (unconscious precognition)—the feeling of being stared at from a distance—and brain-to-brain correlations. These teaching systems would be made available at low or no cost for educational institutions and online for no cost.

The rest of the funding would fall into two categories. The first is directed multiyear programs. These would be experimental programs requiring a minimum of three-to-five-year effort, with the research team identified and invited by a steering committee of experienced researchers. Longer-term programs, those of up to ten years, would also be considered, depending on the nature of the proposed programs, the track records of the proposers, and the judgment of the steering committee. Second, an international grants program will solicit requests for proposals. These will be offered annually, with a maximum of \$100,000 per grant. There is no lack of interest among researchers interested in studying psi phenomena, but the range of experiments that have been conducted to date has just scratched the surface. With an infusion of funds, the scope of phenomena studied will creatively explode. Besides experimental tests of elementary psychic phenomena, including telepathy, clairvoyance, precognition, and psychokinesis, this effort would significantly expand research on survival-oriented phenomena, including mediumship, channeling, near-death and out-of-body experiences, and reincarnation.

In addition, a worldview survey can be undertaken to find exceptional talents (children and adults) to study, and in future efforts, the experimental program can be integrated with these talented individuals. This effort is estimated to cost about \$100 million, with most of the funds going to the long-term and solicited grants program and supporting the positions required to administer and track those grants.

—Dean Radin *The Mathematics of the Science of Reincarnation*

Simply put, empiricism is the idea that all learning comes from only experience and observations. The term “empiricism” comes from the Greek word for experience: *emporia*. The theory of empiricism attempts to explain how human beings acquire knowledge and improve their conceptual understanding of the world.

I ask the billionaires: Do we have the balls to believe our own eyes?

The proof is in the liars across all spectrums of this information; in fact, if I were to do an odds-against-chance calculation of Lazar, Aldrin, MUFON, Greer, and others all telling the same lie, I would arrive at a certainty despite the denials. This being the case, the Grays have reincarnation technology. Now I ask all billionaires: Now, what are you going to do?

Collective consciousness and global geopolitical cohesion equate to a global intergalactic strategy. Consciousness underpins our entry into the universe. This is empiric in its call to humanity as well as to our alien neighbors.

If everyone is lying, Lazar, Hyneck, Greer, etc., then I think a Jedi master is telling me that these are not the droids I am looking for. In short, we are being bamboozled.

While Dean speaks directly about research, the fact is that the derivatives need funding or the research dies.

Empiricism comes down to what you believe. Did the math here make sense?

So is this presentation true? This document uses discredited sources, certainly ones that have come under heavy criticism—Salla, Brown, and Greer, to name three. But there are others like Buzz Aldrin and James Mitchell who are trusted sources and provide corroborated facts.

There is one other category that can provide you with the truth: yourself. You look at the news and the videos and the firsthand accounts, and we can say with certainty that not only are aliens here, but they are among us. Watch the night skies.

This document, then, is not meant to prove they are here but to form a plan of what to do about it. Here is a general letter to send out.

An open letter to all billionaires

Dear Sir/Madame;

This cover letter is meant to introduce you to an effort funding consciousness science according to the attached plan for \$450 million. There are ten of you being asked to contribute \$50 million dollars each to this effort. Additionally, each of you is being asked to participate as a curator for one part of the overall effort. This cover letter will explain what is being asked of each of you, why you specifically are being asked, where the money is to be spent, and who is involved. It will also explain tangible products that will benefit you individually and personally. This begins with three empirically proven discoveries not yet processed or understood due to their transcendent ramifications.

1. We have scientifically proven a continuity of consciousness after bodily death.
2. We have scientifically proven the existence of alien life and visitors who trans navigates our airspace and oceans and whose presence is current and continual.
3. There are transdimensional beings who live on or frequent planet Earth. Anything humans do to harm the planet harms their environment.

You may disagree with all three premises, but the empirical proof is yours to examine. Fifty million dollars is small enough from each of you, but your participation makes this a cohesive whole in terms of an intelligent, collective, and measured response. Some may not wish to participate; these positions may be taken by other

billionaires. It is not just the money you are being asked for; it is your participation/guidance on various aspects of how we, as a species, should respond to this new information.

Each of the recipient organizations, most of which are 501(c)(3)s and specific individuals within, are given “asks,” producing a collective intellectual ask overall, with each having part of the whole. Individually many may come to this project reluctantly or not even know of it. But they will come because, like the ask of yours, it is the right thing to do.

Given the size of the money and distribution of it in this proposal, some of you are being asked up front to fund various projects and some of you are being asked to contact specific individuals to discuss where said contributed money should best be dispersed. Each of you donors will have specific targets within the overall plan based on your exhibited talents and interests.

In summation, you—the money—are joining the talent—the scientists—to form a team to produce the most effective response humanity can have to the new conditions that are emerging, proving continuity of consciousness after death and aliens frequenting our planet.

The following will introduce you to the other invited donors and the subsequent proposals of how to begin this effort, along with a short summary of purpose for each.

Your first question may well be: What does the afterlife have to do with aliens? Each are fractals of nonlocal consciousness. Consciousness is what we are proposing to study. Telepathy, clairvoyance, out-of-body experiences, and the afterlife are all fractals of our personal connection to cosmic communication, which is a data acquisition multiplier. The business and military applications are transcendent, they are next generation and beyond, and some aspects of this proposal will look to commercialize them.

Truth: These proposals are about funding, where it should be applied, and how it should be applied.

The science of reincarnation is a methodology that operates at all levels of magnitude of consciousness. Data transfer is what it is called for inert data. For consciousness uploads, we reincarnate to a new device, and it is the energy and not the device that is cognizant.

What would you be investing in?

- Bio transfer technology
- A spaceport in Arizona

- Changing Humanity

These proposals are some of the applications of the science of reincarnation, not just on a personal level but on a societal level. The empirical truth is that if we do not evolve, we will die. To poison the planet is to poison ourselves. The empirical truth is that investing in this plan is investing in your future.

The Institute for Advanced Consciousness Studies

TIFACS.org

Proposal #9

Conclusion

Funding a cohesive program of consciousness study and its application to societal laws

Summary

An estimated total cost for the proposed program is about \$450 million for the first year, dropping to perhaps \$100 million each successive year. This is nowhere near \$1 billion per year, and for good reason. At this stage of our knowledge, it is very unlikely that \$1 billion could be spent wisely. A program audit and reassessment would be planned on a five-year basis to judge if funds spent so far were used well and would recommend adjustments up or down. A question not yet addressed in this moon-shot proposal is whether a single overarching organization would be in charge of the whole program or whether it would be distributed among several organizations. In either case, the overhead in running and tracking a \$100–\$450 million program is nontrivial. It would require a staff of perhaps twenty people, which would cost perhaps \$5 million per year. Still, compared to an annual billion-dollar allocation, that would be in the noise.

—Dean Radin, *The Mathematics of the Science of Reincarnation*

So let us put this final summary/conclusion to this thesis. Its pertinent points are as follows.

What I Am Asking of Robert Bigelow

In its simplest form, I am asking Robert Bigelow to do a mailing campaign to 2,000 billionaires, asking them to contribute money to consciousness research. To start, we need \$450 million. The money is to be distributed by and through the consciousness center at the University of Arizona to the consortium to which it belongs. Additionally, money will be allocated for distribution through the panel of judges that Robert Bigelow assembled for his writing contest. The vehicle I wish for him to use is TIFACS, the Institute for Advanced Consciousness Studies, which already has the website and web presence to manage such an endeavor. Mr. Bigelow will support this in word only, but we are requesting he funds the staff to send out the letters and see that the donations are managed by Hameroff.

That is all I ask for him to do. But he can do more. The money is minimal and irrelevant; I am asking for his leadership. This is team building, and others will come after him. The job is to build the best model for humanity, given our reality. If reincarnation and interstellar travel are seventy years off, by our model, what then?

So, the invitees are slotted into positions within the plan and are tasked with choosing and grooming their successor and not succumbing to beliefs.

The benefit of discoveries made by NASA, like the microwave which is ubiquitous in every kitchen, make money improve the world so we can fund even more and employ more.

Each should read the other's proposal to get an overall scope.

Everyone needs to get comfortable and understand their role. Each of us has our own plan within larger plans. It is intricate and multifaceted. It will take time to emerge. As it does, our own understanding of what is being offered will mature. Give this time; once we understand consciousness better, so much will change for the better.

So, Mr. Bigelow, I would like you and I to go on a fishing expedition. Send out letters asking for a \$5 million founder's donation to be run by you and Dr. Hameroff. Sending to 2,000 billionaires with a .03 return rate would equal sixty (2000 x .03). Multiple that by \$5 million and it would be \$300 million to start with. So as a test, put that request letter from your organization to all 2,000 billionaires, including Putin. Make the ask for \$50 million, and you start with \$3 billion. You can do this; you can make this happen; you can change the world.

We want to build a consortium of billionaires to fund the consortium of consciousness researchers, starting with an opening tranche of \$450 million. That is \$50 million from nine billionaires or \$5 million from ninety billionaires. The plan's entire run is \$200 billion dollars. That is \$100 million from each of the 2,000 billionaires in the world.

The plan will be run by TIFACS, which is to say it will be run by the scientists and billionaires themselves.

It is critical that this plan be undertaken immediately due to dangers, threats, and opportunities that are just coming to light. The preponderance of very credible information indicates that aliens are present on Earth, and multiple species of aliens are living on Earth with competing agendas. They are more advanced than we are and can use their consciousness to control our own.

The US government has incontrovertible evidence of this and has kept this from the American people because there is nothing they can do about it. During its run, this plan would seek to end the bifurcation within the US government. The public sector, as represented by the potential investment from all the billionaires, would support government research and development in both defense and economic opportunities that would result from both the investment in and the declassification of scientific information obtained by our intelligence agencies.

This thesis centers around one thing: human consciousness. We are approaching a pivotal moment for humanity. We must stop destroying ourselves and each other, which means we must change how our leaders think and act. Not doing so leaves us vulnerable to the types of catastrophes that have befallen other species or leaves us as prey to the alien species all around us that we are too afraid to acknowledge.

The Veracity of This Proposal—You Can Check the Sources

This is as true as the situation twenty years ago. Things are progressing. Let's assume the authorities did not tell the general population about this because they were scared shitless and could not do anything about the situation and the power derived from retro-engineering alien technology. If deals are being made in the back rooms, a situation could occur where it would not be the first time a human has sold another human into slavery.

There can be a lot of bad endings for those who prefer fairytales and ignorance—even the well-intentioned intelligence service needs to come in from the cold.

The real test is in how we organize going forward, given how this changes everything.

Where are the aliens? In 3D or 4D, this question needs two answers.

In 4D, we need to fund the 4D apps using AI, which is already being done at the CIA, among others.

In 3D, the mission is already probably planned. RAIV is already happening. DNA modification using CRISPR is ongoing.

If the intelligence services/CIA do not include the collective human mind in the operation, it wastes the greatest resource humanity has.

Wouldn't you like to inform people of what science says? The standard model of consciousness will do that and change our views of death, religion, and gender.

The resultant change in global politics should be managed toward commercialization and common safety, but there are devils in the details.

Aliens will benefit as well.

We are all in this together—all of us and the aliens.

This is only about consciousness.

This needs funding now.

The discussion has already begun.

And so ends this proposal. Now let us all step back away from it. At its core, it has made accessible to our intelligence and government leaders half of the world's wealth.

Once TIFACS is actuated, there is a second proposal for this. That is The International Association for the Science of Reincarnation (IASOR, IASOR.org).

This is open to everyone for free. But it accesses the other half of the world's wealth. The two together represent a common consciousness. Every sect, every color, every race, and every gender, is included. Space is open to everyone. How much deeper into the universe could NASA see if they could harness this power? How we are received by races thousands of years more developed than us will be based on how we treat each other here on Earth.

Appendix
Copyright
Copyright letter

In order to stay within copyright rules, I used the following guidelines I obtained from the internet.

For all quotes, I stayed within the American Psychological Association guideline with three exceptions.

What is the amount and substantiality of the material used? The American Psychological Association allows authors to cite 400 words in single-text extracts, or 800 words in a series of text extracts, without permission (American Psychological Association, 2010).

How long can a quote be without permission?

Unfortunately, quoting or excerpting someone else's work falls into one of the grayest areas of copyright law. There is no legal rule stipulating what quantity is OK to use without seeking permission from the owner or creator of the material. Sep 17, 2020

For Ingo Swann and Dr. Salla, and Dr. Courtney Brown, I use the principle of fair use.

Fair use

The distinction between fair use and infringement may be unclear and not easily defined. There is no specific number of words, lines, or notes that may safely be taken without permission. Acknowledging the source of the copyrighted material does not substitute for obtaining permission.

When it is impracticable to obtain permission, use of copyrighted material should be avoided unless the doctrine of fair use would clearly apply to the situation. The Copyright Office can neither determine if a certain use may be considered fair nor advise on possible copyright violations

Do I Need Permission to Cite That? The Fair-Use Rule in U.S. Copyright Law Kathleen Kendall-Tackett, Ph.D., IBCLC, RLC, FAPA Whether you are writing an article or a book, at some point, you will need to cite someone else's work. When do you need to get permission from the original author or copyright holder? U.S. copyright law ensures that authors' expressions are protected. That means if you are using an author's exact phrasing or sequence of words to express an idea, then you need permission to cite more than what can be considered "fair use." According to the fair-use rule, authors may make limited use of others' material without permission. But the guidelines for what constitutes fair use are much vaguer than you might suspect. Indeed, fair use is considered an "affirmative defense," meaning that the burden of proof is on you to demonstrate that your use of the author's materials falls within in these guidelines. There are four guidelines to help you determine whether something falls under fair use.

“Not in the List” Countries

- **Taiwan**—the United Nations considers it represented by the People’s Republic of China.
- **The Cook Islands** and **Niue**—both states in free association with New Zealand, which are members of several UN-specialized agencies and have been recognized “full treaty-making capacity,” but are neither member states nor non-member observer states.
- **Dependencies** (or dependent territories, dependent areas, dependencies) and Areas of Special Sovereignty (autonomous territories).

- **Other countries** recognized by the United Nations as not being self-governing.

Where are they located?

- 54 countries are in Africa
- 48 in Asia
- 44 in Europe
- 33 in Latin America and the Caribbean
- 14 in Oceania
- 2 in Northern America
